3. The following changes are proposed:
 - (a) Revision of the grouping characteristics in chapter 5.3
 - (b) Deletion of characteristics 38 to 47 "Resistance to *Bremia lactucae* (Bl) Isolates Bl:16EU to BL:27EU"
 - (c) Revision of characteristic and explanation Ad. 55 "Resistance to *Fusarium oxysporum* f.sp. *lactucae* (Fol) Race 1"
 - (d) Addition of new characteristic "Resistance to *Fusarium oxysporum* f.sp. *lactucae* (Fol) Race 4" at the end of the table of characteristics
 - (e) Changes to the Technical Questionnaire
4. The proposed changes are presented below in highlight and underline (insertion) and ~~striketrough~~ (deletion).

11. Observations

11.1 Method

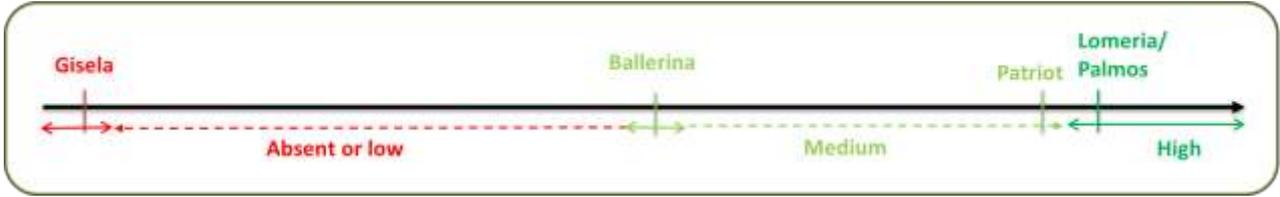

visual and/or counting number of plants with symptom.

11.2 Observation scale

inoculation by soaking seedlings	
0: plant without symptoms and healthy vessels	 A photograph of a healthy green seedling with a dark brown root system, showing no signs of disease.
1: plant with brown vessels only below the cotyledon without yellowing and wilting	 A photograph of a seedling with a small stem. A red double-headed arrow points to a dark brown, necrotic area on the stem just below the cotyledon.
2: plant with brown vessels above the cotyledon, without yellowing and wilting	 A photograph of a seedling with a stem showing a dark brown, necrotic area on the stem above the cotyledon.
3: plant yellowing and wilting, brown vessels	 A photograph of a seedling that is significantly yellowed and wilted, with dark brown necrotic areas on the stem.
4: dead plant	 A photograph of a dead, brown, and fragmented plant lying on a surface of dark soil.

11.3 Validation of test

results should be compared with results of controls and are depending of the aggressiveness of the test and the distribution of the plants over the categories.

12. Interpretation of data in terms of UPOV characteristic states

compare the distribution over the categories with the result of the controls.
