

**Fernando Ardila**

Fernando Ardila, a national of Argentina, holds a B.Sc. in biological sciences and a Ph.D. in chemistry in the area of enzymology from University of Buenos Aires. He conducted post-doctoral research activities on plant physiology and molecular biology at Nagoya University, Japan. Back to his country, he joined *Instituto Nacional de Tecnología Agropecuaria* (INTA), a federal institution of agrosience technology where he carried out research activities on plant biotechnologies, leading a research group and becoming, later, responsible of the research strategy of a team of five hundreds researchers on biotechnology and genetic resources, for several years, until recently. Technologies and market issues found him involved in intellectual property studies, area where, at present, he conducts research activities, collaborates with government offices and teaches at two universities.
