I. Subject of these Guidelines

These Test Guidelines apply to all vegetatively propagated varieties of *Vitis* L. including rootstock and ornamental varieties.

II. Material Required

1. The competent authorities decide when, where and in what quantity and quality the plant material required for testing the variety is to be delivered. Applicants submitting material from a State other than that in which the testing takes place must make sure that all customs formalities are complied with. As a minimum, the following quantity of plant material is recommended:

15 plants on their own roots.

2. In the case of a variety with roots sensitive to *Phylloxera vastatrix* scions should be grafted on a rootstock variety not being sensitive to that pest selected by the competent authorities. If accepted by the competent authority, the applicant could exceptionally submit scions for grafting, sufficient to propagate 15 plants (to be sent at grafting time) or 15 plants on their own roots. If accepted by the competent authority, in some special cases, also plants grown in cardboard pots or peat pots can be used. Plant material from *in vitro* propagation should only be submitted if agreement from the competent authority has been obtained beforehand. The plant material supplied should be visibly healthy, not lacking in vigor or affected by any important pests or diseases.

3. The plant material must not have undergone any treatment unless the competent authorities allow or request such treatment. If it has been treated, full details of the treatment must be given.

III. Conduct of Tests

1. To assess distinctness it is essential that the plants under test should produce at least two satisfactory crops of fruit.

2. The tests should normally be conducted at one place. If any important characteristics of the variety cannot be seen at that place, the variety may be tested at an additional place.

3. The tests should be carried out under conditions ensuring normal growth. The size of the plots should be such that plants or parts of plants may be removed for measurement and counting without prejudice to the observations which must be made up to the end of the growing period. Each test should include a total of 15 plants. Separate plots for observation and for measuring can only be used if they have been subject to similar environmental conditions.

4. Additional tests for special purposes may be established.

IV. Methods and Observations

1. All observations should be made on 10 plants or parts taken from 10 plants.
2. For the assessment of uniformity a population standard of 1% with an acceptance probability of at least 95% should be applied. In the case of a sample size of 10 plants, the maximum number of off-types allowed would be 1.
3. Unless otherwise indicated, all observations on the shoot should be made in the middle third of the shoot. All observations on the mature leaf should be made on leaves in the middle third of the shoot just above the raceme.
4. Wherever possible, all characteristics on the bunch and the berry should apply also to varieties not for fruit production.

V. Grouping of Varieties

1. The collection of varieties to be grown should be divided into groups to facilitate the assessment of distinctness. In the first place the collection should be divided into varieties for fruit production and not for fruit production.
2. In addition, characteristics which are suitable for grouping purposes are those which are known from experience not to vary, or to vary only slightly, within a variety. Their various states of expression should be fairly evenly distributed throughout the collection. It is recommended that the competent authorities use the color of the skin of the berry (characteristic 41) for grouping varieties.

VI. Characteristics and Symbols

1. To assess distinctness, uniformity and stability, the characteristics and their states as given in the Table of Characteristics should be used.
2. Notes (numbers), for the purposes of electronic data processing, are given opposite the states of expression for each characteristic.
3. The indication of a species or a group of varieties in the column "Example Varieties" indicates that the majority of the varieties—but not necessarily all varieties—of this species or group show the state of expression of that characteristic.
4. For the example varieties—other than rootstocks—after the name of the variety the color of the berry is indicated, following the standardized code used by the European Union for the European classification of vine varieties: B = white, G = grey, N = black, Rg = red, Rs = rose. Synonyms of certain example varieties used are indicated at the end of Chapter VIII before the table with the growth stages.
5. In a special column for each characteristic are indicated the code numbers of the OIV and IPGRI of the corresponding characteristic in the Descriptor list for grapevine varieties and

Vitis species, drawn up jointly by the OIV (International Office of the Vine and Wine, 18, rue d'Aguesseau, 75008 Paris, France), IPGRI (International Plant Genetic Resources Institute, Via delle Sette Chiese 142, 00145 Rome, Italy) and UPOV, in order to avoid risks of mistakes and errors resulting from the multiplicity and heterogeneity of existing lists of distinctive characteristics. In addition, for each characteristic, a code is indicated for the stage of development at which observations should be made. The code is taken from the table: "Encoding and description of the phenological stages of the grapevine according to the extended BBCH scale" reproduced at the end of Chapter VIII.

6. Legend

(*) Characteristics that should be used on all varieties in every growing period over which examinations are made and always be included in the variety descriptions, except when the state of expression of a preceding characteristic or regional environmental conditions render this impossible.

(+) See Explanations on the Table of Characteristics in Chapter VIII.

¹⁾ The optimum stage of development for the assessment of each characteristic according to the BBCH Code as well as the codes for characteristics used by the OIV (O-...) and the IPGRI (I-...) are indicated by numbers in the second column. The stages of development denoted by a number of the BBCH Code are described at the end of Chapter VIII.

VIII. Explanations on the Table of Characteristics

Ad. 3 to 6: Young shoot: tip (part in squares to be observed)

Ad. 4, 5 and 6: Young shoot: density of prostrate hairs on tip (4), anthocyanin coloration of prostrate hairs on tip (5) and (Only varieties not for fruit production) density of erect hairs on tip (6)

Wide open or fully open tips (characteristic 3) to be observed with inclusion of first 2 distal unfolded leaves. Leaves of closed, slightly open or half open tips to be unfolded to enable observations on corresponding part of tip.

Ad. 7: Young leaf: color of upper side of blade

Observation on first 2 distal unfolded leaves in case of closed, slightly open or half open tips (characteristic 3). Observation on first 4 distal unfolded leaves in case of wide open or fully open tips.

Ad. 8 and 9: Young leaf: density of prostrate hairs (8) and erect hairs (9) between main veins on lower side of blade

Observation on second distal unfolded leaf in case of closed, slightly open or half open tips (characteristic 3). Observation on fourth distal unfolded leaf in case of wide open or fully open tips.

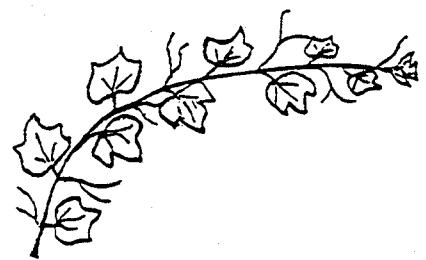

Ad. 10: Shoot: attitude (before tying)

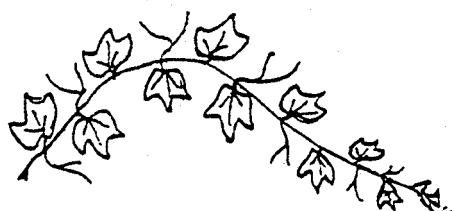

1
erect

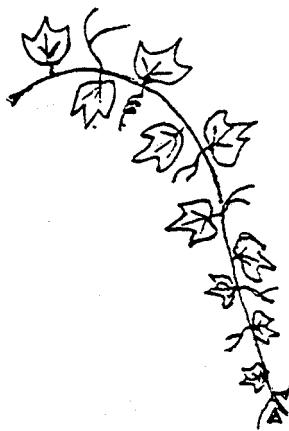

3
semi-erect

5
horizontal

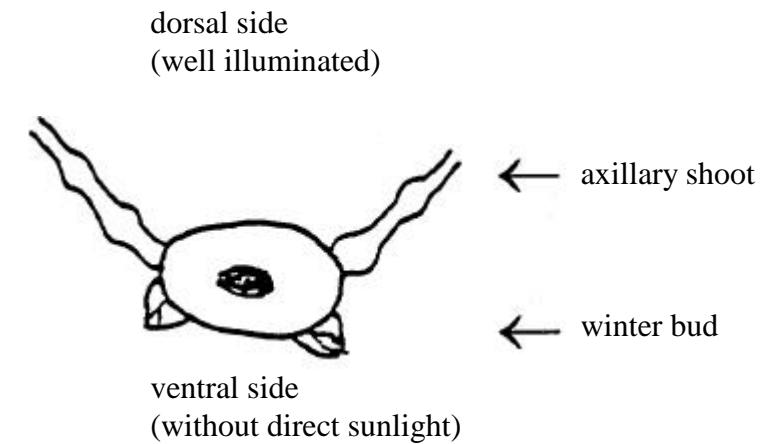

7
semi-drooping

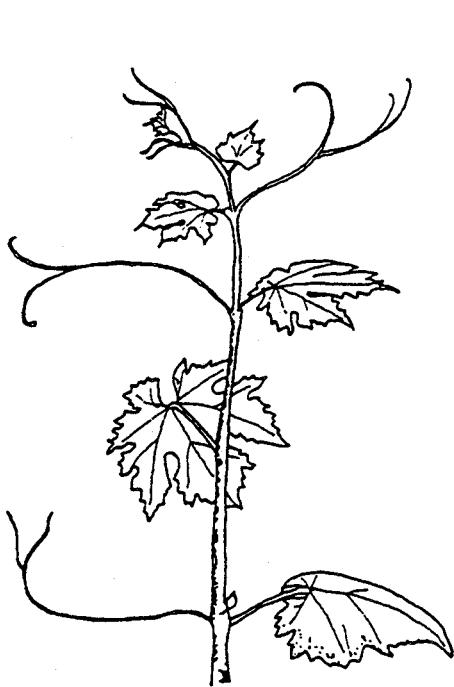

9
drooping

Ad. 11 to 14: Shoot: dorsal/ventral side

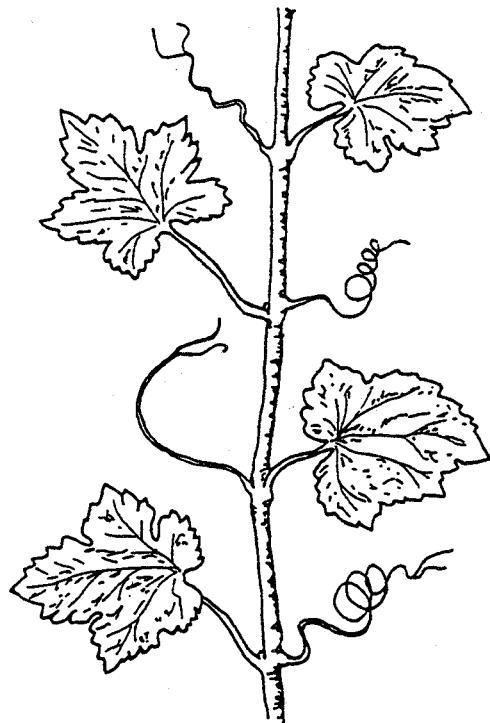

Cross section of shoot

Ad. 16: Shoot: number of consecutive tendrils

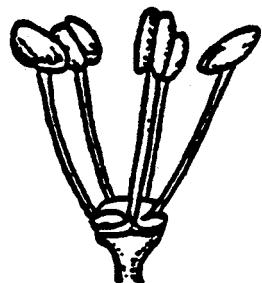

1
less than three

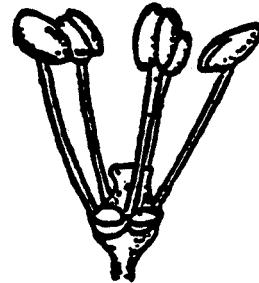

2
three or more

Ad. 18: Flower: sexual organs

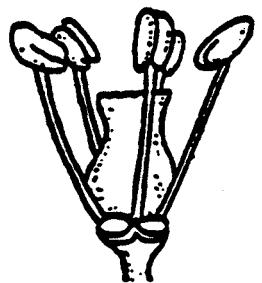

1

fully developed stamens
and no gynoecium

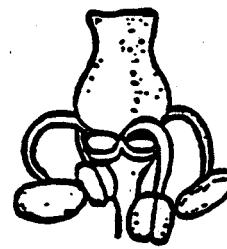

2

fully developed stamens
and reduced gynoecium

3

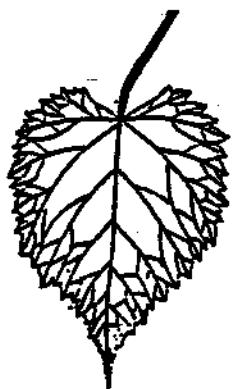

fully developed stamens
and fully developed gynoecium

4

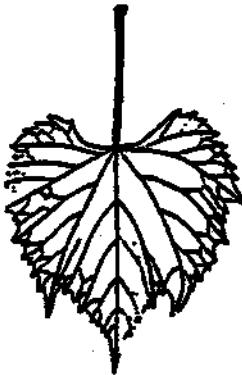

reflexed stamens
and fully developed gynoecium

Ad. 20: Mature leaf: shape of blade

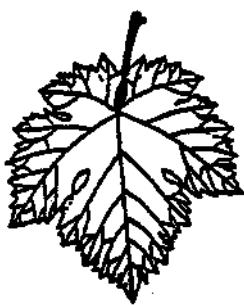

1

cordate

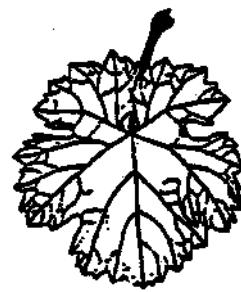

2

deltoid

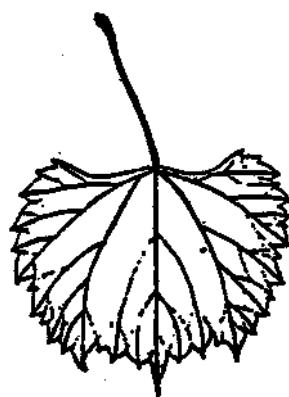

3

pentagonal

4

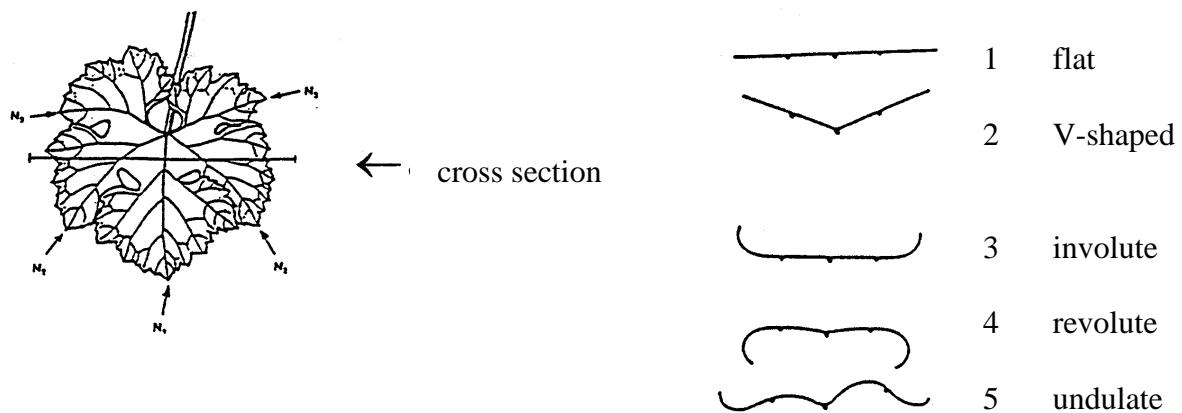

orbicular

5

reniform

Ad. 21: Mature leaf: profile in cross section

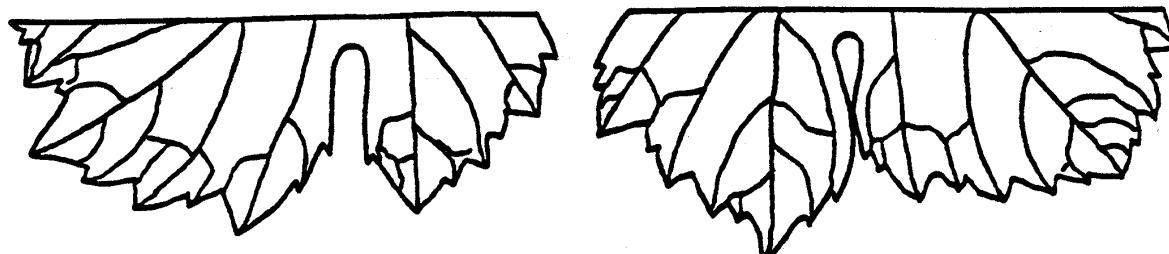

Ad. 23: Mature leaf: number of lobes

A lobe is that part of the leaf which lies between two leaf sinuses. A leaf sinus results from a clear interruption of teeth on the leaf margin.

Ad. 24 and 25: Mature leaf: upper lateral sinuses

A sinus results from a clear interruption of teeth on the leaf margin. The upper lateral sinuses are situated between the middle vein and the next lateral main vein.

Ad. 25: Mature leaf: arrangement of lobes of upper lateral sinuses

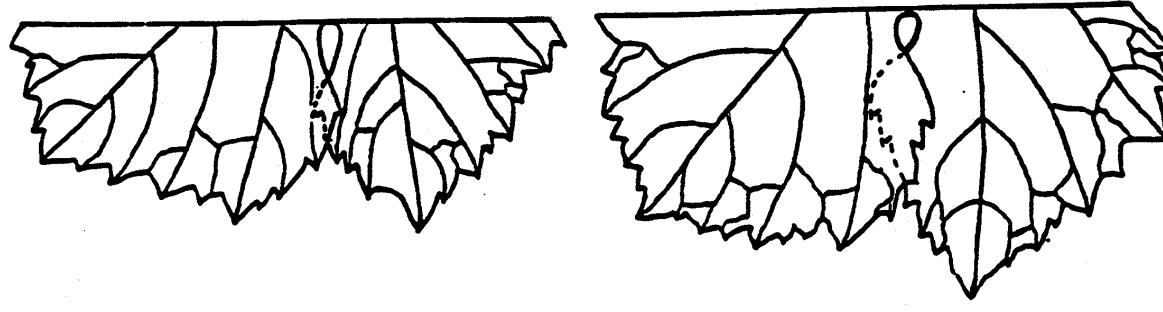

1

open

2

closed

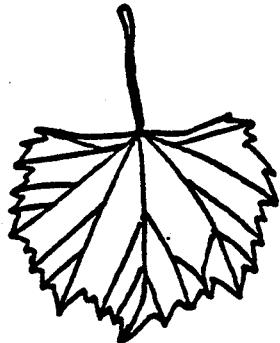

3

slightly overlapped

4

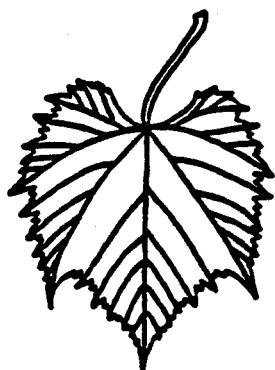

strongly overlapped

Ad. 26: Mature leaf: arrangement of lobes of petiole sinus

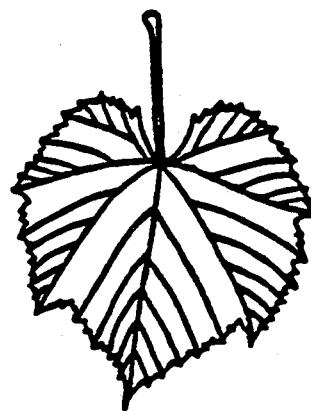

1

very wide open

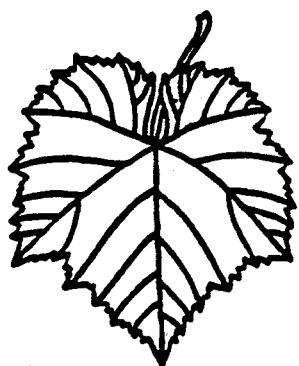

2

wide open

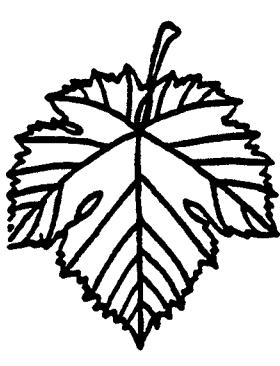

3

half open

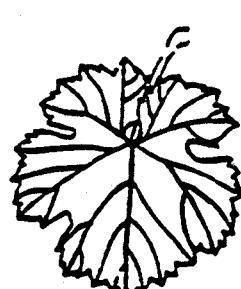

4

slightly open

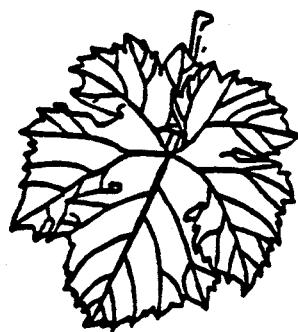

5

closed

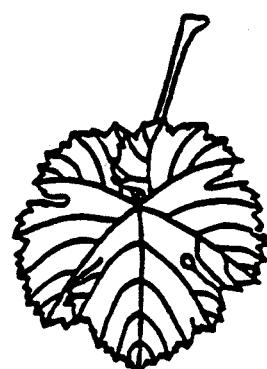

6

slightly overlapped

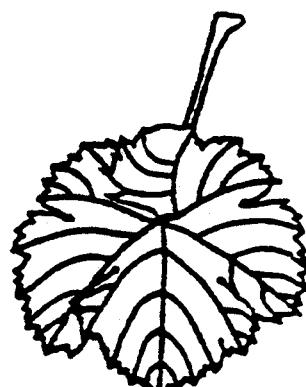

7

half overlapped

8

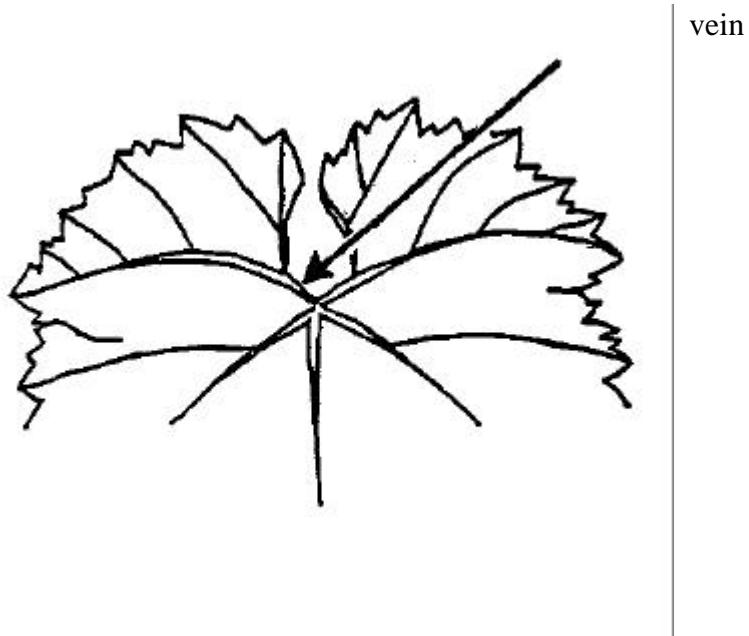

strongly overlapped

9

very strongly overlapped

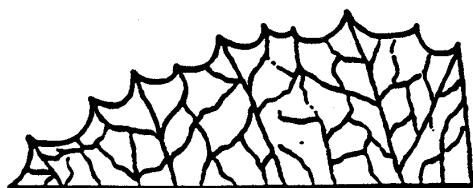

Ad. 27: Mature leaf: petiole sinus limited by veins

Ad. 28 - 30: Mature leaf: teeth

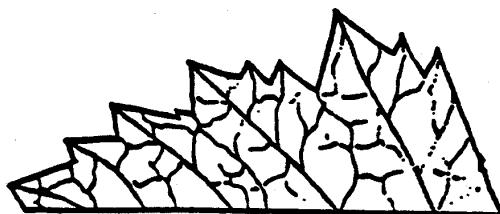

All observations should be made between lateral main veins on the teeth of secondary veins.

Ad. 30: Mature leaf: shape of teeth

1

both sides concave

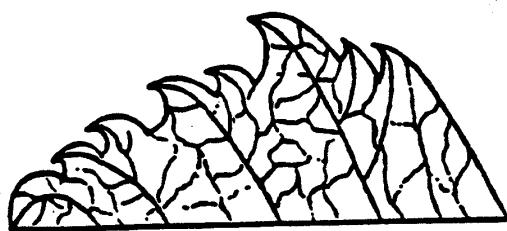

2

both sides straight

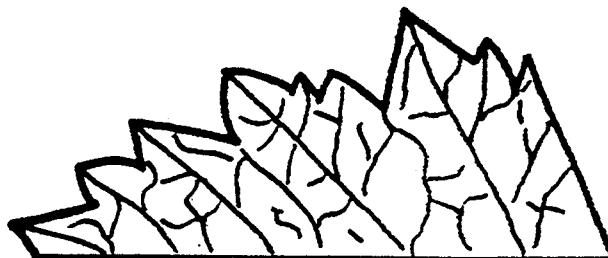

3

both sides convex

4

one side concave, one side convex

5

mixture of both sides straight and
both sides convex

Ad. 35: Only varieties for fruit production: Time of berry ripening (veraison)

About 50% of berries start getting soft.

Ad. 37: Bunch: density

1 = berries in grouped formation, many visible pedicels

3 = single berries, some pedicels visible

5 = densely distributed berries, pedicels not visible, berries movable

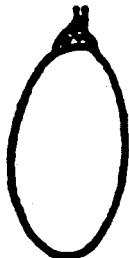

7 = berries not readily movable

9 = berries pressed out of shape.

Ad. 40: Berry: shape in profile

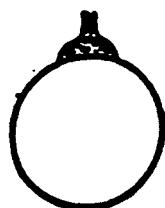

1
oblong

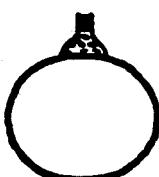

2
elliptic

3
broad elliptic

4
circular

5
oblate

6
ovate

7
obtuse ovate

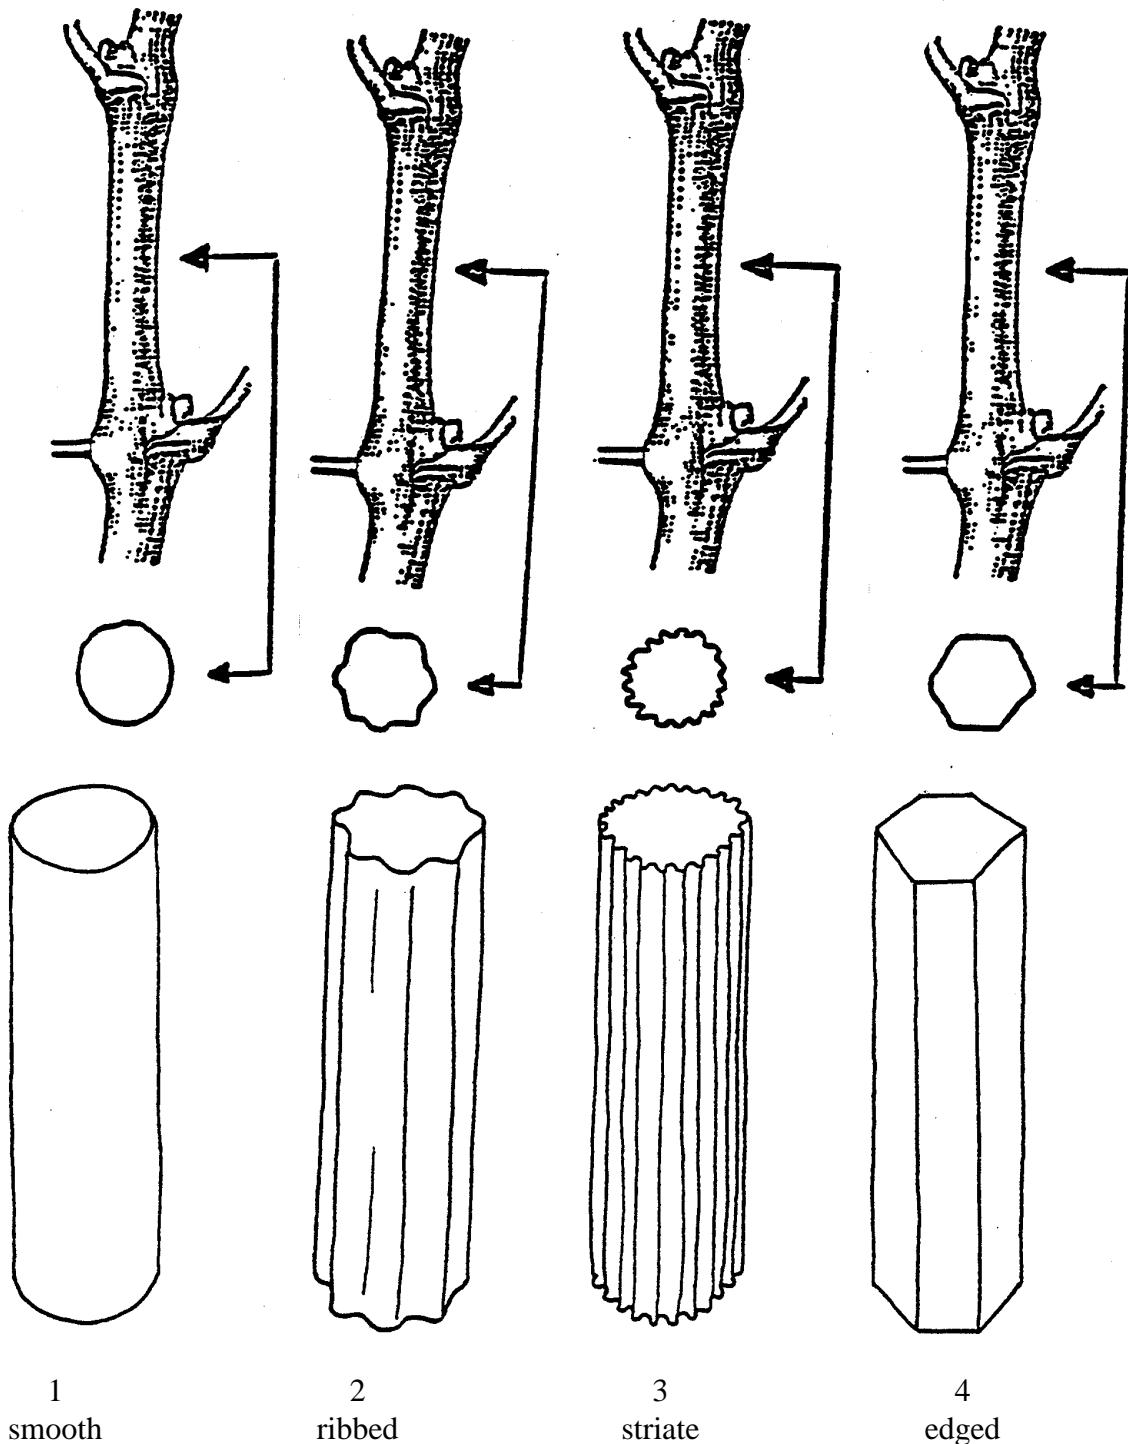

8
obovate

9
corniform

Ad. 50: Woody shoot: relief of surface

Synonyms for Certain Example Varieties Used

Example Varieties	Synonyms
Blauer Portugieser N	Portugais bleu
Chasselas blanc B	Weisser Gutedel
Chasselas rose Rs	Roter Gutedel
Corinthe noir N	Black Corinth, Corinto nero, Korinthiaki
Gewürztraminer Rs	Roter Traminer, Traminer aromatico
Grenache noir N	Garnacha tinta
Meunier N	Müllerrebe, Pinot meunier
Müller Thurgau B	Rivaner
Muscat blanc B	Gelber Muskateller, Moscato bianco, Muscat à petits grains blancs
Muscat d'Alexandrie B	Hanepoot, Zibibbo
Palomino fino B	Listan
Perle de Csaba B	Csaba gyöngye
Pinot gris G	Grauburgunder, Pinot grigio, Ruländer
Pinot noir N	Blauer Spätburgunder, Pinot nero
Primitivo N	Zinfandel
Riesling B	Riesling renano, Rheinriesling, Weisser Riesling
Sultanina B	Sultana, Thompson Seedless, Sultanine B
Sylvaner B	Grüner Silvaner
Ugni blanc B	Trebbiano toscano

Encoding and Description of the Phenological Stages of Grapevine According to the Extended BBCH Scale¹

BBCH-Code	Description
Principal growth stage 0	Sprouting
00	Dormancy: winter buds pointed to rounded, bright or dark brown according to cultivar, bud scales more or less closed according to cultivar
01	Beginning of bud swelling: buds begin to expand inside the bud scales
03	End of bud swelling: buds swollen, but not green
05	“Wool stage”: brown wool clearly visible
07	Beginning of bud burst: green shoot tips just visible
09	Bud burst: green shoot tips clearly visible
Principal growth stage 1	Leaf development
11	First leaf unfolded and spread away from shoot
12	Two leaves unfolded
13	Three leaves unfolded
14	Four leaves unfolded
15	Five leaves unfolded
16	Six leaves unfolded
19	Nine or more leaves unfolded
Principal growth stage 5	Inflorescence emergence
53	Inflorescences clearly visible
55	Inflorescences swelling, flowers closely pressed together
57	Inflorescences fully developed, flowers separating
Principal growth stage 6	Flowering
60	First flowerhoods detached from the receptacle
61	Beginning of flowering: 10% of flowerhoods fallen
63	Early flowering: 30% of flowerhoods fallen
65	Full flowering: 50% of flowerhoods fallen
68	80% of flowerhood fallen
69	End of flowering
Principal growth stage 7	Development of fruits
71	Fruit set: young fruits begin to swell, remains of flowers lost
73	Berries groat-sized, bunches begin to hang
75	Berries pea-sized, bunches hang
77	Beginning of berry touch
79	Berry touch completed
Principal growth stage 8	Ripening of berries
81	Beginning of ripening: berries begin to brighten in color
83	Berries brightening in color
85	Softening of berries
89	Berries ripe for harvest
Principal growth stage 9	Senescence
91	After harvest: end of wood maturation
92	Beginning of leaf discoloration
93	Beginning of leaf-fall
95	50% of leaves fallen
97	End of leaf-fall
99	Post-harvest treatments

¹ The code has been jointly developed by *Biologische Bundesanstalt für Land- und Forstwirtschaft (BB)*, *Bundessortenamt (BSA)* and *Industrieverband Agrar (IVA)* in cooperation with *Staatliche Lehr- und Forschungsanstalt für Landwirtschaft, Wein und Gartenbau (SLFA)*, Section Plant Pathology, Neustadt/Weinstraße. Published in Lorenz et al., 1994 (see Literature).

X. Technical Questionnaire

	Reference Number (not to be filled in by the applicant)
TECHNICAL QUESTIONNAIRE to be completed in connection with an application for plant breeders' rights	
1.1 Genus	<i>Vitis</i> L. GRAPEVINE
1.2 Species	<i>Vitis vinifera</i> L. [] Other [] (indicate species)
2. Applicant (name and address)	
3. Proposed denomination or breeder's reference	

4. Information on origin, maintenance and reproduction of the variety

4.1 Origin

(a) Seedling of unknown parentage []

(b) Produced by controlled pollination []
(indicate parent varieties)

– Seed bearing parent (indicate parent)
.....

– Pollen parent (indicate parent)
.....

(c) Produced by open pollination of []
(indicate seed bearing parent plant)
.....

(d) Mutation or sport from (indicate original parent variety)

..... []

(e) Discovery (indicate where and when)

..... []

4.2 Method of reproduction

– cuttings []

– *in vitro* propagation []

– other (please specify) []
.....

4.3 Virus status

Mother plants of the variety:

- (a) The variety is free from all known viruses as follows: []
(indicate from which viruses)

.....

- (b) The plant material is virus tested []
(indicate against which viruses)

.....

- (c) The virus status is unknown []

Mother plants of rootstock in case of grafted plants:

- (a) The variety is free from all known viruses as follows: []
(indicate from which viruses)

.....

- (b) The plant material is virus tested []
(indicate against which viruses)

.....

- (c) The virus status is unknown []

4.4 Other information

5. Characteristics of the variety to be indicated (the number in brackets refers to the corresponding characteristic in Test Guidelines; please mark the state of expression which best corresponds).
