GUIDELINES

FOR THE CONDUCT OF TESTS

FOR DISTINCTNESS, UNIFORMITY AND STABILITY

AMARYLLIS

(Hippeastrum Herb.)

These Guidelines should be read in conjunction with document TG/1/2, which contains explanatory notes on the general principles on which the Guidelines have been established.

IX. Literature	12
X. Technical Questionnaire	13

I. Subject of these Guidelines

These Test Guidelines apply to all vegetatively propagated varieties of *Hippeastrum* Herb. of the family Amaryllidaceae.

II. Material Required

1. The competent authorities decide when, where and in what quantity and quality the plant material required for testing the variety is to be delivered. Applicants submitting material from a State other than that in which the testing takes place must make sure that all customs formalities are complied with. As a minimum, the following quantity of plant material is recommended:

20 bulbs of flowering size.

2. The plant material supplied should be visibly healthy, not lacking in vigor or affected by any important pests or diseases. It should preferably not be obtained from *in vitro* propagation.

3. The plant material must have been stored at a minimum temperature of 13-15°C during a minimum period of 6-8 weeks otherwise the material must not have undergone any treatment unless the competent authorities allow or request such treatment. If it has been treated, full details of the treatment must be given.

III. Conduct of Tests

1. A test should normally be conducted for one growing period. If distinctness and/or uniformity cannot be sufficiently established in one growing period, the test should be extended for a second growing period.

2. The tests should normally be conducted at one place. If any important characteristics of the variety cannot be seen at that place, the variety may be tested at an additional place.

3. The tests should be carried out under the following growing conditions:

Temperature: Bulb temperature between 20-22°C
(soil heating 20-22°C)

Planting time: December – January (Northern Hemisphere)

Substrate: Plain soil

Planting distance: 30 bulbs per m²

Fertilization: E.C. 1.5-2, standard solution

Irrigation: 5 to 6 mm daily: preferably drip system

The size of the plots should be such that plants or parts of plants may be removed for measurement and counting without prejudice to the observations which must be made up to the end of the growing period. Each test should include a total of 20 plants. Separate plots for observation and for measuring can only be used if they have been subject to similar environmental conditions.

4. Additional tests for special purposes may be established.

IV. Methods and Observations

1. All observations should be made on 20 plants. All observations determined by measurement or counting should be made on 10 plants or parts taken from each of 10 plants.
2. For the assessment of uniformity a population standard of 1% and an acceptance probability of at least 95% should be applied. In the case of a sample size of 20 plants, the maximum number of off-types allowed would be 1.
3. All observations should be made on plants that have fully opened flowers.
4. Unless otherwise indicated, all observations on the flower should be made shortly after anther dehiscence.
5. Because daylight varies, color determinations made against a color chart should be made either in a suitable cabinet providing artificial daylight or in the middle of the day in a room without direct sunlight. The spectral distribution of the illuminant for artificial daylight should conform with the CIE Standard of Preferred Daylight D 6500 and should fall within the tolerances set out in British Standard 950, Part I. These determinations should be made with the plant part placed against a white background.

V. Grouping of Varieties

1. The collection of varieties to be grown should be divided into groups to facilitate the assessment of distinctness. Characteristics which are suitable for grouping purposes are those which are known from experience not to vary, or to vary only slightly, within a variety. Their various states of expression should be fairly evenly distributed within the collection.
2. It is recommended that the competent authorities use the following characteristics for grouping varieties:
 - (a) Flower: type (characteristic 7)
 - (b) Flower: maximum width of perianth (characteristic 13)
 - (c) Flower: main color of inner side (characteristic 17) with the following groups:
 - Gr. 1: white
 - Gr. 2: yellow
 - Gr. 3: salmon
 - Gr. 4: light pink
 - Gr. 5: pink
 - Gr. 6: red
 - Gr. 7: dark red

VI. Characteristics and Symbols

1. To assess distinctness, uniformity and stability, the characteristics and their states as given in the Table of Characteristics should be used.
2. Notes (numbers), for the purposes of electronic data processing, are given opposite the states of expression for each characteristic.
3. Legend:
 - (*) Characteristics that should be used on all varieties in every growing period over which examinations are made and always be included in the variety descriptions, except when the state of expression of a preceding characteristic or regional environmental conditions render this impossible.
 - (+) See Explanations on the Table of Characteristics in Chapter VIII.

VII. Table of Characteristics/Tableau des caractères/Merkmalstabelle/Tabla de caracteres

English	français	deutsch	español	Example Varieties Exemples Beispielssorten Variedades ejemplo	Note/ Nota

VIII. Explanations on the Table of Characteristics

Ad. 8: Flower: shape of petaloid staminodes (double flowers only)

1
regular

2
irregular

IX. Literature

ALFABETISCHE LIJST van de in Nederland in cultuur zijnde AMARYLLIS (*Hippeastrum*) CULTIVARS (Alphabetic list of Amaryllis varieties grown in the Netherlands), Koninklijke Algemeene Vereeniging voor Bloembollencultuur, Hillegom, 1980, NL.

X. Technical Questionnaire

	Reference Number (not to be filled in by the applicant)
<p>TECHNICAL QUESTIONNAIRE to be completed in connection with an application for plant breeders' rights</p>	
1. Species	<p><i>Amaryllis (Hippeastrum Herb.)</i> AMARYLLIS</p>
2. Applicant (Name and address)	
3. Proposed denomination or breeder's reference	

4. Information on origin, maintenance and reproduction of the variety

4.1 Origin

(a) Seedling (indicate parent varieties)

..... []

(b) Mutation (indicate parent variety)

..... []

(c) Discovery (indicate where and when)

..... []

(d) Other (specify)

..... []

4.2 Method of reproduction

- by incisions []

- *in vitro* propagation []

- other (state method) []

4.3 Other information

5. Characteristics of the variety to be indicated (the number in brackets refers to the corresponding characteristic in Test Guidelines; please mark the state of expression which best corresponds).

Characteristics	Example Varieties	Note
5.1 Flower: type (7)		
single	Orion	1[]
double	White Peacock	2[]
5.2 Flower: maximum width of perianth (13)		
narrow	Pink Floyd	3[]
medium	Masai	5[]
broad	Maria Theresa	7[]
5.3i Flower: main color of inner side (17)		
RHS Colour Chart (indicate reference number)		
5.3ii Flower: main color of inner side (17)		
white	Ludwig Dazzler	1[]
yellow	Lemon Lime	2[]
salmon	Rilona	3[]
light pink	Apple Blossom	4[]
pink	Pink Perfection	5[]
red	Red Lion	6[]
dark red	Midnight	7[]

6. Similar varieties and differences from these varieties

Denomination of similar variety	Characteristic in which the similar variety is different ^{o)}	State of expression of similar variety	State of expression of candidate variety
---------------------------------	--	--	--

^{o)} In the case of identical states of expressions of both varieties, please indicate the size of the difference.

7. Additional information which may help to distinguish the variety

7.1 Resistance to pest and diseases

7.2 Special conditions for the examination of the variety

7.3 Other information

A representative color photo of the variety should be added to the Technical Questionnaire.
