INTERNATIONAL UNION FOR THE PROTECTION OF NEW VARIETIES OF PLANTS

GENEVA

COUNCIL**Twenty-fourth Ordinary Session
Geneva, October 18 and 19, 1990****PROGRESS REPORT ON THE WORK OF THE TECHNICAL COMMITTEE AND
THE TECHNICAL WORKING PARTIES**prepared by the Office of the Union**TECHNICAL COMMITTEE**

1. Pursuant to the decision taken by the Council at its twenty-third ordinary session, the twenty-sixth session of the Technical Committee will take place on October 11 and 12, 1990, in the week preceding that of the forthcoming ordinary session of the Council. A progress report on the twenty-fifth session of the Technical Committee is reproduced in document C/XXIII/10 Add.2. A progress report on the forthcoming session of the Technical Committee will be given either orally during the ordinary session of the Council or in an addendum to the present document. Thus, as far as the Technical Committee is concerned, the present document deals mainly with its program for the twenty-sixth session.

2. The twenty-sixth session of the Committee is to take place on October 11 and 12, 1990, in Geneva. It is planned that the following business be conducted during the session: Progress Reports on the work of the Technical Working Parties; reports on the stage of preparation of the revision of the UPOV Convention; discussion of questions raised by the Technical Working Parties; discussion of new methods, techniques and equipment in the examination of varieties; discussions on cooperation with breeders in the testing of varieties; discussions on the question of minimum distances between varieties; definition and examination of hybrid varieties. In addition, the Technical Committee will have to take decisions on the following Test Guidelines, which will be submitted by the Technical Working Parties for final adoption:

TG/4/6(proj.) Ryegrass (Revision)
TG/11/5(proj.) Rose (Revision)
TG/25/6(proj.) Carnation (Revision)
TG/30/5(proj.) Bent (Revision)
TG/33/5(proj.) Kentucky Bluegrass (Revision)
TG/49/5(proj.) Carrot (Revision)
TG/52/3(proj.) Red and white currant (revision)
TG/54/5(proj.) Brussels Sprouts (Revision)
TG/96/1(proj.) Norway Spruce
TWO/XXIII/2 Lachenalia
TWO/XXIII/3 Leucadendron
TWO/XXIII/4 Leucospermum
TG/130/2(proj.) Asparagus
TG/131/1(proj.) Chincherinchee
TG/132/1(proj.) Dieffenbachia
TG/133/1(proj.) Hydrangea
TG/134/2(proj.) Safflower
TG/135/1(proj.) Spathiphyllum
TG/136/1(proj.) Parsley

TECHNICAL WORKING PARTIES

3. The Technical Working Party for Fruit Crops will hold its twenty-first session in Tsukuba, Japan, from September 10 to 17, 1990, and the Technical Working Party for Ornamental Plants and Forest Trees will hold its twenty-third session in Tokyo, Japan, from September 16 to 24, 1990. The progress reports on these two sessions will be given in an addendum to the present document. The Technical Working Party for Fruit Crops plans to conduct the following business during its session: final discussions on revised draft Test Guidelines for Red and White Currant; minimum distances between varieties; color observations; new methods, techniques and equipment in the examination of varieties; statistical methods; discussions on working papers on Test Guidelines for Blueberry, Citrus (Revision), Jostaberry, Lingonberry, Prunus Rootstocks, Apricot (Revision), Pear (Revision). The Technical Working Party for Ornamental Plants and Forest Trees plans to conduct the following business: color observations; new methods, techniques and equipment in the examination of varieties; micropropagation; cooperation with breeders in the testing of varieties; minimum distances between varieties; final discussions on draft Test Guidelines for Rose (Revision), Carnation (Revision), Chrysanthemum (Revision), Norway Spruce, Lachenalia, Leucadendron, Leucospermum, Chincherinchee, Dieffenbachia, Hydrangea, Spathiphyllum; discussions of working papers on Test Guidelines for Lily (Revision), Pyracantha, Weigela, Aster, Iris, Rhododendron (Revision). A progress report on the above-mentioned two sessions will be given either orally during the coming Council session or in an addendum to the present document.

Progress Report on the Work of the Technical Working Party for Agricultural Crops (TWA)

4. The Technical Working Party for Agricultural Crops (TWA) held its nineteenth session in Wageningen, The Netherlands, under the chairmanship of Dr. Camlin, GB, from May 15 to 17, 1990. The full report on that session appears in document TWA/XIX/9 Prov. During the session, the TWA completed its discussions on the revision of the draft Test Guidelines for Bent, for Ryegrass and for Kentucky Bluegrass (Smooth-Stalked Meadow Grass) and on new draft Test Guidelines for Safflower, which will be presented to the Technical Committee for final adoption. It left the further discussions on the revision of the Test Guidelines for Peas to the Technical Working Party for Vegetables.

0 24/10

It referred the discussions on the revision of the Test Guidelines for Rape back to a subgroup. It discussed the drafts for revised Test Guidelines for Wheat, Barley and Oats, but will await the outcome of the discussions on Electrophoresis before proceeding with their further revision. In addition to the discussions on Test Guidelines, the TWA discussed or rediscussed the following other subjects:

(i) the possibilities of more intensive cooperation with breeders in the testing of varieties which it will continue, and

(ii) the different notions of variety for rape (pure line variety, open pollinated variety, synthetic variety, hybrid variety), on which discussions will be continued in a subgroup.

5. The TWA also noted the report from the Subgroup Meeting on Electrophoresis in Cereals, held at the same place on May 14. During that meeting, the experts from the professional organizations mentioned the following arguments against the possible introduction of electrophoresis as a routine test: electrophoresis would not be a finger printing method, it could slow down breeding speed, it would change the type of varieties (100% pure lines) and it would increase the cost of breeding, seed certification and seed production. The Subgroup agreed to continue its discussions with the aim of introducing electrophoresis as a non-routine characteristic the use of which could be requested by the applicant if other characteristics failed to establish distinctness. It was considered necessary to standardize the approach within UPOV member States, to define the precise wording of the characteristics, to stabilize the technique and to standardize the interpretation. A further subgroup of the subgroup will meet to prepare detailed explanations on the methods and their application and to try to reach an agreed interpretation of the results. This would include agreement on whether to use a well defined absence/presence of bands or of patterns, a definition of the term "well defined" and a draft of the wording of the characteristics to be included in the cereal Test Guidelines.

6. The twentieth session of the TWA is scheduled to be held in Beltsville, United States of America, either from May 13 to 17 or from May 20 to 24, 1991. A Subgroup on Rape will meet on April 3 and 4, 1991, at Scharnhorst (Federal Republic of Germany). The Subgroup of Electrophoresis for cereals will meet on October 16 and 17, 1990, in Surgères (France). The TWA planned to note and discuss during its next session the reports of the above-mentioned subgroups, and to start work on revised or new Test Guidelines for Maize (Revision), Flax (Revision) and Fodderbeet. Discussions on the following items are also planned: new methods, techniques and equipment in the examination of varieties, access to data of data bases of UPOV member States, cooperation with breeders in the testing of varieties. The latter item may also be discussed in a special meeting with breeders on the occasion of the coming session.

Report on the Progress of Work of the Technical Working Party on Automation and Computer Programs (TWC)

7. The Technical Working Party on Automation and Computer Programs (TWC) held its eighth session in Belfast (United Kingdom) from June 6 to 8, 1990, under the chairmanship of Dr. Laidig (DE). The detailed report on that session is reproduced in document TWC/VIII/13 Prov. At its eighth session, the TWC discussed or rediscussed the following items and took the following decisions:

(i) It continued its evaluation of the Combined Over-Years (COY) analysis. Experts will explain further the program to the crop experts. All will try and apply it to further species;

(ii) It developed further its program for the calculation of Long-Term LSD from past data for tests with few varieties;

(iii) It continued its discussions on the Combined Over-Years Uniformity (COU) criterion and will search for the right probability levels for a smooth transition from the present to the new criterion;

(iv) It discussed proposals for a Common Data Structure for data from electrophoresis tests and will ask the TWA and TWV to comment on that structure;

(v) It discussed programs to choose most similar varieties to a given candidate variety and will prepare a document to be sent to the Technical Committee and the other Technical Working Parties for comments;

(vi) It continued its discussions on standardized variety descriptions and asked the TWV to comment on the document prepared for the selection of example varieties for Peas. It will prepare a similar document for the selection of cereals example varieties;

(vii) It saw no urgent need for on-line access to technical data in the computers of other national offices. The main problem would be the insecurity as to the status of the accessed information.

(viii) It will try and facilitate the exchange of information in electronic form and, as a start, will develop an electronic format for published variety descriptions to facilitate the incorporation of variety descriptions transmitted in electronic form directly into another computer. It also asked for comments concerning a project for a DUS Logical Data Structure;

(ix) It continued updating its list of programs which can be readily assimilated into other plant variety computer systems;

(x) It discussed at length the difference between minimum distance and the calculation of LSD. It will prepare a document with explanations for the other Technical Working Parties to comment on;

(xi) It agreed to review the documents on statistical methods discussed in the past, so that newcomers would be assisted in their understanding of the work and achievements of the TWC;

(xii) It proposed to the Technical Committee to recommend to the Council that Mr. K. Kristensen (Denmark) be elected as chairman for the next three years.

8. The ninth session of the TWC will be held at La Minière, France, from May 29 to 31, 1991. At that session, the TWC plans to discuss or rediscuss the following items: Combined Over-Years (COY) analysis; testing of crossfertilized plants for homogeneity by Combined Over-Years Uniformity (COU) analysis; common structure for data from electrophoresis or other new methods; description of varieties (similar varieties; selection of example varieties); access to international data; programs that can be readily assimilated into other plant variety computer systems of the Offices of member States; review of statistical documents; minimum distances between varieties.

Progress Report on the Work of the Technical Working Party for Vegetables (TWV)

9. The Technical Working Party for Vegetables held its twenty-third session in Les Vignères, Cavaillon near Avignon, France, from July 2 to 6, 1990, under the chairmanship of Mr. R. Brand (France). The full report on that session is reproduced in document TWV/XXIII/22 Prov. The TWV completed its discussions on revised Test Guidelines for Brussels Sprout and for Carrot and on new Test Guidelines for Asparagus and for Parsley, which will now be presented to the Technical Committee for final adoption. It furthermore discussed revised draft Test Guidelines for Tomato and a working paper on Test Guidelines for Watermelon. These Test Guidelines will require, however, further discussion during the coming session. In addition to the discussions on Test Guidelines, the TWV discussed or rediscussed several other subjects with the following results:

- (i) It discussed the difficulties arising in the DUS testing of Tomato, where a first application concerning a vegetatively propagated tomato resulting from tissue culture had been made. It will ask the Technical Committee how to proceed in these cases, as plant material from tissue culture, despite its identical genetic structure, would show different expressions in several characteristics;
- (ii) It discussed the problems of variety denominations in the classes 5 and 6 of the UPOV Recommendations on Variety Denominations and proposed to the Technical Working Party for Agricultural Crops to discuss the possibility of combining these two classes into one class for all Brassica and a separate class for Sinapis. If the TWA agrees to that proposal, it will be presented to the Technical Committee in 1991;
- (iii) It noted that the EEC had finalized its re-inscription of 111 old umbrella varieties by splitting several of them into different varieties.
- (iv) It discussed the newly adopted technical questionnaire and will propose to the Technical Committee a further amendment in paragraph 7;
- (v) It agreed that certain data should be available on-line to offices of other member States and will inform the Technical Committee on the reasons and on the desired data;
- (vi) It discussed the difficulties in the application of the COY-analysis to vegetable species and will inform the Technical Committee of its position;
- (vii) It took the decision that, whenever the Test Guidelines established by it are silent on the parameters defining the sample scheme, that would mean that the acceptance probability of results from measured characteristics would be 99% with a population standard of 1%, as indicated in Table 11 of document TC/XXV/8;
- (viii) It had a first discussion, which will be continued, on documents TWC/VIII/14 with explanations on minimum distances, and TWA/XIX/8 Rev. on technical issues arising from the revision of the UPOV Convention;
- (ix) It agreed on the treatment of the testing of resistance against Bremia lactucae in lettuce;
- (x) It had a long discussion on different problems connected with the testing of resistance and will present certain problems to the Technical Committee and prepare further general discussions on the testing of diseases;

0654

C/24/10
page 6

(xi) It will collect information on all resistance characteristics in national lists of varieties for two selected species (Tomato and French Bean) to get improved information on resistance testing;

(xii) It discussed the use of electrophoresis in the testing of vegetable species and will continue its discussions on two selected species (Asparagus and Pea).

(xiii) It proposed to the Technical Committee to recommend to the Council that Mr. J.L. Evans (United Kingdom) be elected as the new chairman.

10. The twenty-fourth session of the TWV is scheduled to be held in Hanover, Federal Republic of Germany, from June 4 to 7, 1991, unless the TWV receives an invitation to meet in Hungary. During the coming session, it is planned that the Test Guidelines for Tomato (Revision) and for Pea (Revision) should be completed prior to their presentation to the Technical Committee for final adoption. It is also planned that working papers for Test Guidelines for the following species should be discussed or rediscussed: Cabbage (Revision), Broccoli, Cauliflower (Revision), Chick-pea, Cucumber, Gherkin (Revision), Cucurbita maxima, Cucurbita moschata, French Bean (Revision), Garlic, Lettuce (Revision), Onion (Revision), Shallot, Spinach (Revision), Watermelon, Witlof, Oenothera, Sweet Pepper (Revision). In addition, discussions on the following items are also planned: items for the Technical Working Party on Automation and Computer Programs; minimum distances between varieties; disease resistance characteristics; new methods, techniques and equipment in the examination of varieties.
