ORIGINAL: English

DATE: 2010-02-11

INTERNATIONAL UNION FOR THE PROTECTION OF NEW VARIETIES OF PLANTS

GENEVA

DRAFT

LILY

UPOV Code: LILIU

Lilium L.

GUIDELINES

FOR THE CONDUCT OF TESTS

FOR DISTINCTNESS, UNIFORMITY AND STABILITY

to be considered by the

*Technical Committee at its forty-sixth session,
to be held in Geneva from March 22 to 24, 2010*

Alternative Names:*

<i>Botanical name</i>	<i>English</i>	<i>French</i>	<i>German</i>	<i>Spanish</i>
<i>Lilium L.</i>	Lily	Lys	Lilie	Lily, azucena, lirio

The purpose of these guidelines (“Test Guidelines”) is to elaborate the principles contained in the General Introduction (document TG/1/3), and its associated TGP documents, into detailed practical guidance for the harmonized examination of distinctness, uniformity and stability (DUS) and, in particular, to identify appropriate characteristics for the examination of DUS and production of harmonized variety descriptions.

ASSOCIATED DOCUMENTS

These Test Guidelines should be read in conjunction with the General Introduction and its associated TGP documents.

* These names were correct at the time of the introduction of these Test Guidelines but may be revised or updated. [Readers are advised to consult the UPOV Code, which can be found on the UPOV Website (www.upov.int), for the latest information.]

1. Subject of these Test Guidelines

These Test Guidelines apply to all varieties of *Lilium* L.

2. Material Required

2.1 The competent authorities decide on the quantity and quality of the plant material required for testing the variety and when and where it is to be delivered. Applicants submitting material from a State other than that in which the testing takes place must ensure that all customs formalities and phytosanitary requirements are complied with.

2.2 In the case of vegetatively propagated varieties, the material is to be supplied in the form of bulbs of sufficient size to show full flowering in the first year (hybrids with an Oriental parent: circumference of 16-18 cm; all other types circumference of 14-16 cm). The bulbs should have only one vegetation point. In the case of seed-propagated varieties, the seed should have a germination capacity of at least 50%.

2.3 The minimum quantity of plant material, to be supplied by the applicant, should be:

vegetatively propagated varieties: 20 bulbs

seed-propagated varieties: 300 seeds

2.4 The plant material supplied should be visibly healthy, not lacking in vigor, nor affected by any important pest or disease.

2.5 The plant material should not have undergone any treatment which would affect the expression of the characteristics of the variety, unless the competent authorities allow or request such treatment. If it has been treated, full details of the treatment must be given.

3. Method of Examination

3.1 *Number of Growing Cycles*

The minimum duration of tests should normally be a single growing cycle.

3.2 *Testing Place*

Tests are normally conducted at one place. In the case of tests conducted at more than one place, guidance is provided in TGP/9 "Examining Distinctness".

3.3 *Conditions for Conducting the Examination*

3.3.1 The tests should be carried out under conditions ensuring satisfactory growth for the expression of the relevant characteristics of the variety and for the conduct of the examination.

3.3.2 Unless otherwise indicated, all observations should be made at the time of anther dehiscence of the first flower.

3.3.3 Because daylight varies, color determinations made against a color chart should be made either in a suitable cabinet providing artificial daylight or in the middle of the day in a

room without direct sunlight. The spectral distribution of the illuminant for artificial daylight should conform with the CIE Standard of Preferred Daylight D 6500 and should fall within the tolerances set out in the British Standard 950, Part I. These determinations should be made with the plant part placed against a white background.

3.4 *Test Design*

3.4.1 Each test should be designed to result in a total of at least 20 plants for vegetatively propagated varieties and 50 plants for seed-propagated varieties.

3.4.2 The design of the tests should be such that plants or parts of plants may be removed for measurement or counting without prejudice to the observations which must be made up to the end of the growing cycle.

3.5 *Number of Plants / Parts of Plants to be Examined*

3.5.1 Vegetatively propagated varieties: unless otherwise indicated, all observations on single plants should be made on 10 plants or parts taken from each of 10 plants and any other observations made on all plants in the test.

3.5.2 Seed-propagated varieties: unless otherwise indicated, all observations on single plants should be made on 30 plants or parts taken from each of 30 plants and any other observations made on all plants in the test.

3.6 *Additional Tests*

Additional tests, for examining relevant characteristics, may be established.

4. Assessment of Distinctness, Uniformity and Stability

4.1 *Distinctness*

4.1.1 General Recommendations

It is of particular importance for users of these Test Guidelines to consult the General Introduction prior to making decisions regarding distinctness. However, the following points are provided for elaboration or emphasis in these Test Guidelines.

4.1.2 Consistent Differences

The differences observed between varieties may be so clear that more than one growing cycle is not necessary. In addition, in some circumstances, the influence of the environment is not such that more than a single growing cycle is required to provide assurance that the differences observed between varieties are sufficiently consistent. One means of ensuring that a difference in a characteristic, observed in a growing trial, is sufficiently consistent is to examine the characteristic in at least two independent growing cycles.

4.1.3 Clear Differences

Determining whether a difference between two varieties is clear depends on many factors, and should consider, in particular, the type of expression of the characteristic being examined, i.e. whether it is expressed in a qualitative, quantitative, or pseudo-qualitative manner. Therefore, it is important that users of these Test Guidelines are familiar with the recommendations contained in the General Introduction prior to making decisions regarding distinctness.

4.2 *Uniformity*

4.2.1 It is of particular importance for users of these Test Guidelines to consult the General Introduction prior to making decisions regarding uniformity. However, the following points are provided for elaboration or emphasis in these Test Guidelines:

4.2.2 For the assessment of uniformity of vegetatively propagated varieties, a population standard of 1% and an acceptance probability of at least 95% should be applied. In the case of a sample size of 20 plants, 1 off-type is allowed.

4.2.3 The assessment of uniformity for seed-propagated varieties should be according to the recommendations for cross-pollinated varieties in the General Introduction.

4.3 *Stability*

4.3.1 In practice, it is not usual to perform tests of stability that produce results as certain as those of the testing of distinctness and uniformity. However, experience has demonstrated that, for many types of variety, when a variety has been shown to be uniform, it can also be considered to be stable.

4.3.2 Where appropriate, or in cases of doubt, stability may be tested, either by growing a further generation, or by testing a new seed or plant stock to ensure that it exhibits the same characteristics as those shown by the previous material supplied.

5. Grouping of Varieties and Organization of the Growing Trial

5.1 The selection of varieties of common knowledge to be grown in the trial with the candidate varieties and the way in which these varieties are divided into groups to facilitate the assessment of distinctness are aided by the use of grouping characteristics.

5.2 Grouping characteristics are those in which the documented states of expression, even where produced at different locations, can be used, either individually or in combination with other such characteristics: (a) to select varieties of common knowledge that can be excluded from the growing trial used for examination of distinctness; and (b) to organize the growing trial so that similar varieties are grouped together.

5.3 The following have been agreed as useful grouping characteristics:

- (a) Flower: attitude of perianth (excluding pedicel) (characteristic 15)
- (b) Flower: shape of perianth (excluding pedicel) (characteristic 16)
- (c) Flower: tepal: main color of central part (characteristic 19)
- (d) Flower: fragrance (characteristic 26)
- (e) Tepal: number of papillae and/or spots (characteristic 27)
- (f) Tepal: color of papillae and/or spots (characteristic 29)
- (g) Time of flowering (characteristic 40)

5.4 Guidance for the use of grouping characteristics, in the process of examining distinctness, is provided through the General Introduction.

6. Introduction to the Table of Characteristics

6.1 *Categories of Characteristics*

6.1.1 Standard Test Guidelines Characteristics

Standard Test Guidelines characteristics are those which are approved by UPOV for examination of DUS and from which members of the Union can select those suitable for their particular circumstances.

6.1.2 Asterisked Characteristics

Asterisked characteristics (denoted by *) are those included in the Test Guidelines which are important for the international harmonization of variety descriptions and should always be examined for DUS and included in the variety description by all members of the Union, except when the state of expression of a preceding characteristic or regional environmental conditions render this inappropriate.

6.2 *States of Expression and Corresponding Notes*

States of expression are given for each characteristic to define the characteristic and to harmonize descriptions. Each state of expression is allocated a corresponding numerical note for ease of recording of data and for the production and exchange of the description.

6.3 *Types of Expression*

An explanation of the types of expression of characteristics (qualitative, quantitative and pseudo-qualitative) is provided in the General Introduction.

6.4 *Example Varieties*

Where appropriate, example varieties are provided to clarify the states of expression of each characteristic.

6.5 *Legend*

(*) Asterisk characteristic – see Chapter 6.1.2

QL: Qualitative characteristic – see Chapter 6.3

QN: Quantitative characteristic – see Chapter 6.3

PQ: Pseudo-qualitative characteristic – see Chapter 6.3

8. Explanations on the Table of Characteristics

8.1 *Explanations covering several characteristics*

- (a) To be examined on middle third of the stem.
- (b) Observations should be made on outer tepals.
- (c) Observations on color should be made on the inner side of the inner tepal, excluding papillae, spots and nectar furrow.
- (d) Observations on papillae and/or spots and ribbing should be made on the inner side of the inner tepal.

8.2 *Explanations for individual characteristics*

Ad. 1: Plant height

To be observed from the soil level to the top of the inflorescence.

Ad. 4: Leaf: arrangement

Ad. 6: Leaf: width

The width of V-shaped leaves should be observed when held flat

Ad. 9: Leaf: cross section

Ad. 10: Flower bud: main color

The main color is the color with the largest surface area. The main color should be observed just before the opening of the flower.

Ad. 11: Inflorescence: type of branching

In the case of varieties with umbellate and racemose branching (note 2), the first (lowest) branches are umbellate and the upper (higher) branches are racemose.

Ad. 14: Flower type

1≤6 tepals should be described as single
7≤11 tepals should be classified as semi-double
≥12 tepals should be described as double

Ad. 15: Flower: attitude of perianth (excluding pedicel)

1
erect

2
erect to horizontal

3
horizontal (outward facing)

4
drooping

Ad. 16: Flower: shape of perianth (excluding pedicel)

Ad. 20: Tepal: main color of central part

Ad. 21: Tepal: main color of basal part

Ad. 22: Tepal: color of zone bordering on nectar furrow

Ad. 23: Tepal: main color of distal part

Ad. 24: Tepal: main color of marginal zone

Ad. 25: Tepal: main color of outer side of inner tepal

Ad. 26: Tepal: color of nectar furrow

The main color of a part or zone is the color with the largest surface area on the part or zone concerned.

Ad. 27: Tepal: number of papillae and/or spots

Ad. 28: Tepal: size of area with papillae and/or spots

Ad. 29: Tepal: color of papillae and/or spots

Papillae: pimples, with small, rounded, soft to firm, unequal bumps

Spots: small areas of another color than the background color

Ad. 31: Tepal: undulation of margin

3
weak

5
medium

7
strong

Ad. 32: Tepal: type of undulation of margin

1
fine only

2
coarse only

3
fine and coarse

Ad. 35: Stamen: main color of filament

The main color is the color with the largest surface area.

Ad. 40: Time of flowering

The time of flowering is when 50% of the plants have at least one open flower.

10. Technical Questionnaire

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
		Application date: (not to be filled in by the applicant)
TECHNICAL QUESTIONNAIRE to be completed in connection with an application for plant breeders' rights		
1. Subject of the Technical Questionnaire		
1.1 Botanical name	<input type="text" value="Lilium L."/>	
1.2 Common name	<input type="text" value="Lily"/>	
2. Applicant		
Name	<input type="text"/>	
Address	<input type="text"/>	
Telephone No.	<input type="text"/>	
Fax No.	<input type="text"/>	
E-mail address	<input type="text"/>	
Breeder (if different from applicant)	<input type="text"/>	
3. Proposed denomination and breeder's reference		
Proposed denomination (if available)	<input type="text"/>	
Breeder's reference	<input type="text"/>	

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

#4. Information on the breeding scheme and propagation of the variety

4.1 Breeding scheme

Variety resulting from:

4.1.1 Crossing

- (a) controlled cross []
(please state parent varieties)
- (b) partially known cross []
(please state known parent variety(ies))
- (c) unknown cross []

4.1.2 Mutation []
(please state parent variety)

4.1.3 Discovery and development []
(please state where and when discovered
and how developed)

4.1.4 Other []
(please provide details)

4.2 Method of propagating the variety

4.2.1 Vegetative propagation

- (a) scales []
- (b) *in vitro* propagation []
- (c) other (state method) []

4.2.2 Seed []

4.2.3 Other []
(please provide details)

Authorities may allow certain of this information to be provided in a confidential section of the Technical Questionnaire.

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

5. Characteristics of the variety to be indicated (the number in brackets refers to the corresponding characteristic in Test Guidelines; please mark the note which best corresponds).

Characteristics	Example Varieties	Note
5.1 Flower: attitude of perianth (excluding pedicel) (15)		
erect	Tresor	1[]
erect to horizontal	Siberia, Stargazer	2[]
horizontal (outward facing)	Casablanca, White Heaven	3[]
drooping	Galloway	4[]
5.2 Flower: shape of perianth (excluding pedicel) (16)		
trumpet	White Elegance	1[]
bowl	Siberia	2[]
flat	Sugar Jewel	3[]
recurved	Belletti	4[]
5.4 Flower: fragrance (17)		
absent or weak	Nemo	1[]
medium	Jetaime	2[]
strong	Saltarello	3[]
5.3 Tepal: main color of central part (20)		
RHS Colour Chart (indicate reference number)		
5.5 Tepal: number of papillae and/or spots (27)		
absent or very few	Siberia, White Europe	1[]
few	Vedea, Vermeer	3[]
medium	Purple Rain, Stargazer	5[]
many	Pink Mystery	7[]

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

Characteristics	Example Varieties	Note
5.6 Tepal: color of papillae and/or spots (29)		
white	Siberia	1[]
yellow	Conca d'Or	2[]
brown yellow	Windsor	3[]
brown	Fenice	4[]
red brown	Pirandello	5[]
pink	Camaiore	6[]
red	Nippon	7[]
purple red	Dizzy	8[]
5.7 Time of flowering (40)		
very early		1[]
early		3[]
medium	Vedea	5[]
late		7[]
very later	Mero Star	9[]

6. Similar varieties and differences from these varieties

Please use the following table and box for comments to provide information on how your candidate variety differs from the variety (or varieties) which, to the best of your knowledge, is (or are) most similar. This information may help the examination authority to conduct its examination of distinctness in a more efficient way.

Denomination(s) of variety(ies) similar to your candidate variety	Characteristic(s) in which your candidate variety differs from the similar variety(ies)	Describe the expression of the characteristic(s) for the similar variety(ies)	Describe the expression of the characteristic(s) for your candidate variety
<i>Example</i>	<i>Flower bud: main color</i>	<i>yellow</i>	<i>orange</i>

Comments:

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:								
<p>#7. Additional information which may help in the examination of the variety</p> <p>7.1 In addition to the information provided in sections 5 and 6, are there any additional characteristics which may help to distinguish the variety?</p> <p>Yes [] No []</p> <p>(If yes, please provide details)</p> <p>7.2 Are there any special conditions for growing the variety or conducting the examination?</p> <p>Yes [] No []</p> <p>(If yes, please provide details)</p> <p>7.3 Other information</p> <p>7.3.1 Main use</p> <table data-bbox="453 1081 1246 1227"><tr><td>(a) garden plant</td><td>[]</td></tr><tr><td>(b) pot plant</td><td>[]</td></tr><tr><td>(c) cut-flower</td><td>[]</td></tr><tr><td>(d) other</td><td>[]</td></tr></table> <p>(please provide details)</p> <p>7.3.2 A representative color photograph of the variety should accompany the Technical Questionnaire.</p>			(a) garden plant	[]	(b) pot plant	[]	(c) cut-flower	[]	(d) other	[]

<p>8. Authorization for release</p> <p>(a) Does the variety require prior authorization for release under legislation concerning the protection of the environment, human and animal health?</p> <p>Yes [] No []</p> <p>(b) Has such authorization been obtained?</p> <p>Yes [] No []</p> <p>If the answer to (b) is yes, please attach a copy of the authorization.</p>										

Authorities may allow certain of this information to be provided in a confidential section of the Technical Questionnaire.

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

9. Information on plant material to be examined or submitted for examination.

9.1 The expression of a characteristic or several characteristics of a variety may be affected by factors, such as pests and disease, chemical treatment (e.g. growth retardants or pesticides), effects of tissue culture, different rootstocks, scions taken from different growth phases of a tree, etc.

9.2 The plant material should not have undergone any treatment which would affect the expression of the characteristics of the variety, unless the competent authorities allow or request such treatment. If the plant material has undergone such treatment, full details of the treatment must be given. In this respect, please indicate below, to the best of your knowledge, if the plant material to be examined has been subjected to:

- | | | |
|-----------------------------------------------------------|---------|--------|
| (a) Microorganisms (e.g. virus, bacteria, phytoplasma) | Yes [] | No [] |
| (b) Chemical treatment (e.g. growth retardant, pesticide) | Yes [] | No [] |
| (c) Tissue culture | Yes [] | No [] |
| (d) Other factors | Yes [] | No [] |

Please provide details for where you have indicated “yes”.

.....

10. I hereby declare that, to the best of my knowledge, the information provided in this form is correct:
