

TG/AMARAN(proj.8)

ORIGINAL: English

DATE: 2007-10-08

INTERNATIONAL UNION FOR THE PROTECTION OF NEW VARIETIES OF PLANTS

GENEVA

DRAFT**GRAIN AMARANTH**

UPOV Code: AMARA

(*Amaranthus* L.
excluding ornamental varieties)

GUIDELINES**FOR THE CONDUCT OF TESTS****FOR DISTINCTNESS, UNIFORMITY AND STABILITY**

prepared by experts from Mexico

*to be considered by the Enlarged Editorial Committee at its meeting
to be held in Geneva, Switzerland, on January 8, 2008*

Alternative Names:*

<i>Botanical name</i>	<i>English</i>	<i>French</i>	<i>German</i>	<i>Spanish</i>
<i>Amaranthus</i> L.	Amaranth	Amarante	Amarant, Fuchsschwanz	Amaranto

The purpose of these guidelines ("Test Guidelines") is to elaborate the principles contained in the General Introduction (document TG/1/3), and its associated TGP documents, into detailed practical guidance for the harmonized examination of distinctness, uniformity and stability (DUS) and, in particular, to identify appropriate characteristics for the examination of DUS and production of harmonized variety descriptions.

ASSOCIATED DOCUMENTS

These Test Guidelines should be read in conjunction with the General Introduction and its associated TGP documents.

* These names were correct at the time of the introduction of these Test Guidelines but may be revised or updated. [Readers are advised to consult the UPOV Code, which can be found on the UPOV Website (www.upov.int), for the latest information.]

1. Subject of these Test Guidelines

1.1 These Test Guidelines apply to all varieties of *Amaranthus* L. used for grain production.

1.2 The main grain species are *Amaranthus caudatus* L., *Amaranthus cruentus* L. and *Amaranthus hypochondriacus* L.

2. Material Required

2.1 The competent authorities decide on the quantity and quality of the plant material required for testing the variety and when and where it is to be delivered. Applicants submitting material from a State other than that in which the testing takes place must ensure that all customs formalities and phytosanitary requirements are complied with.

2.2 The material is to be supplied in the form of seed.

2.3 The minimum quantity of plant material, to be supplied by the applicant, should be:

100 g of seed.

2.4 The seed should meet the minimum requirements for germination, species and analytical purity, health and moisture content, specified by the competent authority. In cases where the seed is to be stored, the germination capacity should be as high as possible and should be stated by the applicant.

2.5 The plant material supplied should be visibly healthy, not lacking in vigor, nor affected by any important pest or disease.

2.6 The plant material should not have undergone any treatment which would affect the expression of the characteristics of the variety, unless the competent authorities allow or request such treatment. If it has been treated, full details of the treatment must be given.

3. Method of Examination

3.1 *Number of Growing Cycles*

The minimum duration of tests should normally be two independent growing cycles.

3.2 *Testing Place*

Tests are normally conducted at one place. In the case of tests conducted at more than one place, guidance is provided in TGP/9 "Examining Distinctness".

3.3 *Conditions for Conducting the Examination*

3.3.1 The tests should be carried out under conditions ensuring satisfactory growth for the expression of the relevant characteristics of the variety and for the conduct of the examination.

3.3.2 The recommended method of observing the characteristics is indicated by the following key in the second column of the Table of Characteristics:

MG: single measurement of a group of plants or parts of plants

MS: measurement of a number of individual plants or parts of plants

VG: visual assessment by a single observation of a group of plants or parts of plants

VS: visual assessment by observation of individual plants or parts of plants.

3.4 *Test Design*

3.4.1 In the case of inbred lines, each test should be designed to result in a total of at least 50 plants, which should be divided between two or more replicates.

3.4.2 In the case of cross-pollinated varieties, each test should be designed to result in a total of at least 150 plants, which should be divided between two or more replicates.

3.4.3 The design of the tests should be such that plants or parts of plants may be removed for measurement or counting without prejudice to the observations which must be made up to the end of the growing cycle.

3.5 *Number of Plants / Parts of Plants to be Examined*

Unless otherwise indicated, all observations on single plants should be made on 20 plants or parts taken from each of 20 plants and any other observations made on all plants in the test.

3.6 *Additional Tests*

Additional tests, for examining relevant characteristics, may be established.

4. Assessment of Distinctness, Uniformity and Stability

4.1 *Distinctness*

4.1.1 General Recommendations

It is of particular importance for users of these Test Guidelines to consult the General Introduction prior to making decisions regarding distinctness. However, the following points are provided for elaboration or emphasis in these Test Guidelines.

4.1.2 Consistent Differences

The differences observed between varieties may be so clear that more than one growing cycle is not necessary. In addition, in some circumstances, the influence of the environment is not such that more than a single growing cycle is required to provide assurance that the differences observed between varieties are sufficiently consistent. One means of ensuring that a difference in a characteristic, observed in a growing trial, is sufficiently consistent is to examine the characteristic in at least two independent growing cycles.

4.1.3 Clear Differences

Determining whether a difference between two varieties is clear depends on many factors, and should consider, in particular, the type of expression of the characteristic being examined, i.e. whether it is expressed in a qualitative, quantitative, or pseudo-qualitative manner. Therefore, it is important that users of these Test Guidelines are familiar with the recommendations contained in the General Introduction prior to making decisions regarding distinctness.

4.2 *Uniformity*

4.2.1 It is of particular importance for users of these Test Guidelines to consult the General Introduction prior to making decisions regarding uniformity. However, the following points are provided for elaboration or emphasis in these Test Guidelines:

4.2.2 Cross-pollinated varieties

The assessment of uniformity for cross-pollinated varieties should be according to the recommendations for cross-pollinated varieties and inbred lines in the General Introduction.

4.2.3 Inbred lines

For the assessment of uniformity of inbred lines, a population standard of 1% and an acceptance probability of at least 95% should be applied. In the case of a sample size of 50 plants, two off-types are allowed.

4.3 *Stability*

4.3.1 In practice, it is not usual to perform tests of stability that produce results as certain as those of the testing of distinctness and uniformity. However, experience has demonstrated that, for many types of variety, when a variety has been shown to be uniform, it can also be considered to be stable.

4.3.2 Where appropriate, or in cases of doubt, stability may be tested, either by growing a further generation, or by testing a new seed stock to ensure that it exhibits the same characteristics as those shown by the previous material supplied.

5. Grouping of Varieties and Organization of the Growing Trial

5.1 The selection of varieties of common knowledge to be grown in the trial with the candidate varieties and the way in which these varieties are divided into groups to facilitate the assessment of distinctness are aided by the use of grouping characteristics.

5.2 Grouping characteristics are those in which the documented states of expression, even where produced at different locations, can be used, either individually or in combination with other such characteristics: (a) to select varieties of common knowledge that can be excluded from the growing trial used for examination of distinctness; and (b) to organize the growing trial so that similar varieties are grouped together.

5.3 The following have been agreed as useful grouping characteristics:

- (a) Cotyledon: anthocyanin coloration (characteristic 1)
- (b) Seedling: anthocyanin coloration of hypocotyl (characteristic 2)
- (c) Petiole: anthocyanin coloration (characteristic 17)
- (d) Leaf blade: presence of blotch (characteristic 20)
- (e) Leaf blade: shape distribution of blotch (characteristic 23)
- (f) Inflorescence: color (characteristic 24)
- (g) Inflorescence: type (characteristic 27)
- (h) Inflorescence: size of bract relative to utricle (characteristic 29)
- (i) Inflorescence: growth habit (characteristic 30)
- (j) Stem: anthocyanin coloration of base (characteristic 35)
- (k) Stem: form of cross section (characteristic 36)
- (l) Seed: color (characteristic 37)
- (m) Seed: shape (characteristic 38)
- (n) Seed: type (characteristic 39)

5.4 Guidance for the use of grouping characteristics, in the process of examining distinctness, is provided through the General Introduction.

6. Introduction to the Table of Characteristics

6.1 *Categories of Characteristics*

6.1.1 Standard Test Guidelines Characteristics

Standard Test Guidelines characteristics are those which are approved by UPOV for examination of DUS and from which members of the Union can select those suitable for their particular circumstances.

6.1.2 Asterisked Characteristics

Asterisked characteristics (denoted by *) are those included in the Test Guidelines which are important for the international harmonization of variety descriptions and should always be examined for DUS and included in the variety description by all members of the Union, except when the state of expression of a preceding characteristic or regional environmental conditions render this inappropriate.

6.2 *States of Expression and Corresponding Notes*

States of expression are given for each characteristic to define the characteristic and to harmonize descriptions. Each state of expression is allocated a corresponding numerical note for ease of recording of data and for the production and exchange of the description.

6.3 *Types of Expression*

An explanation of the types of expression of characteristics (qualitative, quantitative and pseudo-qualitative) is provided in the General Introduction.

6.4 *Example Varieties*

Where appropriate, example varieties are provided to clarify the states of expression of each characteristic.

6.5 *Legend*

(*) Asterisked characteristic – see Chapter 6.1.2

QL: Qualitative characteristic – see Chapter 6.3

QN: Quantitative characteristic – see Chapter 6.3

PQ: Pseudo-qualitative characteristic – see Chapter 6.3

MG, MS, VG, VS: See Chapter 3.3.2

(a)-(g) See Explanations on the Table of Characteristics in Chapter 8.1

(+) See Explanations on the Table of Characteristics in Chapter 8.2

8. Explanations on the Table of Characteristics

8.1 *Explanations covering several characteristics*

Characteristics containing the following key in the second column of the Table of Characteristics should be examined as indicated below:

- (a) Observations on the seedling which should be made 3-6 days after emergence
- (b) Observations on the young plant with 6 to 8 leaves
- (c) Observations should be made at vegetative stage, just before inflorescence emergence
- (d) Observations should be made at beginning of inflorescence emergence
- (e) Observations should be made at full flowering: 50% of the plants
- (f) Observations should be made at physiological maturity
- (g) Observations should be made on dry seeds at harvest time

8.2 *Explanations for individual characteristics*

Ad. 7: Young leaf: position of broadest part

1
in middle or slightly towards
base

2
moderately towards base

3
strongly towards base

Ad. 10: Young leaf: distribution of secondary color on upper side

1
colored basal area

2
central blotch

3
one "V" shaped stripe

4
two "V" shaped stripes

5
colored margin and veins

6
one half of the leaf

Ad. 12: Leaf: type of margin

To be assessed on the last fully- developed leaf, before the inflorescence appears.

1
entire

2
sinuate

Ad. 13: Plant: time of beginning of emergence of inflorescence

The time of beginning of emergence of inflorescence is when 50 % of the plants have an inflorescence of at least 1 cm in length in the apex of the main stem.

Ad. 14: Plant time of flowering

The time of flowering is when the panicle is approximately 5 cm long, showing open flowers in its middle parts with separate stamens and the stigma is completely visible.

Ad. 20: Leaf blade: presence of blotch

1
absent

9
present

Ad. 21: Leaf blade: size of blotch in relation to blade

3
small

5
medium

7
large

Ad. 22: Leaf blade: color of blotch

1
green

2
silvery

3
red

4
purple

Ad. 23: Leaf blade: shape of blotch

1
ovoid

2
"V" shaped

Ad. 25: Inflorescence: compactness

Defined by the angle formed between the lateral branches in relation to the main axis of the inflorescence

3
compact

5
intermediate

7
open

Ad. 26: Inflorescence: density of glomerules

The density of glomerules should be observed on the lateral branches of the main inflorescence.

3
sparse

5
medium

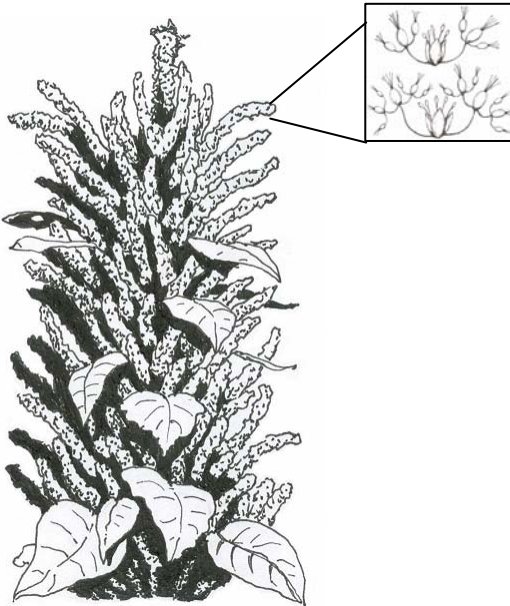

7
dense

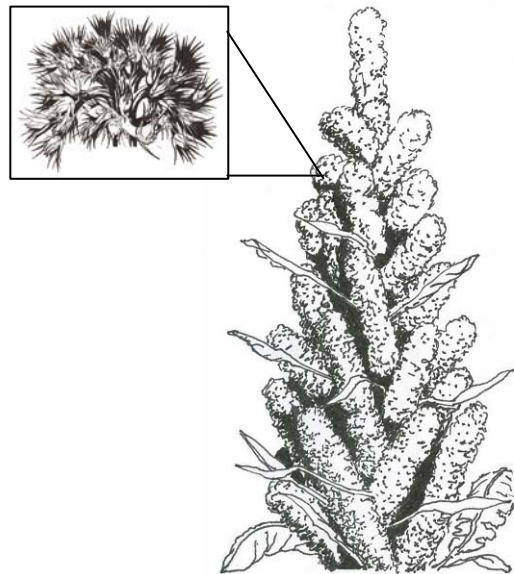

Ad. 27: Inflorescence: type

Amarantiform: the assessment from flowering stage up to full developed grains. If the panicle glomerules are inserted directly to the secondary axis and presenting extended shape called amarantiform inflorescence

Glomerulate: if glomerules are inserted in the glomerulated axes and to display a spherical shape, the inflorescence is called glomerulate.

1
amarantiform

2
glomerulate

Ad. 29: Inflorescence: size of bract relative to utricle

It is recommended to observe it with a microscope and to identify the following structures:

Utricle: It is formed by the mature seed and the dehiscent layer that covers it (opercule).

Bracts: Structure, after the tepals that protect the utricle. Can be of different size in relation to it.

Ad. 31: Inflorescence: attitude

Ad. 33: Plant: time of maturity

The time of plant maturity is when seed taken from the central part of the inflorescence does not change shape when pressed between fingers.

Ad. 34: Plant: height

To be measured from the base of the plant to the tip of the inflorescence.

Ad. 36: Stem: form of cross section

1
circular

2
undulated

Ad. 38: Seed: shape

1
ellipsoid

2
discoid

Ad. 39: Seed type

Observation of the seed through diafanoscopy, to describe the type as perisperm that can be flint or floury.

Ad. 40: Seed weight per 1000 seeds

The seed weight should be measured on eight samples of 1000 seeds, at a moisture of 10%.

10. Technical Questionnaire

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
		Application date: (not to be filled in by the applicant)
TECHNICAL QUESTIONNAIRE to be completed in connection with an application for plant breeders' rights		
1. Subject of the Technical Questionnaire		
1.1 Botanical Name	<input type="text" value="Amaranthus L."/>	
1.2 Common Name	<input type="text" value="Amaranth"/>	
	Species (please complete)	
	<input type="text"/>	
2. Applicant		
Name	<input type="text"/>	
Address	<input type="text"/>	
Telephone No.	<input type="text"/>	
Fax No.	<input type="text"/>	
E-mail address	<input type="text"/>	
Breeder (if different from applicant)	<input type="text"/>	
3. Proposed denomination and breeder's reference		
Proposed denomination (if available)	<input type="text"/>	
Breeder's reference	<input type="text"/>	

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

#4. Information on the breeding scheme and propagation of the variety

4.1 Breeding scheme

Variety resulting from:

4.1.1 Crossing

- (a) controlled cross []
(please state parent varieties)
- (b) partially known cross []
(please state known parent variety(ies))
- (c) unknown cross []

4.1.2 Mutation []
(please state parent variety)

4.1.3 Discovery and development []
(please state where and when discovered
and how developed)

4.1.4 Other []
(please provide details)

4.2 Method of propagating the variety

4.2.1 Seed-propagated varieties

- (a) Self-pollination []
- (b) Cross-pollination
 - (i) population []
 - (ii) synthetic variety []
- (c) Hybrid []
- (d) Other []

Authorities may allow certain of this information to be provided in a confidential section of the Technical Questionnaire.

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

5. Characteristics of the variety to be indicated (the number in brackets refers to the corresponding characteristic in Test Guidelines; please mark the note which best corresponds).

Characteristics	Example Varieties	Note
5.1 Cotyledon: anthocyanin coloration (1)		
absent	Eniko, Maros, Revancha	1[]
present	Edit, Nutrisol, Reka, Rojita	9[]
5.2 Seedling: anthocyanin coloration of hypocotyl (2)		
absent	Mariel	1[]
present	Edit, Nutrisol, Rojita	9[]
5.3 Petiole: anthocyanin coloration (17)		
absent	Edit, Revancha, Rojita	1[]
present	Nutrisol, Reka, Roza	9[]
5.4 Leaf blade: presence of blotch (20)		
absent	Eniko, Maros, Revancha	1[]
present	Edit	9[]
5.5 Leaf blade: shape of blotch (23)		
ovoid	Edit	1[]
“V”shaped	Mixteco	2[]
5.6 Inflorescence: color (24)		
yellow	Mariel	1[]
green	Eniko, Maros, Revancha	2[]
pink	Roza	3[]
red	Edit, Rojita	4[]
purple	Nutrisol, Reka	5[]
brown	Tulyehualco	6[]

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

Characteristics	Example Varieties	Note
5.7 Inflorescence: type (27)		
amarantiform	Nutrisol	1[]
glomerulate	Reka, Revancha, Roza	2[]
5.8 Inflorescence: size of bract relative to utricle (29)		
smaller	Reka	1[]
equal	Revancha	2[]
larger	Edit, Nutrisol	3[]
5.9 Inflorescence: growth habit (30)		
determinate	Eniko, Maros, Revancha	1[]
indeterminate	Nutrisol	2[]
5.10 Stem: anthocyanin coloration of base (35)		
absent	Revancha	1[]
present	Nutrisol, Roza	9[]
5.11 Stem: form of cross section (36)		
circular	Reka	1[]
undulated	Edit, Revancha, Roza	2[]
5.12 Seed: color (37)		
white	Edit, Maros, Revancha, Roza	1[]
yellow	ITAX0053	2[]
pink	Reka	3[]
brown	Mixteco café	4[]
black	Mixteco negro	5[]

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

	Characteristics	Example Varieties	Note
5.13 (38)	Seed: shape		
	ellipsoid	Nutrisol, Revancha	1[]
	discoid	Rojita	2[]
5.14 (39)	Seed: type		
	flint	Nutrisol, Rojita	1[]
	floury	Edit, Revancha	2[]

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

6. Similar varieties and differences from these varieties

Please use the following table and box for comments to provide information on how your candidate variety differs from the variety (or varieties) which, to the best of your knowledge, is (or are) most similar. This information may help the examination authority to conduct its examination of distinctness in a more efficient way.

Denomination(s) of variety(ies) similar to your candidate variety	Characteristic(s) in which your candidate variety differs from the similar variety(ies)	Describe the expression of the characteristic(s) for the similar variety(ies)	Describe the expression of the characteristic(s) for your candidate variety
<i>Example</i>	<i>Plant: time of beginning of emergence of inflorescence</i>	<i>early</i>	<i>medium</i>
Comments:			

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

#7. Additional information which may help in the examination of the variety

7.1 In addition to the information provided in sections 5 and 6, are there any additional characteristics which may help to distinguish the variety?

Yes [] No []

(If yes, please provide details)

7.2 Are there any special conditions for growing the variety or conducting the examination?

Yes [] No []

(If yes, please provide details)

7.3 Other information

8. Authorization for release

(a) Does the variety require prior authorization for release under legislation concerning the protection of the environment, human and animal health?

Yes [] No []

(b) Has such authorization been obtained?

Yes [] No []

If the answer to (b) is yes, please attach a copy of the authorization.

Authorities may allow certain of this information to be provided in a confidential section of the Technical Questionnaire.

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

9. Information on plant material to be examined or submitted for examination

9.1 The expression of a characteristic or several characteristics of a variety may be affected by factors, such as pests and disease, chemical treatment (e.g. growth retardants or pesticides), effects of tissue culture, different rootstocks, scions taken from different growth phases of a tree, etc.

9.2 The plant material should not have undergone any treatment which would affect the expression of the characteristics of the variety, unless the competent authorities allow or request such treatment. If the plant material has undergone such treatment, full details of the treatment must be given. In this respect, please indicate below, to the best of your knowledge, if the plant material to be examined has been subjected to:

- | | | |
|---|---------|--------|
| (a) Microorganisms (e.g. virus, bacteria, phytoplasma) | Yes [] | No [] |
| (b) Chemical treatment (e.g. growth retardant, pesticide) | Yes [] | No [] |
| (c) Tissue culture | Yes [] | No [] |
| (d) Other factors | Yes [] | No [] |

Please provide details for where you have indicated “yes”.

.....

9.3 Has the plant material to be examined been tested for the presence of virus or other pathogens?

Yes []

(please provide details as specified by the Authority)

No []

10. I hereby declare that, to the best of my knowledge, the information provided in this form is correct:
