## GUIDELINES

FOR THE CONDUCT OF TESTS

FOR DISTINCTNESS, UNIFORMITY AND STABILITY

SUGARCANE

(*Saccharum L.*)

These Guidelines should be read in conjunction with document TG/1/2, which contains explanatory notes on the general principles on which the Guidelines have been established.

<u>TABLE OF CONTENTS</u>	<u>PAGE</u>

IX   Literature .....	26
X   Technical Questionnaire .....	27

## I. Subject of these Guidelines

These Test Guidelines apply to all vegetatively propagated varieties of *Saccharum* L. of the family *Gramineae*(*Poaceae*).

## II. Material Required

1. The competent authorities decide when, where and in what quantity and quality the plant material required for testing the variety is to be delivered. Applicants submitting material from States other than that in which the testing takes place must ensure that all customs formalities are complied with. As a minimum, the following quantity of plant material is recommended:

12 seed pieces with 3 buds each, properly packaged to minimize damage to the buds.

2. The seed pieces should be supplied from plants about 8 to 12 months old, visibly healthy, not lacking in vigor or affected by any important pests or diseases. It should preferably not be obtained from *in vitro* propagation.

3. The plant material must not have undergone any treatment unless the competent authorities allow or request such treatment. If it has been treated, full details of the treatment must be given.

## III. Conduct of Tests

1. The tests should normally be conducted over one growing cycle. If distinctness and/or uniformity cannot be sufficiently established in one growing period, the test should be extended for a second growing period.

2. The tests should normally be conducted at one place. If any important characteristics of the variety cannot be seen at that place, the variety may be tested at an additional place.

3. The test should be carried out under conditions ensuring normal growth. The size of the plots should be such that plants or parts of plants may be removed for measurement and counting without prejudice to the observations which must be made up to the end of the growing period. Each test should include a total of 6 stalks, all from different plants, divided in two or more replicates. Separate plots for observation and for measuring can only be used if they have been subject to similar environmental conditions.

4. Additional tests for special purposes may be established.

## IV. Methods and Observations

1. All observations for qualitative characteristics should be made on 6 stalks. For quantitative characteristics 24 stalks from different plants should be used. Plants should be observed in first growth (plant cane) and all characteristics should be described on plants between 10 to 12 months of age.

2. All observations determined by measurements, weighing or counting, should be made on 24 stalks.
3. For the assessment of uniformity, a population standard of 1% and an acceptance probability of at least 95% should be applied. In the case of a sample size of 6 stalks, the maximum number of off-types allowed would be 1 (one).
4. All observations on the stem should be made on a representative stem.
5. Unless otherwise indicated all observations on the node and internode should be made on the longest internode of the representative stem.
6. All observations on the leaf blade and leaf sheath should be made on fully extended leaves, on the upper part of stalks of vegetative stage.
7. The cane top is defined as the region between the youngest exposed visible dewlap and the insertion of the fourth youngest fully extended leaf (leaf + 4) in the stem.

#### V. Grouping of Varieties

1. The collection of varieties to be grown should be divided into groups to facilitate the assessment of distinctness. Characteristics that are suitable for grouping purposes are those that are known from experience not to vary, or to vary only slightly, within a variety. Their various states of expression are fairly evenly distributed throughout the collection.
2. It is recommended that the competent authorities use the following characteristics for grouping varieties:
  - (a) Plant: adherence of leaf sheath (characteristic 2))
  - (b) Internode: shape (characteristic 10)
  - (c) Internode: color where exposed to the sun (characteristic 12)
  - (d) Internode: color where not exposed to sun (characteristic 13)
  - (e) Internode: zigzag alignment (characteristic 15)
  - (f) Node: shape of bud (characteristic 21)
  - (g) Leaf sheath: color of dewlap (characteristic 42)
  - (h) Leaf blade: width in the middle of the length (characteristic 44)

#### VI. Characteristics and Symbols

1. To assess distinctness, uniformity and stability, the characteristics and their states as given in the Table of Characteristics should be used.
2. Notes (numbers), for the purposes of electronic data processing, are given opposite the states of expression for each characteristic.

Legend:

(\*) Characteristics that should be used on all varieties in every growing period over which examinations are made and always be included in the variety descriptions, except when the state of expression of a preceding characteristic or regional environmental conditions render this impossible.

(+) See Explanations on the Table of Characteristics in Chapter VIII.

VII. Table of Characteristics/Tableau des caractères/Merkmalstabelle/Tabla de caracteresticas

### VIII. Explanations on the Table of Characteristics

#### Ad. 2: Plant: adherence of leaf sheath

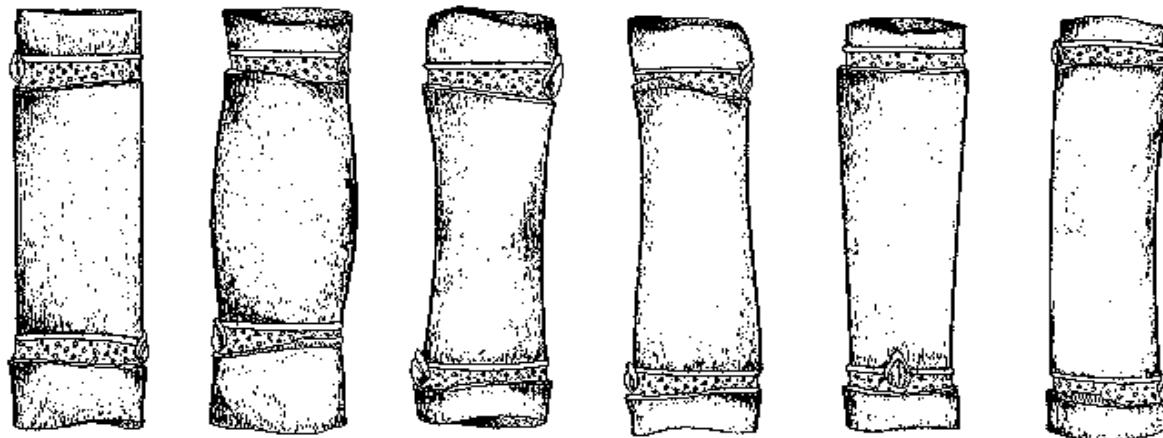

In the lower half of the stool in the senescing leaves.

#### Ad. 7: Leaf: culm height (base to TVD leaf)

Based on quantitative measurements of 24 stalks.

TVD = top visible dewlap

#### Ad. 10: Internode shape

1            2            3            4            5            6  
cylindrical    tumescent    bobbin-shaped    conoidal    obconoidal    concave-convex

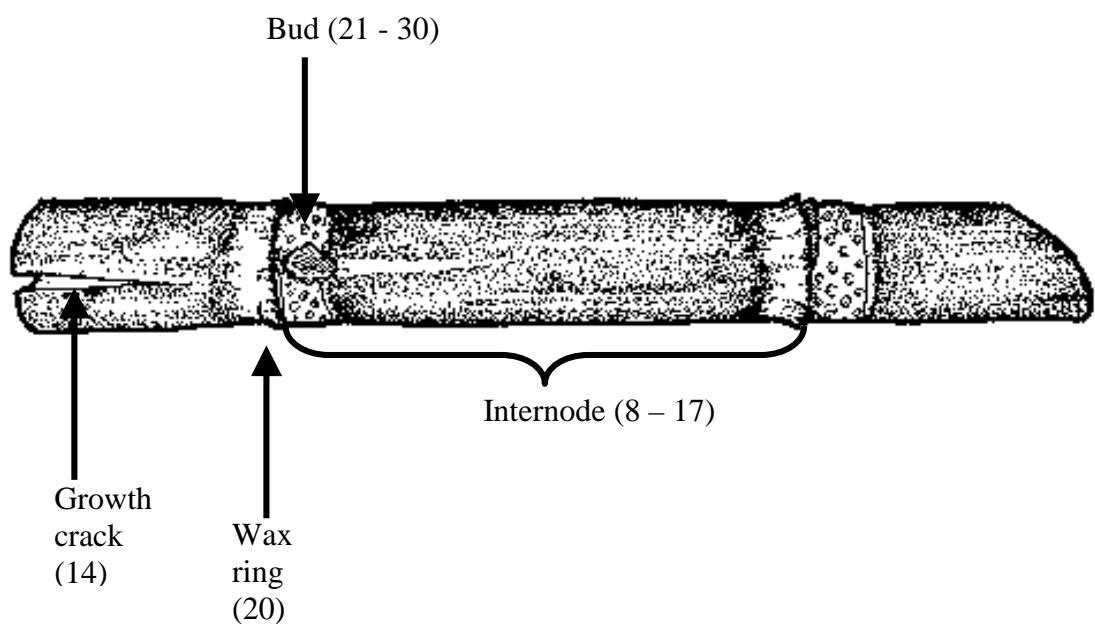

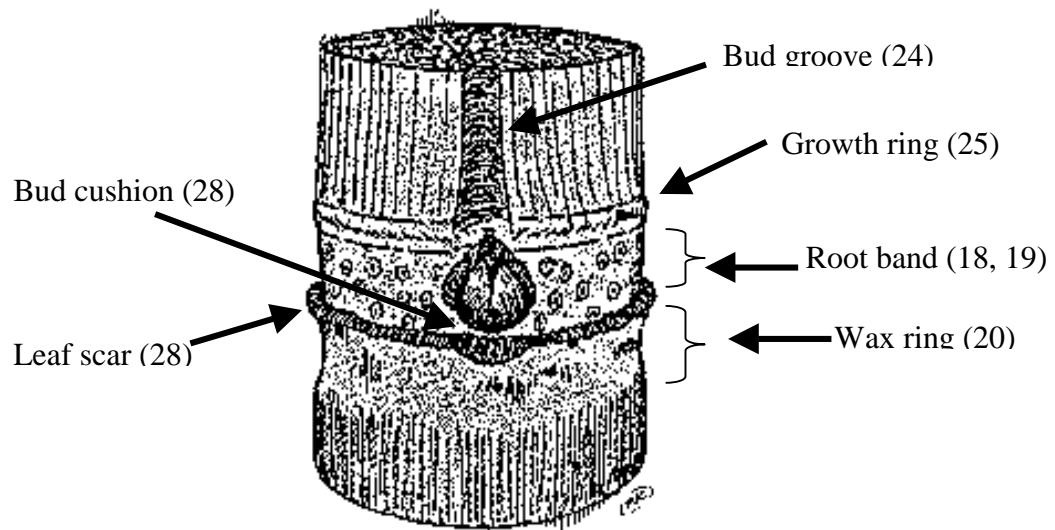

#### Ad. 12: Internode: color where exposed to sun

With wax, after three days of exposure to the sun.

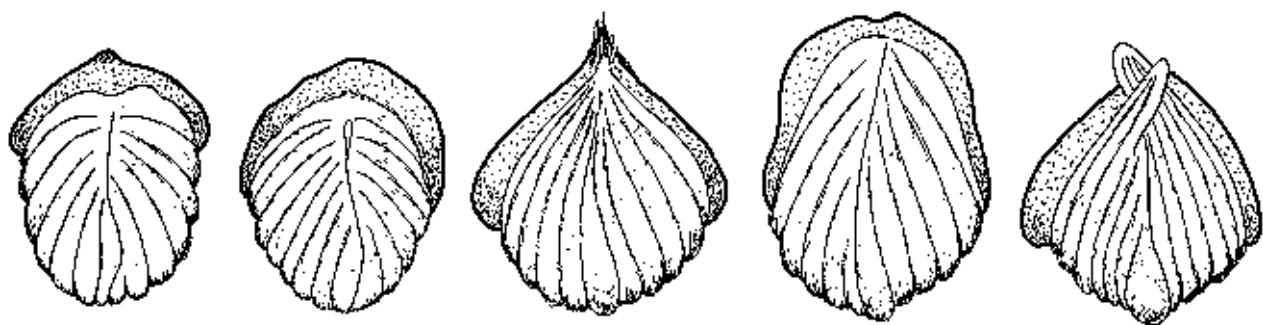

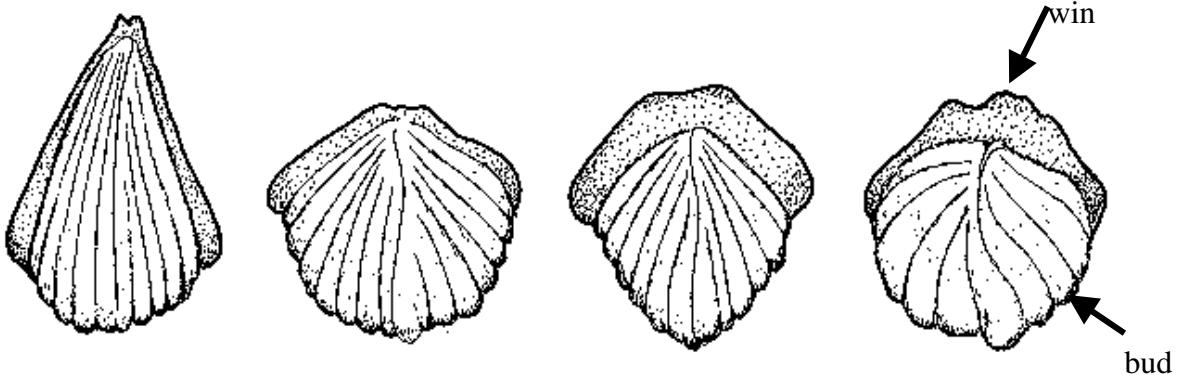

#### Ad. 13: Internode: color where not exposed to sun

On a stalk protected from the sun, on which the wax has been removed.

Ad. 8 to 17: Internode and 18 to 30: Node

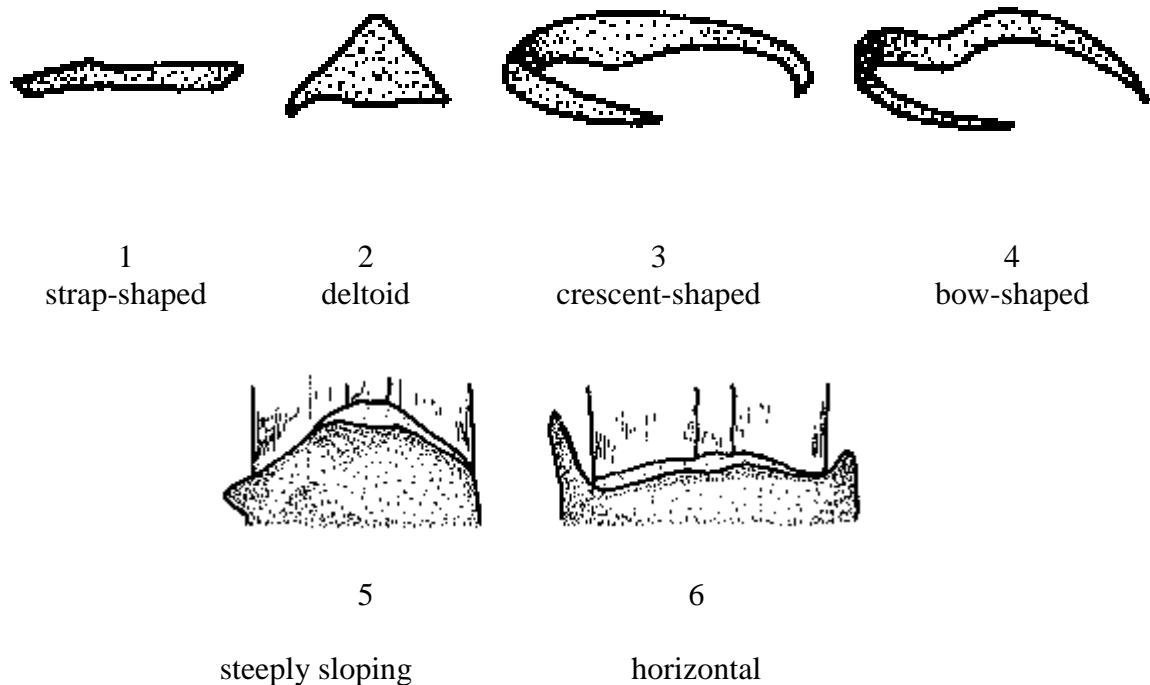

Ad. 21: Node: shape of bud

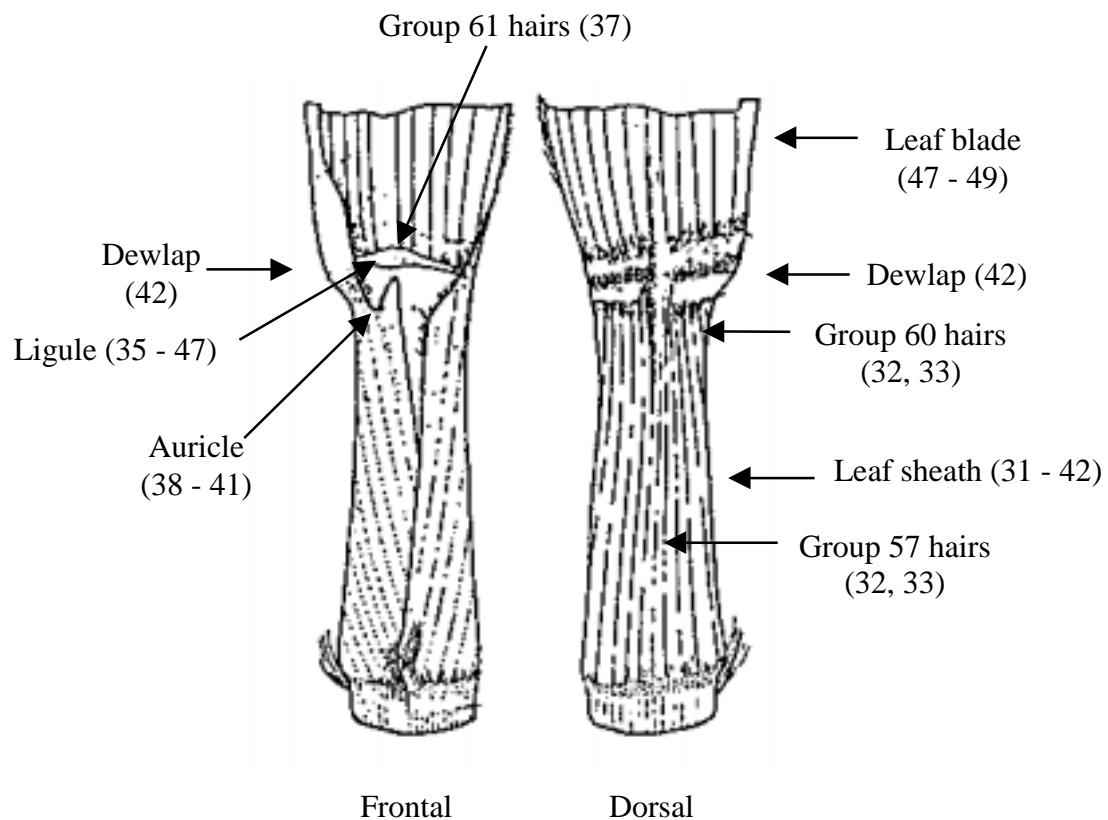

5                    6                    7                    8                    9  
rhomboid          round          ovate          rectangular          beaked

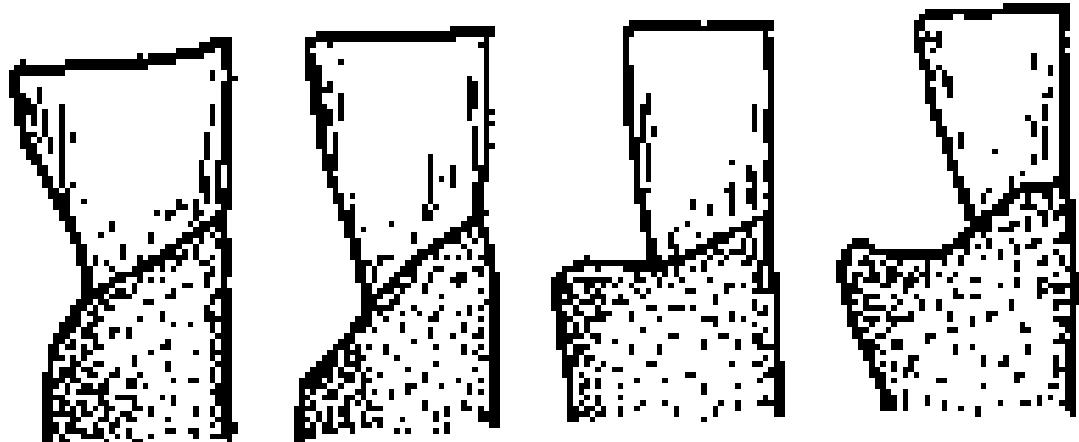

Ad. 35: Leaf sheath: shape of ligule

Ad. 31 to 42: Leaf sheath and 47 to 49: Leaf blade

Ad. 38 and 40: Leaf sheath: shape of auricle

GALLACHER, D.J., 1997. Optimised descriptors recommended for Australian sugarcane germplasm (*Saccharum* spp. hybrid) *Aust. J. Agric. Res* 48:775-79

X. Technical Questionnaire

	Reference Number (not to be filled in by the applicant)
TECHNICAL QUESTIONNAIRE to be completed in connection with an application for plant breeders' rights	
1.1 Genus	<i>Saccharum</i> L.  SUGAR CANE
1.2 Species	..... (indicate species)
2. Applicant (Name and address)	
3. Proposed denomination or breeder's reference	

4. Information on origin, maintenance and reproduction of the variety

4.1 Origin

(a) Seedling (indicate parent varieties)

.....

[ ]

(b) Mutation (indicate parent variety)

.....

[ ]

(c) Discovery (indicate where and when)

.....

[ ]

4.2 Other information

5. Characteristics of the variety to be indicated (the number in brackets refers to the corresponding characteristic in Test Guidelines; please mark the state of expression which best corresponds).

	Characteristics	Example Varieties	Note
<b>5.1</b> (2)	<b>Plant: adherence of leaf sheath</b>		
	weak	3 [ ]	
	medium	5 [ ]	
	strong	7 [ ]	
<b>5.2</b> (10)	<b>Internode: shape</b>		
	cylindrical	1 [ ]	
	tumescent	2 [ ]	
	bobbin-shaped	3 [ ]	
	conoidal	4 [ ]	
	obconoidal	5 [ ]	
	concave-convex	6 [ ]	
<b>5.3</b> (12)	<b>Internode: color where <u>exposed</u> to sun</b>		
	RHS Color chart (indicate reference number)		
<b>5.4</b> (13)	<b>Internode: color where <u>not exposed</u> to sun</b>		
	RHS Color chart (indicate reference number)		
<b>5.5</b> (15)	<b>Internode: zigzag alignment</b>		
	absent or very weakly expressed	1 [ ]	
	weakly expressed	3 [ ]	
	moderately expressed	5 [ ]	
	strongly expressed	7 [ ]	

	Characteristics	Example Varieties	Note
<b>5.6 (21)</b>	<b>Node: shape of bud</b>		
	triangular-pointed	1 [ ]	
	oval	2 [ ]	
	obovate	3 [ ]	
	pentagonal	4 [ ]	
	rhomboid	5 [ ]	
	round	6 [ ]	
	ovate	7 [ ]	
	rectangular	8 [ ]	
	beaked	9 [ ]	
<b>5.7 (42)</b>	<b>Leaf sheath: color of dewlap</b>		
	RHS Color chart (indicate reference number)		
<b>5.8 (44)</b>	<b>Leaf blade: width in the middle of the length</b>		
	narrow	3 [ ]	
	medium	5 [ ]	
	broad	7 [ ]	

6. Similar varieties and differences from these varieties

Denomination of similar variety	Characteristic in which the similar variety is different <sup>o)</sup>	State of expression of similar variety	State of expression of candidate variety

<sup>o)</sup> In the case of identical states of expressions of both varieties, please indicate the size of the difference.

7. Additional information which may help to distinguish the variety

7.1 Resistance to pests and diseases

7.2 Special conditions for the examination of the variety

(a) Conditions for planting

(b) Other conditions

7.2 Other information

8. Authorization for release

(a) Does the variety require prior authorization for release under legislation concerning the protection of the environment, human and animal health?

Yes [ ] No [ ]

(b) Has such authorization been obtained?

Yes [ ] No [ ]

If the answer to that question is yes, please attach a copy of such an authorization.
