

PREPARATORY WORKSHOP

Angers, France May 20, 2012

	PROGRAM
Ι.	Introduction to UPOV
2.	Overview of the General Introduction (document TG/1/3 and TGP documents)
3.	Guidance on drafting Test Guidelines (document TGP/7)
(a)	Selection of characteristics
(b)	 Guidance on drafting characteristics (i) Types of expression (OL, ON, PO), notes and distinctness (ii) Method of observation (V/M: G/S) (iii) Asterisked, grouping and TQ characteristics (iv) Example varieties
(c)	The process for developing UPOV Test Guidelines

PROGRAM

- 4. Situation in UPOV Concerning the possible use of Molecular Techniques in the DUS Examination
- 5. UPOV databases (UPOV-ROM Plant Variety Database; GENIE database)
- 6. The UPOV website
- 7. Role of UPOV Technical Working Parties (TWPs) and the BMT
- 8. Agenda for the TWA Session
- 9. Feedback

1. INTRODUCTION TO UPOV

UPOV: INDEPENDENT INTERGOVERNMENTAL ORGANIZATION

The International Convention for the Protection of New Varieties of Plants established in 1961

The International **Union** for the Protection of New Varieties of Plants

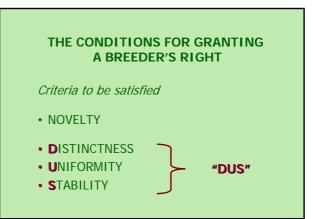

Union internationale pour la protection des obtentions végétales

2. OVERVIEW OF THE GENERAL INTRODUCTION

(DOCUMENT TG/1/3 AND TGP DOCUMENTS)

GUIDANCE FOR DUS EXAMINATION

THE CONDITIONS FOR GRANTING A BREEDER'S RIGHT

Other conditions

- VARIETY DENOMINATION
- FORMALITIES
- PAYMENT OF FEES

NO OTHER CONDITIONS!

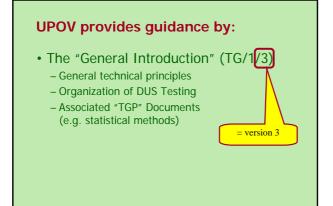

Guidance for DUS Examination

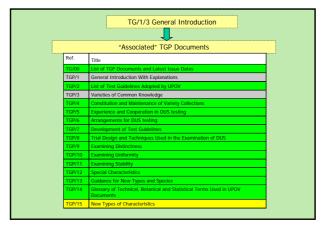

facilitates:

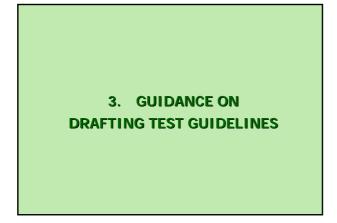

- BEST PRACTICE (based on experience) => good decisions
 - => good definition of the object of protection
 - (strong protection)
 - => efficiency in method of examination (learn from the best)

HARMONIZATION

- => efficiency
 - mutual acceptance of DUS reports
 - (minimize cost of examination for individual authorities)
 - mutual recognition of variety descriptions (all parties speak the same "language")
 - simple and cheap system for applicants
 - (minimize cost for breeders)

UPOV provides guidance by:

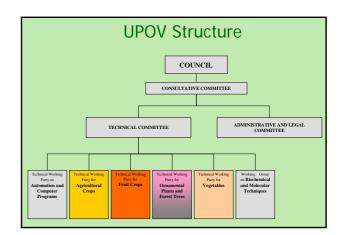

- The "General Introduction" (TG/1/3)
 - General technical principles
 - Organization of DUS Testing
 - Associated "TGP" Documents (e.g. statistical methods)

AND

"Test Guidelines"

- Species/Crop-specific recommendations developed by crop experts
 TGP/7 "Development of Test Guidelines" adopted

10 Chapters of UPOV Test Guidelines

- 1. Subject of the Test Guidelines
- 2. Material Required
- 3. Methods of Examination
- 4. Assessment of Distinctness, Uniformity and Stability
- 5. Grouping of Varieties and Organization of the Growing Trial
- 6. Introduction to the Table of Characteristics **7. Table of Characteristics**
- 8. Explanation on the Table of Characteristics
- 9. Literature
- 10. Technical Questionnaire

- 3. TEST GUIDELINES
- (a) Selection of characteristics

"CHARACTERISTICS"

- may have direct commercial relevanceFlower color (ornamental)
 - Fruit color
- but commercial relevance NOT required - Leaf shape

Selection of Characteristics

The basic requirements that a characteristic should fulfill before it is used for DUS testing or producing a variety description are that its expression (TG/1/3: Section 4.2.1):

- (a) results from a given genotype or combination of genotypes;
 (b) is sufficiently consistent and repeatable in a particular environment;
- (c) exhibits sufficient **variation between varieties** to be able to establish distinctness;
- (d) is capable of precise definition and recognition;
- (e) allows uniformity requirements to be fulfilled;
- (f) allows **stability requirements** to be fulfilled, meaning that it
- produces consistent and repeatable results after repeated propagation or, where appropriate, at the end of each cycle of propagation.

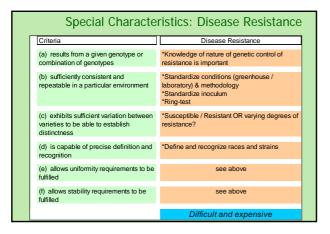

Selection of Characteristics

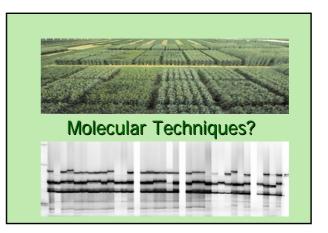

- Yield ???
- Straw strength ???

Etc.

Criteria Fruit: Leaf: Stape (a) results from a given genotype or combination of genotypes Yes Yes (b) sufficiently consistent and repeatable in a particular environment Yes Yes (c) exhibits sufficient variation between varieties to be able to establish distinctness Yes Yes (d) is capable of precise definition and recognition Yes Yes (e) allows uniformity requirements to be fulfilled Yes Yes (f) allows stability requirements to be fulfilled Yes Yes Commercial value Yes Yes	Selection of Characte	eristic	S

"Quantitative characteristics" are those where the expression covers the full range of variation from one extreme to the other. The **expression can be recorded on a one-dimensional, continuous or discrete, linear scale**. The range of expression is divided into a number of states for the purpose of description (e.g. length of stem: very short (1), short (3), medium (5), long (7), very long (9)). The division seeks to provide, as far as is practical, an even distribution across the scale. The Test Guidelines do not specify the difference needed for distinctness. The states of expression should, however, be meaningful for DUS assessment.

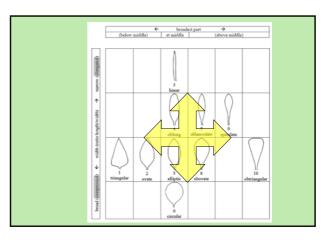

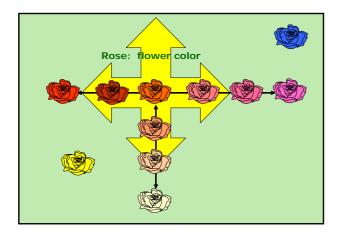

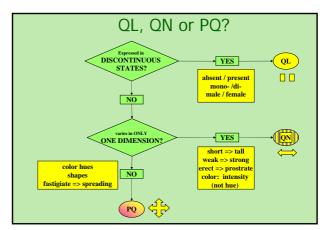

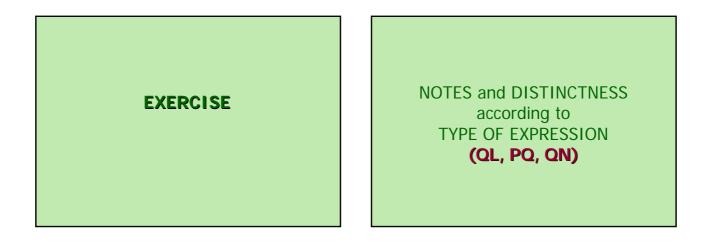

In the case of "pseudo-qualitative characteristics," the **range of expression is at least partly continuous, but varies in more than one dimension** (e.g. shape: ovate (1), elliptic (2), circular (3), obovate (4)) and cannot be adequately described by just defining two ends of a linear range. In a similar way to qualitative (discontinuous) characteristics – hence the term "pseudo-qualitative" – each individual state of expression needs to be identified to adequately describe the range of the characteristic.

		Qua		Characteri Il cases)	stics	
Char No.	Method of Fvamination Buggu	français	deutsch	español	Example Varieties/ Exemples/ Beispielssorten/ Variedades ejemplo	Note/ Nota

QL	diploid tetraploid					2
3. (*)	VG Stem: anthoc coloration	yanin				
QL	absent				Gumpoong	1
	present				Chunpoong, Gopoong	9

Qualitative Characteristics: **distinctness**

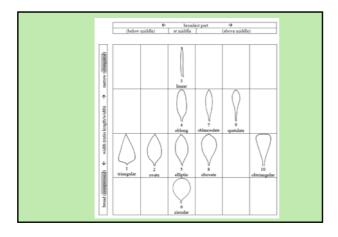

In qualitative characteristics, the difference between two varieties may be considered clear if one or more characteristics have expressions that fall into **two different states in the Test Guidelines**. Varieties should not be considered distinct for a qualitative characteristic if they have the same state of expression.

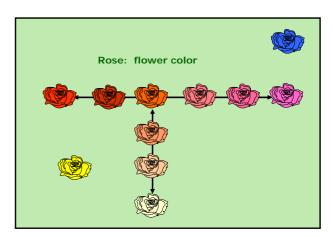

(e.g. sex of plant: dioecious female (1), dioecious male (2), monoecious unisexual (3), monoecious hermaphrodite (4)).

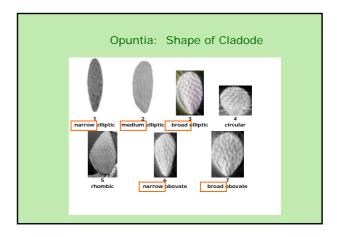

PSEUDO-QUALITATIVE Characteristics

In the case of "pseudo-qualitative characteristics," the **range of expression is at least partly continuous, but varies in more than one dimension** (e.g. shape: ovate (1), elliptic (2), circular (3), obovate (4)) and cannot be adequately described by just defining two ends of a linear range. In a similar way to qualitative (discontinuous) characteristics – hence the term "pseudo-qualitative" – each individual state of expression needs to be identified to adequately describe the range of the characteristic.

	orange	orange	omage	naranja	3
	pink	rose	rosa	706a	4
	red	rouge	tot	тојо	5
	purple	pourpre	purpura	púrpura	6

Pseudo-Oualitative Characteristics: distinctness

A different state in the Test Guidelines may not be sufficient to establish distinctness (see also section 5.5.2.3). However, in certain circumstances, varieties described by the same state of expression may be clearly distinguishable.

Types of Expression

QL: QUALITATIVE

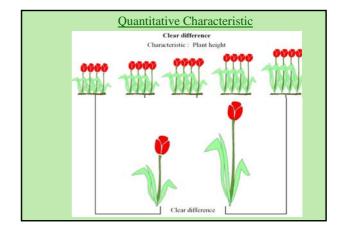

- **QN: QUANTITATIVE**
- PQ: PSEUDO-QUALITATIVE

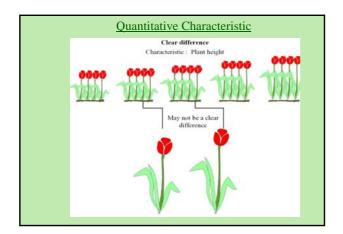

OUANTITATIVE Characteristics

"Quantitative characteristics" are those where the expression covers the full range of variation from one extreme to the other. The **expression can be recorded on a one-dimensional, continuous or discrete, linear scale**. The range of expression is divided into a number of states for the purpose of description (e.g. length of stem: very short (1), short (3), medium (5), long (7), very long (9)). The division seeks to provide, as far as is practical, an even distribution across the scale. The Test Guidelines do not specify the difference needed for distinctness. The states of expression should, however, be meaningful for DUS assessment.

Ouantitative Characteristics: distinctness

Quantitative characteristics are considered for distinctness according to the method of observation and the features of propagation of the variety concerned...

NOTES Versus SIDE-BY-SIDE COMPARISON (Quantitative characteristics)

TGP/9/1 "Examining Distinctness"

5.2 Approaches for assessing distinctness

5.2.1 Introduction

5.2.1.1 Approaches for assessment of distinctness based on the growing trial can be summarized as follows:

- (a) Side-by-side visual comparison in the growing trial
- (see Section 5.2.2);
- (b) Assessment by Notes / single variety records ("Notes"): the assessment of distinctness is based on the recorded state of expression of the characteristics of the variety
- (see Section 5.2.3);

(c) Statistical analysis of growing trial data:

Quantitative Characteristics: distinctness

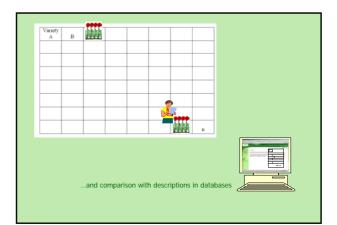

The General Introduction explains that, in the case of visually observed quantitative characteristics:

"5.5.2.2.2 A direct comparison between two similar varieties is always recommended, since direct pairwise comparisons are the most reliable. In each comparison, a difference between two varieties is acceptable as soon as it can be assessed visually and could be measured, although such measurement might be impractical or require unreasonable effort."

TGP/9/1 "Examining Distinctness"

5.2.3.1.2 Where the requirements for distinctness assessment by Notes / single variety records are met it would usually also be possible to make a side-by-side visual comparison. However, in the case of assessment by Notes / single variety records, such proximity is not required, which is a particular advantage where the growing trial contains a large number of varieties and where there are limited possibilities for ensuring that all similar varieties are grouped together in the growing trial. ...

On the other hand, because the varieties are not the subject of a side-by-side visual comparison, the difference required between varieties as a basis for distinctness is, with the exception of qualitative characteristics (see below), somewhat greater.

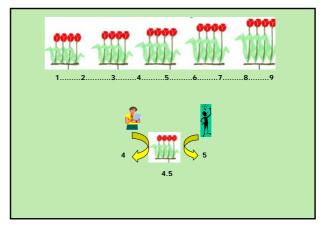

Ouantitative Characteristics: distinctness

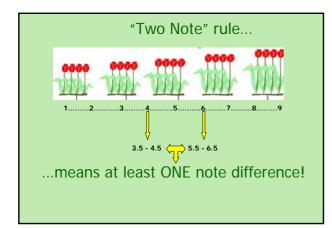

Quantitative characteristics are considered for distinctness according to the method of observation and the features of propagation of the variety concerned

Test Guidelines (TGP/7 proposed revised text)

Difference of **two Notes to represent a clear difference if** the **comparison** between two varieties is performed **at the level of Notes**:

WHY?

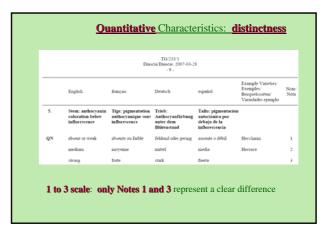

Quantitative Characteristics: distinctness

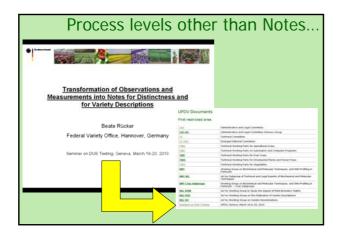

Quantitative characteristics are considered for distinctness according to the method of observation and the features of propagation of the variety concerned.

Test Guidelines (TGP/7 proposed revised text)

Difference of **two Notes to represent a clear difference if** the **comparison** between two varieties is performed **at the level of Notes**:

Method of Observation

M: Measurement

an objective **observation against a calibrated, linear scale** e.g. using a ruler, weighing scales, colorimeter, dates, counts, etc.);

V: Visual observation:

includes observations where the expert uses reference points (e.g. diagrams, example varieties, side-by-side comparison) or non-linear charts (e.g. color charts).

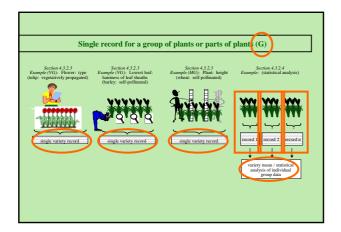

"Visual" observation refers to the sensory observations of the expert and, therefore, also **includes smell, taste and touch**.

(b) Guidance on drafting characteristics

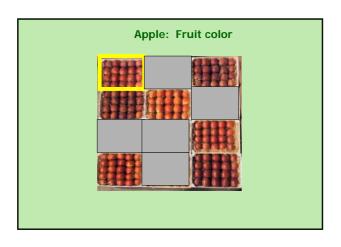

(iii) Asterisked, grouping and TQ characteristics

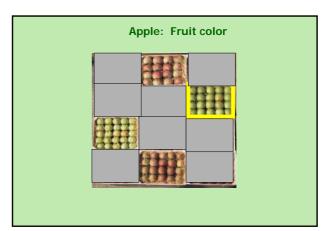

Standard Test Guidelines Characteristic					
Function	Criteria				
1.Characteristics that are accepted by UPOV for examination of DUS and from which members of the Union can select those suitable for their particular circumstances.	1.Must satisfy the criteria for use of any characteristic for DUS as set out in Chapter 4, section 4.2 . 2.Must have been used to develop a variety description by at least one member of the Union . 3.Where there is a long list of such characteristics and, where considered appropriate, there may be an indication of the extent of use of each characteristic.

	semi-trailing	semi-étalé	halbhängend	semirrastrero	Inupsaf	4
	trailing	coureux	hängend	rastrero	Organza	5

Asterisk	ed Characteristic
Function	Criteria
1.Characteristics that are important for the international harmonization of variety descriptions.	1.Must be a characteristic included in the Test Guidelines. 2.Should always be examined for DUS and included in the variety description by all members of the Union EXCEPT when the state of expression of a preceding characteristic or regional environmental conditions render this inappropriate. 3.Must be useful for function 1. 4.Particular care should be taken before selection of disease resistance characteristics.

	3. TEST GUIDELINES
	(document TGP/7)
(c)	The process for developing UPOV
	Test Guidelines

- >3,000 genera and species with varieties examined for PBR
- >2,700 genera and species for which UPOV members have practical DUS experience
- 281 Test Guidelines adopted
- Note: 281 Test Guidelines estimated to cover 90% of PBR-related varieties in UPOV Plant Variety Database

PRIORITY for species or crops with high:

- number of authorities receiving PBR applications;
- number of PBR applications;
- number of foreign applications received by UPOV members;
- economic importance;
- level of breeding activity

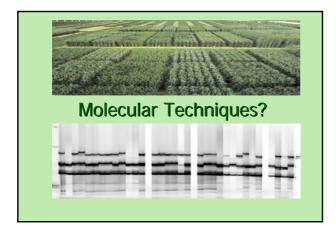

EXAMPLE (New Test Guidelines)

Test Guidelines: Plantus magnifica L. (Common name: Alpha)

Technical Working Party: **TWX**

TWX (2005):	Alpha (proj.1)
TWX (2006):	Alpha (proj.2)
TWX (2007):	Alpha (proj.3)
Enlarged Editorial Committee (2008):	Alpha (proj.4)
Technical Committee (2008):	Alpha (proj.5)
Final adopted document (2008):	TG/500/1

4. Situation in UPOV Concerning the possible use of Molecular Techniques in the DUS Examination

Legal and other considerations

- Conformity with the UPOV Convention
- Potential impact on the strength of protection

Technical considerations

- Reliability and robustness of techniques
- Accessibility of the technology
- Harmonization of methodologies
- Cost of examination
- Implications for breeders (e.g. cost and time involved for new uniformity requirements)

Harmonized approach

Harmonization

- ⇒ facilitates cooperation in DUS testing *e.g. purchase of DUS reports*
- ⇒ internationally recognized variety descriptions (effective protection)

E UPOVMUTTET ORIGNAL: Exploit Date: (Order 20, 2011 INTERNATIONAL UNION FOR THE PROTECTION OF NEW VARIETIES OF PLANTS OEDIYA	
POSSIBLE USE OF MOLECULAR MARKERS IN THE EXAMINATION OF DISTINCTNESS, UNIFORMITY AND STABILITY (DUS)	
adopted by the Council at its first-fifth unitary sension on thospher 20, 2011	

POSSIBLE APPLICATION MODELS

MODELS WITH A POSITIVE ASSESSMENT

- Characteristic-specific molecular markers
- Combining phenotypic and molecular distances in the management of variety collections
- [Calibrated molecular distances in the management of variety collections]

MODELS WITHOUT A POSITIVE ASSESSMENT

• Use of molecular marker characteristics

POSSIBLE APPLICATION MODELS

MODELS WITH A POSITIVE ASSESSMENT

Scharacteristic-specific molecular markers

- Combining phenotypic and molecular distances in the management of variety collections
- [Calibrated molecular distances in the management of variety collections]

MODELS WITHOUT A POSITIVE ASSESSMENT

Use of molecular marker characteristics

Model: characteristic-specific molecular markers

Example: gene specific marker for herbicide tolerance introduced by genetic modification

View of the BMT Review Group, Technical Committee, Administrative and Legal Committee:

on the basis of the assumptions in the proposal, acceptable within the terms of the UPOV Convention and would not undermine the effectiveness of protection offered under the UPOV system

Model: characteristic-specific molecular markers

- Assumptions for a gene specific marker:
- (a) **DUS examination**: same no. of plants, growing cycles, DUS criteria;
- (b) Linkage: ensure that the marker is a reliable predictor;
- (c) Different markers for same gene would be treated as different methods for examining the same characteristic;
- (d) Different genes would be treated as different methods for examining the same characteristic;
- (e) Different markers linked to different regulatory elements for the same gene would all be treated as different methods for examining the same characteristic.

matter for the relevant authority to consider if the assumptions are met

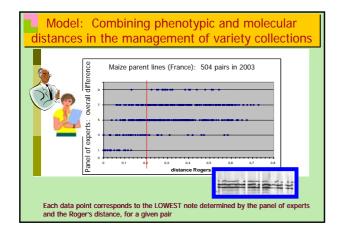

POSSIBLE APPLICATION MODELS

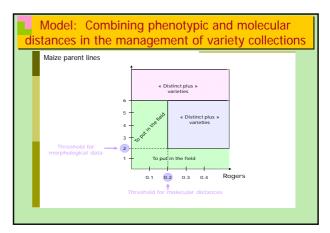

MODELS WITH A POSITIVE ASSESSMENT

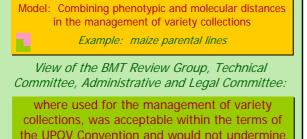

- Characteristic-specific molecular markers
- Combining phenotypic and molecular distances in the management of variety collections
- [Calibrated molecular distances in the management of variety collections]

MODELS WITHOUT A POSITIVE ASSESSMENT

Use of molecular marker characteristics

the UPOV Convention and would not undermine the effectiveness of protection offered under the UPOV system

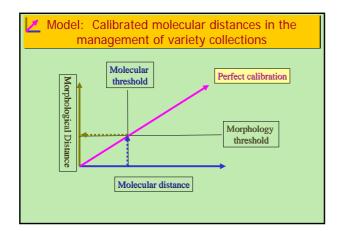

POSSIBLE APPLICATION MODELS

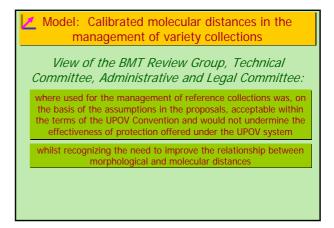

MODELS WITH A POSITIVE ASSESSMENT

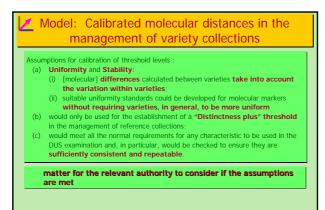

- Characteristic-specific molecular markers
- Combining phenotypic and molecular distances in the management of variety collections
- [Calibrated molecular distances in the management of variety collections]

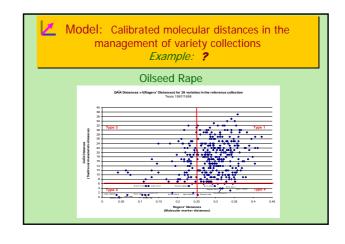

MODELS WITHOUT A POSITIVE ASSESSMENT

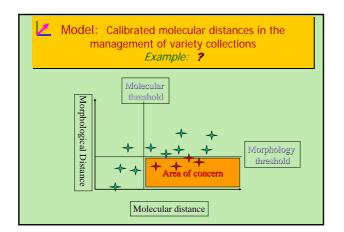

Use of molecular marker characteristics

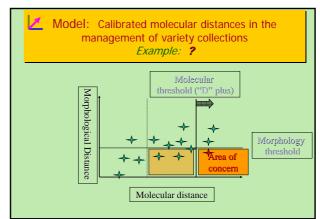

POSSIBLE APPLICATION MODELS

MODELS WITH A POSITIVE ASSESSMENT

- Characteristic-specific molecular markers
- Combining phenotypic and molecular distances in the management of variety collections
- [Calibrated molecular distances in the management of variety collections]

MODELS WITHOUT A POSITIVE ASSESSMENT

Use of molecular marker characteristics

Model: Use of molecular marker characteristics

View of the BMT Review Group, Technical Committee, Administrative and Legal Committee:

no consensus on the acceptability of the Option 3 proposals within the terms of the UPOV Convention and no consensus on whether they would undermine the effectiveness of protection offered under the UPOV system.
 concerns were raised that, in these proposals, using this approach, it might be possible to use a limitless number of markers to find differences between varieties. The concern was also raised that differences would be found at the genetic level which were not reflected in morphological characteristics

Harmonized approach

Harmonization

- ⇒ facilitates cooperation in DUS testing *e.g. purchase of DUS reports*
- ⇒ internationally recognized variety descriptions (effective protection)

Role of the BMT

The BMT is a group open to DUS experts, biochemical and molecular specialists and

- plant breeders, whose role is to: (i) Review general developments in biochemical and molecular technio
- (ii) Maintain an awareness of relevant applications of biochemical and molecular techniques in plant breeding; Consider the possible application of biochemical and molecular
- (iii)
- techniques in DUS testing and report its considerations to the TC; If appropriate, establish guidelines for biochemical and molecular methodologies and their harmonization [...]; (iv)
- Consider initiatives from TWPs, for the establishment of crop (v) specific subgroups [...];
- Develop guidelines regarding the management and harmonization of databases of biochemical and molecular information, in conjunction with the TWC; (vi)
- (vii) Receive reports from Crop Subgroups and the BMT Review Group; Provide a forum for discussion on the use of biochemical and molecular techniques in the consideration of essential derivation and variety identification. (viii)
