

Technical Working Party on Automation and Computer Programs TWC/39/8**Thirty-Ninth Session****Alexandria, United States of America, September 20 to 22, 2021****Original:** English**Date:** September 14, 2021

OPTICAL MARKERS: NEW TECHNOLOGY APPLIED FOR BARLEY, WHEAT & SOYBEANS VARIETY RECOGNITION*Document prepared by an expert from Argentina**Disclaimer: this document does not represent UPOV policies or guidance*

The annex to this document contains a copy of a presentation on “Optical Markers: new technology applied for barley, wheat & soybeans variety recognition”, prepared by an expert from Argentina, to be made at the thirty-ninth session of the TWC.

[Annex follows]

OPTICAL MARKERS

NEW TECHNOLOGY APPLIED FOR BARLEY, WHEAT & SOYBEANS VARIETY RECOGNITION

 Instituto Nacional de Semillas  @inaseargentina  www.argentina.gob.ar/inase

  Ministerio de Agricultura,
Ganadería y Pesca
Argentina

Via Image Processing, Artificial Intelligence and
Internet of Things.

 Instituto Nacional de Semillas  @inaseargentina  www.argentina.gob.ar/inase

1 – PHYSICAL PURE SAMPLES

Models are trained with pure samples provided by the breeders and seed companies.

In order to have strong and accurate models, the software needs to be trained with as much variability of sources, harvest year and location as possible.

 Instituto Nacional de Semillas  @inaseargentina  www.argentina.gob.ar/inase

2 - IMAGE DATABASE

Already has been digitized and built a database of more than 80 million images of different individual kernels of more than 200 varieties from different species from 18 different countries.

3 – ARTIFICIAL INTELLIGENCE CLASSIFICATION MODELS

After training their proprietary algorithms, the models are ready to identify and differentiate varieties in blind test samples.

4 – QUALITY SERVICE ANALYSIS

Once models are ready, the solution (software) is delivered to labs and sampling points via a hardware device to perform the tests.

The results are constantly being validated against traditional methods

Harvest after harvest it's adds new varieties that are being approved to be commercialized and more simples to add more variability to the varieties that were already included in the model

A Device with one side scanner that can identify varieties for Barley and Wheat.

1. The sample is placed on the scanner.
2. A down-side Scanner takes an image
3. Based on morphological features from the image, the software gives a result in three minutes

MALTING BARLEY VARIETY RECOGNITION

A Software (ZoomAgri®) that recognizes barley varieties within a sample by analysing morphological characteristics on a single-kernel basis.

MALTING BARLEY VARIETY RECOGNITION

Breeders, malsters, exporters, grain collectors, private laboratories and brewers have been using it for almost **four years with excellent feedback and acceptance.**

200 devices has already been installed at 17 different countries.

Some companies are already using the technology.

 Instituto Nacional de Semillas  @inaseargentina  www.argentina.gob.ar/inase

MALTING BARLEY VARIETY RECOGNITION Project Status

Latin America

- 92 ZoomAgri® devices installed
- Last harvest 65,000 analyses were done in Argentina (about 100% of malting barley production)
- Starting the process to obtain official approval from INASE

Europe

- 80 ZoomAgri® devices installed
- Ring tests with BIPEA and MEBAK to become specific method

 Instituto Nacional de Semillas  @inaseargentina  www.argentina.gob.ar/inase

WHEAT VARIETY RECOGNITION

Project Status

- Argentina: Identify and differentiate 32 different varieties and collecting samples to add more. Devices installed at Breeder labs, mills and at the laboratory that is the reference for identifying wheat varieties.

Two side scanner device that can identify Soybean Varieties

1. The sample is placed on the device.
2. The up-side Scanner takes an image
3. The software processes the image and gives a result in two minutes.

 

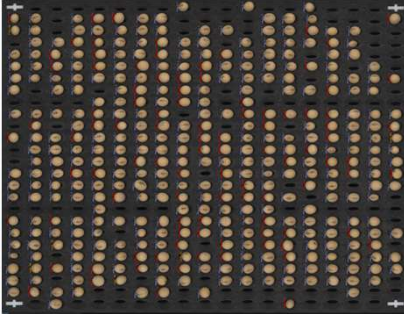

SOYBEANS VARIETY IDENTIFICACION

Project Status

- Argentina: In development together with the main seed companies. First version with excellent results differentiating 47 different varieties and collecting samples to add more.

 Instituto Nacional de Semillas  @inaseargentina  www.argentina.gob.ar/inase

The technology has the potential to be adapted to all species

 Instituto Nacional de Semillas  @inaseargentina  www.argentina.gob.ar/inase

INASE

Ganadería y Pesca
Argentina

One question arise: This
system complies with UPOV
Convention and the Argentine
Seed Law?
