VIII. Explanations on the Table of Characteristics	20
IX. Literature	22
X. Technical Questionnaire	23

I. Subject of these Guidelines

These Test Guidelines apply to all vegetatively propagated varieties for fruit production of *Rubus idaeus* L. and their hybrids as far as they are morphologically similar to *Rubus idaeus* L.

II. Material Required

1. The competent authorities decide when, where and in what quantity and quality the plant material required for testing the variety is to be delivered. Applicants submitting material from a State other than that in which the testing takes place must make sure that all customs formalities are complied with. As a minimum, the following quantity of plant material is recommended:

10 plants.

2. The plant material supplied should be visibly healthy, not lacking in vigor or affected by any important pests or diseases *and should especially be free from viruses as required by the competent authorities*. The plants supplied should have good root formation, with a satisfactory number of adventitious buds on the roots. It should preferably not be obtained from *in vitro* propagation. If it has been produced by *in vitro* propagation this fact has to be stated by the applicant.

(NZ): The TWF to rethink the requirement that plant material should preferably not be obtained from *in vitro* propagation, as this is nowadays a standard method for raspberry. In addition, to look at two fruiting seasons would (normally) overcome any juvenility or maturity issues that can be related to *in vitro* plants.

3. The plant material must not have undergone any treatment unless the competent authorities allow or request such treatment. If it has been treated, full details of the treatment must be given.

III. Conduct of Tests

1. To assess distinctness, it is essential that the plants under test bear at least two satisfactory crops of fruit.

2. The tests should normally be conducted at one place. If any important characteristics of the variety cannot be seen at that place, the variety may be tested at an additional place.

3. The tests should be carried out under conditions ensuring normal growth. As a minimum, each test should include a total of 10 plants. Separate plots for observation and for measuring can only be used if they have been subject to similar environmental conditions.

4. Additional tests for special purposes may be established.

IV. Methods and Observations

1. Unless otherwise stated, all observations determined by measurement, weighing or counting should be made on 10 plants or parts of 10 plants. All observations on the fruit should be made on 10 typical fruits.
2. For the assessment of uniformity, a population standard of 1% and an acceptance probability of 95% should be applied. In the case of a sample size of 10 plants the number of off-types would be 1.
3. All observations on the very young current season's shoot (characteristics 3 and 4) should be made when the shoots are 15 cm long. All observations on the current season's shoot (characteristics 5 to 8) should be made when the shoots are about 1 m to 1,50 m long. For summer bearing varieties these observations should be made just after harvest, for autumn bearing ones just before or at harvest. The bloom of the current season's shoot (characteristic 5) should only be observed when fully grown.
4. The number of young shoots should be observed as the number per meter length of row before thinning for the first time beginning with the second year.
5. The habit of all winter characteristics of the canes should be observed when the canes are dormant (after frost has occurred). If the canes peel, the dominant color should be the color of the bark **in an unpeeled area**.
6. **Observations on the bud should be made from the middle third of the shoot.**
(HU): To indicate when to observe the spines – 'All observations on the spines should be made when the the current season's shoot is 1-1,5 m long'.
7. All observations on the leaf should be made on fully developed leafs from the middle third of the shoot.
8. All observations on the fruit should be made on fruits collected during the second and third pickings.
9. All observations on the flower and the fruit as well as the length of the fruiting period should be recorded from the summer harvest only except for varieties whose main fruiting is on the current year's cane in autumn. For these varieties observations should be made during the autumn fruiting period.
10. The beginning of time of flowering should be observed when 10% of the flowers have opened.
11. The time of fruit ripening should be recorded as the time of first picking.

V. Grouping of Varieties

1. The collection of varieties to be grown should be divided into groups to facilitate the assessment of distinctness. Characteristics which are suitable for grouping purposes are those which are known from experience not to vary, or to vary only slightly within a variety. Their various states of expression should be fairly evenly distributed throughout the collection.
2. It is recommended that the competent authorities use the following characteristics for grouping varieties:
 - (a) Current season's shoot: anthocyanin coloration of apex (during rapid growth) (characteristic 3)
 - (b) Young shoot: spines (characteristic 11)
 - (c) Main fruiting (characteristic 34)
 - (d) Time of maturity for consumption on previous year's shoots (characteristic 38a)
or, respectively
Time of maturity for consumption on current year's shoots (characteristic 38b).

VI. Characteristics and Symbols

1. To assess distinctness, uniformity and stability, the characteristics and their states as given in the Table of Characteristics should be used.
2. Notes (numbers), for the purposes of electronic data processing, are given opposite the states of expression for each characteristic.
3. Legend:
 - (*) Characteristics that should be used on all varieties in every growing period over which examinations are made and always be included in the variety descriptions, except when the state of expression of a preceding characteristic or regional environmental conditions render this impossible.
 - (+) See Explanations on the Table of Characteristics in Chapter VIII.

VII. Table of Characteristics/Tableau des caractères/Merkmalstabelle/Tabla de caracteres

(NZ): To use the term "cane" instead of "shoot" through the whole document.

English	français	deutsch	español	Example Varieties Exemples Beispielssorten Variedades ejemplo	Note/ Nota
---------	----------	---------	---------	--	---------------

(GB): In order to keep char. recorded at the same time together, it should be checked whether char. 1 and 2 should be moved to 5 to 8.

1. (+)	Plant: attitude of shoots	Pflanze: Haltung der Triebe			
new	upright	aufrecht		Ontario, Watson	3
?	semi-semi-upright	halbaufrecht		Preußen, Schönemann, Autumn Bliss	5
	arching	hängend		Meeker, Malling Joy, Joan Squire	7

(PL): To clarify which shoots to look at and when (attitude of very young shoots or current season's shoots).

(PL): Characteristics 2 to 8 – to have the singular form "current season's shoot".

2. (*)	Plant: number of current season's [no. in shoots] TG/43/ 6: 3.]	Pflanze: Anzahl diesjähriger Ruten			
	few	wenig		Rubaca, Rucami	3
	medium	mittel		Multiraspa, Rumiloba, Glen Ample	5
	many	viele		Skeena, Glen Clova	7

3. (*)	Current season's shoot: anthocyanin coloration of apex [1.] (during rapid growth)	Diesjährige Rute: Anthocyansfärbung der Spitze (während des schnellen Wachstums)			
	absent	fehlend		Gelbe Antwerpener	1
	present	vorhanden		Malling Promise	9

(GB): Char. 3 and 4 – to have "young shoot" instead of "current season's shoot".

				Example Varieties	
	English	français	deutsch	español	Note/ Nota
4.	Current season's shoot: intensity of anthocyanin coloration of very young shoot (below apex) (during rapid growth)		Diesjährige Rute: Intensität der Anthocyanschönheit des sehr jungen Triebes (unterhalb der Spitze) (während des schnellen Wachstums)		
(*)					
[2.]					
	weak		gering	Rusilva, Rumiloba	3
	medium		mittel	Veten, Rucami, Cola 1	5
	strong		stark	Malling Joy, Rubaca	7
5.	Current season's shoot: intensity of bloom		Diesjährige Rute: Intensität der Bereifung		
[7.]					
	absent or very weak		fehlend oder sehr gering	Heritage, Willamette	1
	weak		gering	Malling Promise, Zefa 2	3
	medium		mittel	Malling Delight	5
	strong		stark	September, Glen Ample	7
	very strong		sehr stark	Ontario	9
6.	Current season's shoot: intensity of anthocyanin coloration		Diesjährige Rute: Intensität der Anthocyanschönheit		
new	absent or very weak		fehlend oder sehr gering		1
	weak		gering	Tulameen, Malling Leo	3
	medium		mittel	Malling Orion	5
	strong		stark	Rubaca, Rode Radboud	7

English	français	deutsch	español	Example Varieties Exemples Beispielssorten Variedades ejemplo	Note/ Nota
7. Current season's shoot: length of internode		Diesjährige Rute: Internodienlänge			
new	short	kurz		Gevalo, Sirius, Baronne de Wavre	3
	medium	mittel		Schönemann, Preußen	5
	long	lang		Caliber, Malling Joy	7
8. Current season's shoot: length of bud		Diesjährige Rute: Länge der Knospe			
(+)	short	kurz		Wilkran	3
	medium	mittel		Malling Admiral	5
	long	lang		Phyllis King, Baronne de Wavre	7
(NZ): To be more precise what to look at (length of what?).					
9a. <u>Only varieties whose main fruiting is on previous year's shoot in summer:</u> Dormant shoot: length		Nur Sorten, die ihre Haupternte an der Vorjahresrute im Sommer erbringen: Winterrute: Länge			
(*)	short	kurz		Loganlike	3
[9.]	medium	mittel		Zefa 2	5
	long	lang		Meeker, Schönemann	7
9b. <u>Only varieties whose main fruiting is on current season's shoot in autumn:</u> Current season's shoot: length		Nur Sorten, die ihre Haupternte an der Jahresrute im Herbst erbringen: Jahresrute: Länge			
(*)	short	kurz		Orange Marie	3
[8.]	medium	mittel		Dinkum, September	5
	long	lang		Watson	7

English	français	deutsch	español	Example Varieties Exemples Beispielsorten Variedades ejemplo	Note/ Nota
10. (*) <u>Only varieties whose main fruiting is on previous year's shoot in summer:</u> Dormant shoot: color		Nur Sorten, die ihre Haupternte an der Vorjahresrute im Sommer erbringen: Winterrute: Farbe			
greyish brown		graubraun		Schönemann	1
greyish brown to brown		graubraun bis braun		Willamette	2
brown		braun		Caliber, Rucami	3
brown to purple brown		braun bis purpurbraun		Malling Landmark, Festival, Cola 1	4
purple brown		purpurbraun		Titan, Royalty	5
(PL): Characteristics 11 and 12 – to replace "young shoot" by "current season's shoot" and to keep the char. where they are now, or, alternatively, to keep the wording and move char. 11, 12, 13 and 15 just after char. 4.					
11. (*) [4.] Young shoot: spines		Jungtrieb: Stacheln			
absent		fehlend		Glen Moy	1
present		vorhanden		Malling Promise	9
12. (*) [5.] Young shoot: density of spines on middle third (if present)		Jungtrieb: Dichte der Stacheln im mittleren Drittel (wenn vorhanden)			
sparse		locker		Spica, Malling Orion, Rafzmach	3
medium		mittel		Multiraspa, Zefa 2	5
dense		dicht		Malling Exploit, Autumn Bliss	7

	Reference Number (not to be filled in by the applicant)
TECHNICAL QUESTIONNAIRE to be completed in connection with an application for plant breeders' rights	
1. Species	<i>Rubus idaeus L.</i> RASPBERRY (fruit varieties only)
2. Applicant (name and address)	
3. Proposed denomination or breeder's reference	

4. Information on origin, maintenance and reproduction of the variety

4.1 Origin

- (a) Seedling of unknown parentage []
- (b) Produced by controlled pollination []
(indicate parent varieties)
– Seed bearing parent (indicate parent) []
.....
– Pollen parent (indicate parent) []
.....
- (c) Produced by open pollination of []
(indicate seed bearing parent plant)
.....
- (d) Mutation or sport from (indicate original parent variety) []
.....
- (e) Discovery (indicate where and when) []
.....

4.2. *In vitro* propagation:

The plant material of the candidate variety has been obtained
by *in vitro* propagation

yes []
no []

4.3 Other type of multiplication (seed, leaf cutting, hardwood cutting, layer) []

4.4 Virus status:

- (a) The variety is free from all known virus as follows
(indicate from which viruses) []

.....

- (b) The plant material is virus tested
(indicate against which virus) []

.....

- (c) The virus status is unknown []

4.5 Other information:

5. Characteristics of the variety to be indicated (the number in brackets refers to the corresponding characteristic in Test Guidelines; please mark the state of expression which best corresponds).

Characteristics	Example Varieties	Note
5.1 Plant: number of current season's shoots (2)		
few	Rubaca, Rucami	3[]
medium	Multiraska, Rumiloba, Glen Ample	5[]
many	Skeena, Glen Clova	7[]
5.2 Current season's shoot: anthocyanin coloration of apex (during rapid growth) (3)		
absent	Gelbe Antwerpener	1[]
present	Malling Promise	9[]
5.3 Only varieties whose main fruiting is on previous year's shoot in summer: Dormant shoot: color (10)		
greyish brown	Schönemann	1[]
greyish brown to brown	Willamette	2[]
brown	Caliber, Rucami	3[]
brown to purple brown	Malling Landmark, Festival, Cola 1	4[]
purple brown	Titan, Royalty	5[]
5.4 Young shoot: spines (11)		
absent	Glen Moy	1[]
present	Malling Promise	9[]
(HU): To delete this characteristic in the Technical Questionnaire.		

Characteristics	Example Varieties	Note
5.5 Fruit: size (28)		
very small	Baumforth Seedling	1[]
small	Preußen, Zenith	3[]
medium	Spica, Willamette	5[]
large	Glen Moy, Malling Delight, Gevalo	7[]
very large	Glen Ample	9[]
5.6 Fruit: ratio length/width (30)		
as long as broad	Zefa 2, Caliber	1[]
longer than broad	Glen Clova	2[]
much longer than broad	Malling Delight, Tulameen	3[]
5.7 Fruit: color (31)		
yellow	Gelbe Antwerpener, Golden Bliss	1[]
orange	Orange Marie	2[]
light red	Malling Delight	3[]
medium red	Glen Clova, Malling Orion	4[]
dark red	Gigant, Schönemann, Zefa 2	5[]
purple	Royalty	6[]
black purple	Deep Purple	7[]
5.8 Main fruiting (34)		
on previous year's shoot in summer	Malling Promise	1[]
on current year's shoot in autumn	Autumn Bliss	2[]

Characteristics	Example Varieties	Note
5.9 Time of maturity for consumption on previous year's shoots (38a)		
very early		1[]
early	Glen Clova, Glen Moy, Rafzmach	3[]
medium	Willamette, Rusilva	5[]
late	Schönemann, Malling Landmark	7[]
very late	Malling Leo	9[]
5.10 Time of maturity for consumption on current year's shoots (38b)		
very early	Ariadne	1[]
early	Polana	3[]
medium	Orange Marie, Watson	5[]
late	Korbfüller	7[]
very late	Baronne de Wavre	9[]

6. Similar varieties and differences from these varieties

Denomination of similar variety	Characteristic in which the similar variety is different ^{o)}	State of expression of similar variety	State of expression of candidate variety

^{o)} In the case of identical states of expressions of both varieties, please indicate the size of the difference.

7. Additional information which may help to distinguish the variety

7.1 Resistance to pests and diseases

7.2 Special conditions for the examination of the variety

7.3 Other information

A representative color photo of the variety should be included in the Technical Questionnaire.

8. Authorization for release

(a) Does the variety require prior authorization for release under legislation concerning the protection of the environment, human and animal health?

Yes [] No []

(b) Has such authorization been obtained?

Yes [] No []

If the answer to that question is yes, please attach a copy of such an authorization.

[End of document]
