INTERNATIONAL UNION FOR THE PROTECTION OF NEW VARIETIES OF PLANTS

Geneva

TECHNICAL WORKING PARTY FOR FRUIT CROPS

Forty-Third Session
Beijing, July 30 to August 3, 2012

REVISION OF DOCUMENT TGP/14:
 Section 2: Botanical Terms
 Subsection 3: Color

Document prepared by experts from Germany and the Netherlands

BACKGROUND

1. The Technical Committee (TC), at its forty-eighth session, held in Geneva from March 26 to 28, considered the draft of Section 2: Botanical Terms, Subsection 3: Color, as set out in the Annex to document TC/48/21.
2. The TC, at its forty-eighth session, agreed that a new draft, based on the document TC/48/21 and the comments of the Technical Working Parties (TWPs), should be prepared by the experts from Germany and the Netherlands, for consideration by the TWPs at their sessions in 2012.
3. The comments of the TWPs on the text in document TC/48/21 were as follows:

General	The TWA noted the modifications made to document TWA/40/16 Rev. With regard to "Section 2: Botanical Terms, Subsection 3: Color", contained in the Annex to document TWA/40/16 Rev.	TWA
	<p>The TWC considered document TWC/29/16.</p> <p>The TWC noted that different color groups, as established in Section 3 of Annex I of document TWC/29/16, were not created for the purpose of grouping varieties for DUS trials and should not be used for that purpose.</p> <p>The TWC agreed to invite papers on how information on colors is used for DUS examination for presentation at the next session of the TWC and to inform other Technical Working Parties.</p>	TWC
	With regard to the comments of the Technical Working Party on Automation and Computer Programs (TWC), at its twenty-ninth session, held in Geneva, from June 7 to 10, 2011 (see paragraph 6 of this document), the TWO and the TWF noted that the reference to inviting papers on how information on colors is used for DUS examination referred to the use of image analysis to assess color.	TWO TWF

1.	<p>To add an explanation that “Color is complex and can be defined in terms of three main elements: HUE (distinguishes the different colors), SATURATION (the element of color that indicates the purity or grayness of the color) and the BRIGHTNESS (distinguishes the total amount of light that is reflected by the color, how the color is perceived by the eye on the dark to light scale).”</p> <p>In addition, to explain that, in some circles (e.g. industry), it is common practice to use a separation of two elements of color: COLOR and INTENSITY (= brightness): one-color; self-colored etc., but that such an approach is not necessarily followed in the Test Guidelines.</p>	TWO TWF
2.	The TWV considered that the new section for color characteristics should include guidance that the Test Guidelines should provide an explanation of the use of color terms that did not follow generally accepted rules, e.g. the use of “red” in onion for “purple” colors.	TWV
2.	The TWO and the TWF did not agree with the proposal made by the TWV at its forty-fifth session, that the new section for color characteristics should include guidance that the Test Guidelines should provide an explanation of the use of color terms that did not follow generally accepted rules, e.g. the use of “red” in onion for “purple” colors.	TWO TWF
2.1	To be revised in accordance with changes below.	TWO TWF
2.2	To explain that the level of precision of color used in states of expression will vary according to the circumstances. For example, the following states of expression reflect differing levels of precision: yellow; yellow orange; yellowish orange; light yellow; RHS Colour Chart reference.	TWO TWF
2.3	Title to read “2.3 <i>Observation of color</i> ”	TWO TWF
2.4.1	To be reviewed in accordance with changes to 2.2.	TWO TWF
3.	To provide introduction based on Section 3.3	TWO TWF
3.1	To be deleted	TWO TWF
3.2.1	To amend the example to read: “The main color is the color with the largest surface area. In cases where the areas of the main and secondary color are approximately the same [the darkest color] / [the color..[location]...] is considered to be the main color.”	TWO TWF
3.2.1	(a) GROUND COLOR: to explain that “Ground color” can be used in the following ways: (i) For organs which have two independent layers of tissue containing color pigmentation (e.g. apple), the two layers could be described as follows: “The ground color is the first color to appear chronologically during the development of the plant part. Other	TWO TWF

	<p>colors may develop in time in the form of spots, blotches, or a color flush or blush”</p> <p>(ii) The ground color of the upper side is the color that is the main color of the lower side of an organ.</p> <p>(iii) The ground color is the color which has a continuous dispersion across the surface of the plant part.</p> <p>It should also be explained that the ground color is not always the color occupying the largest surface area of the plant part concerned. It should also be explained, where appropriate, that the ground color is not always visible.</p>	
3.2.3	Example 1: to delete “Only varieties with one color:”	TWO TWF
3.2.4	<p>To add the example provided in document TG/HEUCH(proj.4) Example 1. to read “Leaf blade : secondary color (if present)” (TWF).</p> <p>The RHS 203D is indicated as the highest in the ordering of the color charts. However, 203D is not included in Appendix I to Annex I on page 29. This is because the table in Appendix I does not include the 2007 edition of the charts. To update the paragraph as follows (changes highlighted in yellow):</p> <p>“The colors are then ordered from the lowest to highest number according to the color number from the Colour Chart, with the lowest number being RHS 1 A and the highest number being RHS 202D. Additional cards in new editions of the RHS Colour charts may increase the highest number. With this approach the determination of color is made without consideration of the surface area occupied by that color.</p> <p>The following standard explanation should be included in the Test Guidelines when using this approach for describing color: The order of colors follows the RHS Colour Chart order. For example, in the RHS Colour charts 2001 edition, the lowest number is RHS 1A and the highest RHS 202D.”</p>	TWO TWF TWF
3.2.5	The TWA recommended that the new proposal for subsection 3.2.5 “Variegation” be redrafted to avoid the impression that variegation is only limited to white and yellow color.	TWA
3.2.5	To delete new proposal: "Variegation" is the term for white or yellow colored zones on the leaf with diminished or no chlorophyll. These zones can have different shapes; they occur as longitudinal stripes, as irregularly shaped areas or along the margin of a leaf. They are contrasting with the usual green color of the leaf.	TWO TWF
3.2.7	To delete “In some cases conspicuousness could be difficult to be observed, for instance for small organs (e.g. veins, hairs), or because they are not consistently expressed across the organ	TWO TWF
3.2.(=3.3)	To be moved to become the introduction to Part III	TWO TWF
4.1	To be reviewed	TWO TWF
4.2	To be deleted	TWO TWF

4.3	<p>To use the schematic illustration of the different color patterns in Annex II to define terms for pattern, with necessary amendments, e.g. addition of missing terms from Sections 4.3.2 to 4.3.6 and modification of “central band” to “transverse band”.</p> <p>To incorporate the schematic in Annex II into the main document.</p> <p>Sections 4.3.2 to 4.3.6 to be replaced by schematic in Annex II.</p>	TWO TWF
4.3.2	<p>The proposal from New Zealand to read as follows:</p> <p>DOTTED: having clear, regular, very small spots</p> <p>PATCHED: having clear, irregular, medium spots</p> <p>BLOTCHED: having clear, irregular, large spots</p> <p>FLECKED: having diffuse, irregular, small spots</p> <p>SPECKLED: having diffuse, irregular, medium spots</p> <p>MOTTLED: having diffuse, irregular, large spots</p>	TWC
4.5	<p>To check for consistency with Annex II / revised Section 4.3</p> <p>To amend spelling of “BASAL THREE QUARTERS” in Section 4.5.2.</p>	TWO TWF
5	To check for consistency with Annex II / revised Section 4.3	TWO TWF
Annex I	<p>To update to include reference to latest RHS Colour Chart version</p> <p>To delete paragraph 1.3</p>	TWO TWF
Annex I	To check Spanish translation of colors in Appendix	TWF

4. The TC also agreed that a website reference for the Royal Horticultural Society should be included in Part VI: Literature.

5. The new Draft for Subsection 3: Color prepared by experts from Germany and the Netherlands is contained in the Annex to this document.

ANNEX: COLOR NAMES FOR THE RHS COLOUR CHART

- Appendix I: Allocation of UPOV Color Groups for each RHS Color in RHS Reference order
- Appendix II: RHS Colors contained in each UPOV Color Group

SUBSECTION 3: COLOR

PART I: INTRODUCTION

1. The purpose of this document is:
 - (a) To provide guidance on the development of characteristics related to colors and color patterns;
 - (b) To provide standard illustrations and examples in relation to colors and color patterns which may be useful for inclusion in the Test Guidelines, whilst noting that illustrations for specific characteristics can be found in the relevant Test Guidelines and noting that searches for relevant individual characteristics can be made through TGP/7 “Collection of Approved Characteristics”; and
 - (c) To provide definitions of botanical terms with an indication of whether those terms are generally used in Test Guidelines, or whether alternative terms might be more appropriate for use in Test Guidelines.

Color is complex and can be defined in terms of three main elements: HUE (distinguishes the different colors), SATURATION (the element of color that indicates the purity or grayness of the color) and the INTENSITY (distinguishes the total amount of light that is reflected by the color, how the color is perceived by the eye on the dark to light scale).

For describing colors of plants in test guidelines, it is the usual practice to observe two of the three elements, COLOR and INTENSITY. SATURATION is effectively incorporated into the observation of COLOR.

PART II: COLOR

2.1 Terms used for color

The terms used to describe color can be a single color, a color range, the intensity of a color and the RHS Colour Chart Number. These terms have different levels of precision:

		state of expression	example
 level of precision	low	single color	yellow, orange, red
		color range	(a) yellow, yellow orange, orange, orange red, red (b) white, yellowish white, yellow, yellowish orange
		intensity	light yellow, medium yellow, dark yellow, light orange, medium orange
	high	RHS Colour Chart No.	RHS 41 B

According to the plant species, the organ observed and the level of variation within and between the varieties the drafter of a TG has to decide which level of precision is useful for the characteristic. In species where only a limited number of clearly different colors of an organ are feasible, a description of the single color would be appropriate (see 2.2.1).

In species where many similar colors are possible the use of the RHS Colour Chart would be appropriate (see 2.2.4). However, if the size of the colored surface or the amount of color is very small, where other surface elements influence the observation, colors are blended or not well represented on the chart, the use of a color chart might not be possible or sensible. The same is true when an overall impression of the color is required.

2.2 States of expression for color characteristics

2.2.1 Single color

A single color has the lowest precision to describe the state of expression.

Example: Flower: color: white (1); yellow (2); orange (3); red (4)

2.2.2 Color range

By using color combinations together with single colors (= color range) the state of expression can be described more precisely than with single colors only.

(a) In color combinations the second color indicates the predominant color with blending of both colors, resulting in what can look like a single color. For example in "green red" the predominant color is red and in "red green" the predominant color is green.

Example: Flower: color: white (1); yellow white (2); yellow (3); yellow orange (4); orange (5)

(b) The use of "ish" in color combinations indicates that there is a predominant color (e.g. yellow) together with another minor color. For example,

yellowish, covers all colors which are predominantly yellow (would include, for example, white yellow; brown yellow; orange yellow; etc.)

yellowish green covers all colors which are predominantly green with some yellow (would include, for example, white yellow green; brown yellow green; orange yellow green etc.)

Example: Flower: color: whitish (1); yellowish (2); greenish (3)

2.2.3 Intensity

Depending on the organ described the intensity can be presented either alone (example 1) or in combination with the color (example 2).

Example 1: Leaf: green color of upper side: light (3); medium (5); dark (9)

Example 2: Flower: color: white (1); light yellow (2); medium yellow (3); dark yellow (4); orange (5)

2.2.4 Color Chart

If it is necessary to describe a color with a color chart, UPOV uses the color chart from the Royal Horticultural Society (RHS), the "RHS Colour Chart" because of its worldwide availability. There are 5 editions of this color chart, dating from 1966, 1986, 1995, 2001 and 2007. Since 2005, the "RHS Mini Colour Chart" has also been published by the Flower Council Holland and is also frequently used by breeders. Other color charts might also be appropriate.

Document TGP/7 "Development of Test Guidelines" (see ASW 4(2)(d)) explains that "Because daylight varies, color determinations made against a color chart should be made either in a suitable cabinet providing artificial daylight or in the middle of the day in a room without direct sunlight. The spectral distribution of the illuminant for artificial daylight should conform with the CIE Standard of Preferred Daylight D 6500 and should fall within the tolerances set out in the British Standard 950, Part I. These determinations should be

made with the plant part placed against a white background". When it is not possible to make observations under artificial daylight, for example when observations have to be made in the open, observations should not be made in direct sunlight. The observations should be made on a cloudy day with sufficient light intensity, or in a shaded area. When artificial shading is needed in the open, it should be ensured that the color of the shading cloth does not interfere with the observations.

When using the RHS Colour Chart, the reference number of the RHS color, the color name and the edition of the chart should be mentioned in the variety description. **A proposal for naming the colors** has been made in the **ANNEX** of this document.

2.3 Developing characteristics

2.3.1 Type of expression

As explained in the introduction, color is complex and can be defined in terms of 3 main elements: hue, saturation and intensity. Therefore, any characteristic which combines more than one of those elements is likely to constitute a pseudo-qualitative characteristic. However, in those cases in which only the intensity of a color varies, the type of expression would be quantitative. In those cases where there is a low precision and a clear discontinuity between the colors (e.g. white and red), the type of expression would be qualitative.

Examples

(a) Qualitative characteristics

Stem: color: green (1); red (2)

(b) Quantitative characteristics

Leaf: intensity of green color: light (3); medium (5); dark (7)

(c) Pseudo-qualitative characteristics

(i) Single colors

Flower: color: white (1); yellow (2); orange (3); red (4)

(ii) Single colors and intensity

Flower: color: white (1); light yellow (2); medium yellow (3); dark yellow (4); orange (5)

(iii) Color combination

Flower: color: white (1); yellow white (2); yellow (3); yellow orange(4); orange (5)
Spathe: color of apex: whitish (1); yellowish (2); greenish (3)

(iv) Color chart

Flower: color: RHS Colour Chart (indicate reference number)

→ variety description: RHS 11D – light yellow orange

2.3.2 Order of states of expression

In the Test Guidelines, the states of expression for colors are normally presented in the following order: white, green, yellow, orange, pink, red, purple, violet, blue, brown, black (note: it is quite common to have the order white, yellow, green where only those colors occur). However, the chronological appearance of the color (e.g. as the fruit ripens) may also be used (see also document TGP/14/1 "Glossary of Technical, Botanical and Statistical Terms Used in UPOV Documents" [*cross ref.*]) where appropriate. The same sequence should normally be used for organs with similar states within the same Test Guidelines (e.g. color of leaf and color of the stem).

2.4 Unsuitable color names

Color terms such as "bronze", "fuchsia", "gold", "ochre", "salmon", "silver", etc. should not be used as states of expression in the Test Guidelines because they could cause confusion concerning the intended color. Therefore, these terms should be replaced by standard colors (e.g. orange brown instead of bronze).

2.5 Timing of observations

2.5.1 All color observations on the different organs of the plant should be made at a clearly defined stage of development of the organ. Color expression of the organ might change, for example, during development or aging of the plant/organ or the time of the day.

2.5.2 In cases where the color of an organ changes during the development of the plant, it may be appropriate to have separate characteristics for the color at appropriate, clearly defined stages of development. In some cases, it may also be appropriate to have a characteristic which describes the rate at which the color changes.

2.6 Organ elements that may distort color

The observation of color on a surface or whole organ can be distorted by the presence of glaucosity or hair. The characteristic should make it clear whether or not the overall color is observed or the color surface after the glaucosity or hair has been removed.

Example: Fruit: color of skin (hair removed)
Leaf: color of upper side (wax removed)

PART III: APPROACHES TO DESCRIBE COLORS AND COLOR PATTERNS

The decision on which approach to use when describing the colors of a plant part depends on the number of colors, the types of color distribution and the number of color patterns which are possible for the species concerned.

- (a) In situations where only a few colors, a few types of color distribution and a few patterns need to be described, it would be appropriate to use an approach in which the colors are described according to the size of the surface area they cover (see 3.1). A good example of the use of this approach can be found in the *Alstroemeria* Test Guideline (TG/29/7).
- (b) In cases where certain organs have two layers of tissue containing color pigmentation, and one layer is covering the other, it may be appropriate to use an approach in which the ground color and the over color are described (see 3.2). An example can be found in the *Apple* Test Guideline (TG/14/9) and the *Phalaenopsis* Test Guideline (TG/213/2(proj.4)).
- (c) In cases where the different parts of an organ can have different colors, it could be appropriate to describe the color of these parts separately (see 3.3). An example for this approach can be found in the *Torenia* Test Guideline (TG/172/1).
- (d) For complex situations where several different colors and/or several different types of color distribution and color patterns are possible, it would be more appropriate to use an approach in which the different colors are described according to their order in the RHS Colour Chart ("Lisbon" approach (see 3.4)). An example for this approach can be found in the *Heuchera* Test Guideline (TG/HEUCH (proj.3)).

3.1 Approach according to the size of the surface area

In this approach all colors of a plant part are determined according to the size of the surface area they occupy. The color with the largest surface area is the main color; the one with the second largest area is the secondary color and so on.

The following standard explanation should be included in the Test Guidelines when using this approach for describing color:

"The main color is the color with the largest surface area. In cases where the areas of the main and secondary color are approximately the same [the darkest color] / [the color...[location]...] is considered to be the main color."

3.2 Approach according to tissue layers

When an organ has two layers of tissue containing color pigmentation and one layer is covering the other, the colors of the two layers can be described as ground color and over color. The term ground color can be used in different ways:

(a) **Ground color:**

(i) The ground color is the first color to appear chronologically during the development of the plant part. Other colors may develop in time in the form of spots, blotches, or a flush.

(ii) The ground color is the color which has a continuous dispersion across the surface of the plant part.

The ground color is not always the color occupying the largest surface area of the plant part concerned. For certain organs having two layers of tissue containing color pigmentation, and one layer is covering the other on the upper side of the organ it may be appropriate to determine the ground color by observing the main color of the lower side of the organ (see example *Phalaenopsis*).

Example: Phalaenopsis (TG/213/2(proj.4))

Petal: ground color – RHS Colour Chart 155A - white

Petal: over color – RHS Colour Chart 83A - darkviolet

(b) **Over color:**

In the case of a plant part which has a ground color upon which a second color such as a flush develops over time, the flush is considered the over color. The over color is not always the color occupying the smallest surface area of the plant part concerned.

Example: Apple (TG/14/9)

Fruit: ground color:

not visible (1), whitish yellow (2), yellow (3), whitish green (4), yellow green (5), green (6)

Fruit: hue of over color - with bloom removed

orange red (1), pink red (2), red (3), purple red (4), brown red (5)

3.3 Approach according to defined parts of an organ

- (a) If the different parts of a plant organ can have different colors, the color of these different parts can be described separately. If for example the petals can have a differently colored margin and a differently colored base, the color of the margin and the color of the base should be described in separate characteristics.

Example: Petal: color of margin

Petal: color of middle zone

Petal: color of base

- (b) When an organ has one color with different intensities, the parts of the organ which are lighter or darker could be described as follows:

*Example: Ray floret: color distribution on upper side (PQ):
lighter towards base (1); even (2); lighter towards apex (3)*

3.4 Approach according to the RHS Colour Chart number ("Lisbon" approach)

In this approach all colors of the plant part concerned are assessed using the RHS Colour Charts first. The colors are then ordered from the lowest to highest number according to the color number from the Colour Chart, with the lowest number being RHS 1 A and the highest number being RHS 203 D. Additional cards in new editions of the RHS Colour charts may increase the highest number. In this approach the determination of color is made without consideration of the surface area occupied by that color.

The following standard explanation should be included in the Test Guidelines when using this approach for describing color:

The order of colors follows the RHS Colour Chart order. For example, in the RHS Colour charts 2007 edition, the lowest number is RHS 1A and the highest RHS 203D.

The color should first be described, followed by characteristics explaining the area, distribution, pattern and if necessary the conspicuousness of the color.

The same sequence should be followed for color two, color three and so on. In order to make it clear that a variety does not show color two, color three and so on, the state of expression 'none' (1) should be added as an option to the characteristic.

Example: Heuchera (TG/HEUCH(proj.3)).

In *Heuchera* and *xHeucherella* leaf color is very significant to the overall appearance of the variety. Leaves often have several colors in different patterns and the expression of these colors and patterns can change from the young leaves to the fully expanded leaves.

Although the colors are referred to as "color one", "color two", "color three" and "color four" in the headings, this does not indicate a ranking according to prominence or area covered. The order in which the colors should be observed is dictated by the order the colors appear in the RHS Colour Chart.

In order to provide an illustration of the recording method, two worked examples are provided below. The first describes a leaf with only one color, the second a leaf with several colors.

Worked Example One – 'Pistache'(variety with only one leaf color)

36. Leaf blade: color one – RHS Colour Chart – Yellow-Green 151C
37. Leaf blade: color one: distribution – throughout (8)
38. Leaf blade: color one: pattern – solid or nearly solid (5)
39. Leaf blade: color one: total area – very large (9)
40. Leaf blade: color two – RHS Colour Chart – not applicable
41. Leaf blade: color two: distribution – none (1)
42. Leaf blade: color two: pattern – not applicable
43. Leaf blade: color two: total area – not applicable
44. Leaf blade: color three – RHS Colour Chart – not applicable
45. Leaf blade: color three: distribution – none (1)
46. Leaf blade: color three: pattern – not applicable
47. Leaf blade: color three: total area – not applicable
48. Leaf blade: color four – RHS Colour Chart – not applicable
49. Leaf blade: color four: distribution – none (1)
50. Leaf blade: color four: pattern – not applicable
51. Leaf blade: color four: total area – not applicable

Worked Example Two – 'Venus' (variety with several leaf colors)

- 36. Leaf blade: color one – RHS Colour Chart – Yellow-Green 144C
- 37. Leaf blade: color one: distribution – marginal zone (7)
- 38. Leaf blade: color one: pattern – solid or nearly solid (5)
- 39. Leaf blade: color one: total area – very small to small (2)
- 40. Leaf blade: color two – RHS Colour Chart – Greyed-Orange 176B
- 41. Leaf blade: color two: distribution – along veins (2)
- 42. Leaf blade: color two: pattern – solid or nearly solid (5)
- 43. Leaf blade: color two: total area – small (3)
- 44. Leaf blade: color three – RHS Colour Chart – Greyed-Orange 177D but more grey
- 45. Leaf blade: color three: distribution – between veins in intermediate zone (6)
- 46. Leaf blade: color three: pattern – solid or nearly solid (5)
- 47. Leaf blade: color three: total area – large (7)
- 48. Leaf blade: color four – RHS Colour Chart – not applicable
- 49. Leaf blade: color four: distribution – none (1)
- 50. Leaf blade: color four: pattern – not applicable
- 51. Leaf blade: color four: total area – not applicable

3.5 Special terms used for color characteristics

3.5.1 Variegation

Variegation: Well defined areas of different colors or intensities, with less or no chlorophyll, especially as very light green, yellow or white longitudinal stripes or irregular shaped areas or marginal zone combined with a green color on leaves.

3.5.2 Pigments (anthocyanin, carotenoid)

Color pigments like anthocyanin usually can be found on a plant organ or part of an organ in the form of an over color. Depending on the amount and intensity of the pigments it could be useful to describe the color of the organ with or without the pigments. If the pigments should be excluded from the observation it should be indicated in the characteristic (e.g. Leaf blade: color (excluding anthocyanin)).

When the name of the pigment is known, reference should be made to the name, e.g. “anthocyanin coloration”. Where the name of the pigment is not known, the color should be mentioned, e.g. “red coloration”.

Pigments can be described using intensity and /or size of their distribution.

*Example: Leaf blade: anthocyanin coloration (QN):
weak (3); medium (5); strong (7)*

*Example: Leaf blade distribution of anthocyanin coloration (PQ):
at margin (1); along veins (2); at base (3)*

3.5.3 Conspicuousness

CONSPICUOUS: clearly visible, evident.

INCONSPICUOUS: not clearly visible, obscure.

To make clear what is meant with the term conspicuousness the following standard wording could be used in the TG:

- (a) The conspicuousness is determined by the color contrast
- (b) The conspicuousness is determined by the color contrast combined with size.

3.6 Color change over time

When a plant organ changes the color over time it might be necessary to observe the same organ at different times of its development.

Example:

Fruit: color (before maturity)

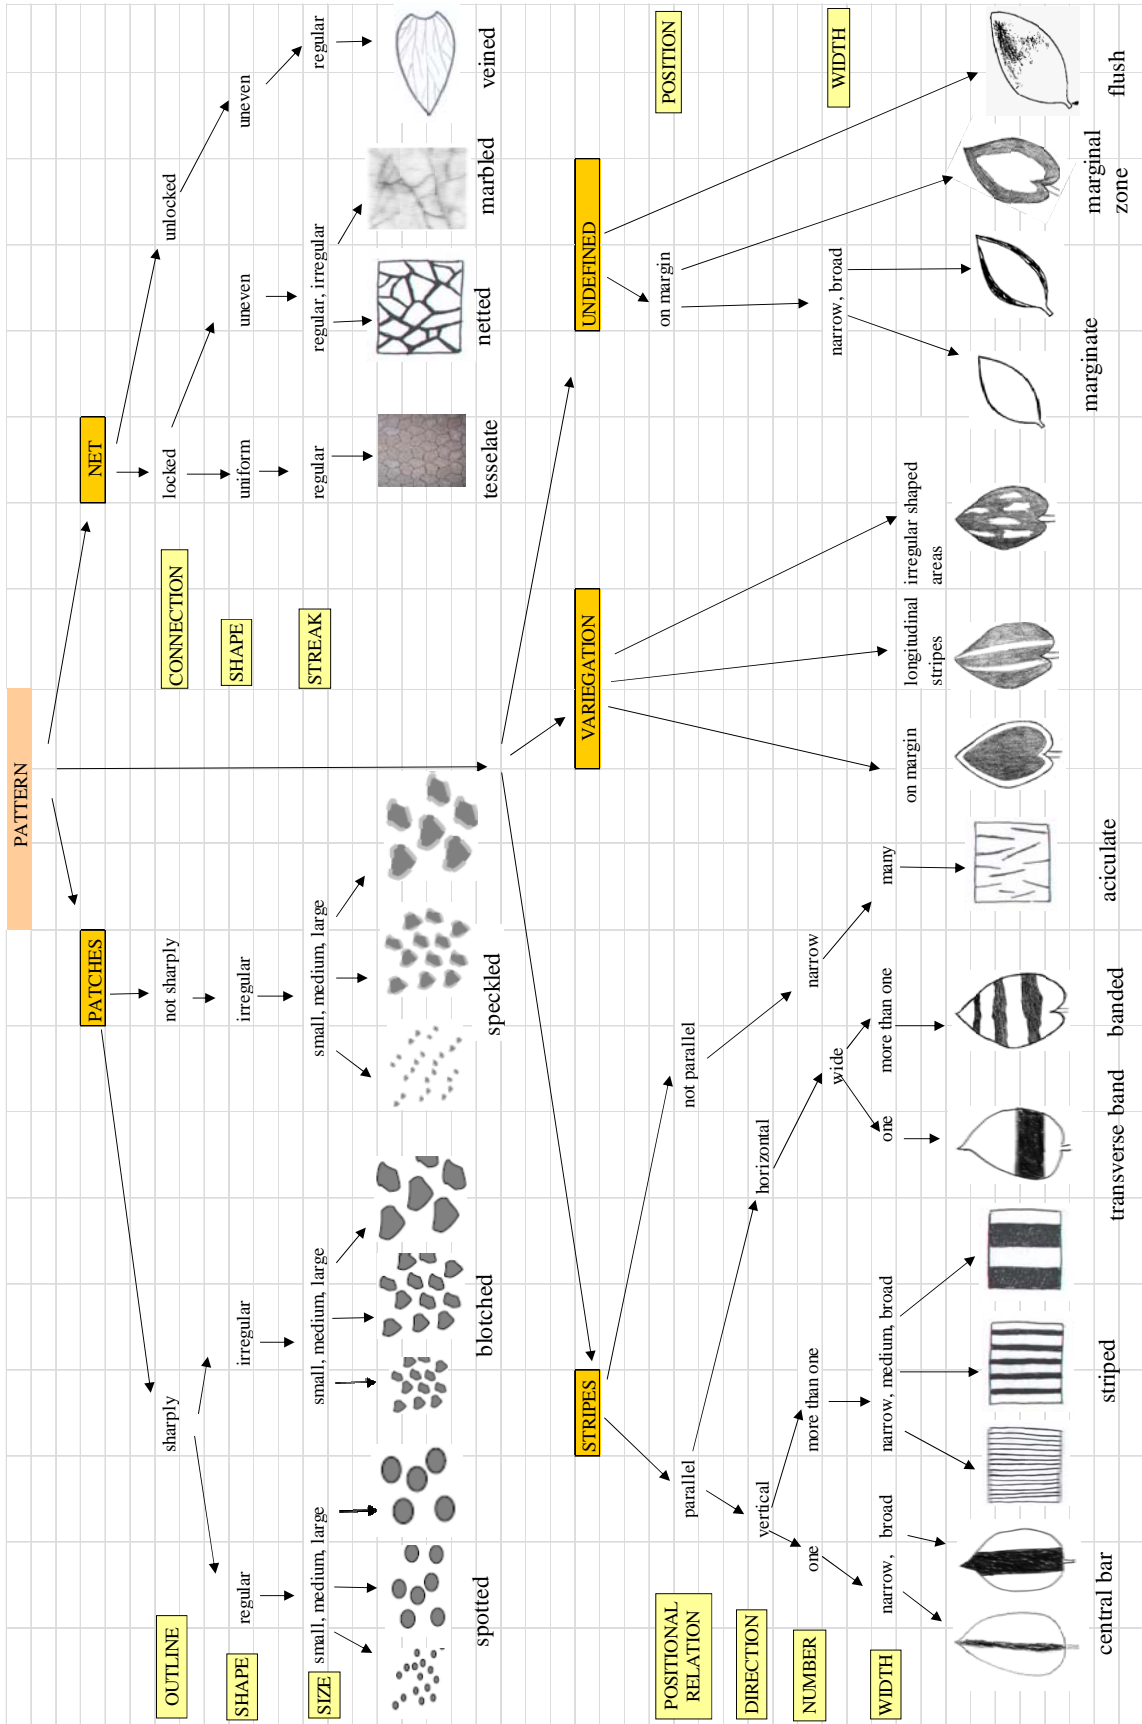

greenish white (1), yellow (2), green (3), purple (4)

Fruit: color (at maturity)

yellow (1), orange (2), red (3), brown (4), green (5)

PART IV: COLOR DISTRIBUTION AND COLOR PATTERNS

4.1 Schematic overview

4.2 Illustrations

4.2.1 Color Patterns

4.2.1.1 *Flush*

flush

4.2.1.2 *Spotted/ Blotched / Speckled*

- Spot: sharply, clear outlined round or nearly round shaped colored area.
- Blotch: sharply, clear outlined irregular shaped colored area.
- Speckle: diffuse outlined irregular shaped colored area.

According to the outline of the pattern it can be named as seen in the following table:

Outline/ size	clear regular	clear irregular	diffuse irregular
small	 small spots	 small blotches	 small speckles
medium	 medium spots	 medium blotches	 medium speckles
large	 large spots	 large blotches	 large speckles

4.2.1.3 *Central Bar*

narrow central bar broad central bar

4.2.1.4 *Aciculate / Striped*

aciculate narrow stripes medium stripes broad stripes

4.2.1.5 *Transverse Band / Banded*

transverse band banded

4.2.1.6 *Marginate / Marginal Zone*

narrow marginate broad marginate on marginal zone

4.2.1.7 *Tessellate / Netted / Marbled / Veined*

tessellate

netted

marbled

veined

4.2.1.8 *Variation*

at margin

along midrib

irregular

4.2.2 Color distribution

Note: distribution could be described by a combination of terms from the different sets using the words “and” or “excluding”; e. g. (a) distal quarter, excluding marginal zone, (b) distal half, excluding tip.

at base

basal quarter

basal half

basal three quarters

at tip

distal quarter

distal half

distal three quarters

central

transverse

at margin

throughout

4.3 The use of photographs to illustrate color distribution and color patterns

For all mentioned approaches it could be useful to recommend that a photograph be taken to illustrate certain color characteristics. It is recommended that a disclaimer be included in the Test Guideline to clarify the purpose for which the photograph is to be used; i.e. to illustrate the types of color distribution and/or color patterns, rather than the actual colors of the plant part concerned.

“A photograph of the [relevant plant part] could be provided in conjunction with the description in order to clarify the color distribution and/or color pattern. However, a warning should be added to this photograph, explaining that the primary intent of the photograph is to show the distribution and/or pattern of colors on the plant part rather than the actual colors. Color on photographs can be affected by the technology of the camera and the facilities used to display the photograph (printer, overhead projector, etc.).”

PART V: INDEX OF ALL TERMS

(NOTE: Will be updated once subgroup has discussed the draft)

ANNEX

COLOR NAMES FOR THE RHS COLOUR CHART

1. Introduction

1.1 When using the RHS Colour Chart, the variety description should contain both the RHS Colour Chart reference number and a name for the color. The purpose of this document is to harmonize color names for variety descriptions.

1.2 The RHS Colour Chart contains up to 896 colors, which are divided into 23 “groups” to name the colors. However, for UPOV purposes, this initial grouping seemed unable to name the colors in variety descriptions in a sufficiently precise way. Therefore, UPOV has identified 50 color “groups” which are presented in this document. It is important to note that these color “groups” were not created for the purpose of grouping varieties for DUS trials and should not be used for that purpose. Information on the grouping of varieties for DUS trials can be found in document TGP /9/1 "Examining Distinctness" [*cross ref.*].

1.3 The names used for the 50 UPOV Color Groups consist of either the [pure color] / [color hue] (e.g. yellow, orange, red), a combination of two [pure colors] / [color hues] (e.g. yellow orange, orange pink, purple red), or a combination of the [pure color(s)] / [color hue(s)] with “light” or “dark” (e.g. light yellow, dark pink red).

1.4 The color names in this document can be used with different editions of the RHS Colour Chart. The 1986 version of the RHS Colour Chart was used for the initial grouping and naming. In the 1995 edition no new charts were added. The additional charts in the 2001 edition (marked with "N") and in the 2007 edition (marked with "NN") have been integrated into the existing groups.

2. Example for the use of the UPOV Color Names in a variety description

2.1 If in Test Guidelines a characteristic is described by using the RHS Colour Chart, it is not obvious which color the plant part has, because it is only asked to indicate the RHS Colour Chart reference number, e.g.

Flower: main color of upper side RHS Colour Chart (indicate reference number)

2.2 For the variety description, it is useful to translate the RHS Colour Chart number into a color name and to fill this name into the column “state of expression”. The color name can be found in the appendix to this document, in which the RHS Colors are listed according to the UPOV Color Group to which they belong: e.g. RHS 46C belongs to group 21 “red”, RHS N 74B belongs to group 27 “purple” and RHS N 57A belongs to group 23 “purple red”.

Example:

2.3 Part of a variety description for New Guinea Impatiens (TG/196/1)

No.	Characteristic	State of expression		Note
20	Flower: main colour of upper side	red	RHS 46C	
21	<u>Varieties with bi- or multicoloured flowers only:</u> Flower: secondary colour of upper side	purple	RHS N 74B	
22	<u>Varieties with bi- or multicoloured flowers only:</u> Flower: distribution of secondary colour	mainly on upper petal		1
23	Flower: eye zone	present		9
24	Flower: size of eye zone	large		7
25	Flower: main colour of eye zone	purple red	RHS N 57A	

3. UPOV Color Groups

3.1 The 50 UPOV Color Groups are as follows:

UPOV Group No.	English	français	deutsch	español
1	white	blanc	weiss	blanco
2	light green	vert clair	hellgrün	verde claro
3	medium green	vertmoyen	mittel grün	verde medio
4	dark green	vert foncé	dunkelgrün	verde oscuro
5	yellow green	vert-jaune	gelbgrün	verde amarillento
6	grey green	vert-gris	graugrün	verde grisáceo
7	light blue green	vert-bleu clair	hellblaugrün	verde azulado claro
8	blue green	vert-bleu	blaugrün	verde azulado
9	brown green	vert-brun	braungrün	verde amarronado
10	light yellow	jaune clair	hellgelb	amarillo claro
11	yellow	jaune	gelb	amarillo
12	light yellow orange	orangé-jaune clair	hellgelborange	naranja amarillento claro
13	yellow orange	orangé-jaune	gelborange	naranja amarillento
14	orange	orange	orange	naranja
15	orange pink	rose-orangé	orangerosa	rosa anaranjado
16	light red pink	rose-rouge clair	hellrotrosa	rosa rojizo claro
17	red pink	rose-rouge	rotrosa	rosa rojizo
18	light blue pink	rose-bleu clair	hellblaurosa	rosa azulado claro
19	blue pink	rose-bleu	blaurosa	rosa azulado
20	orange red	rouge-orangé	orangerot	rojo anaranjado
21	red	rouge	rot	rojo
22	dark pink red	rouge-rose foncé	dunkelrosarot	rojo rosado oscuro
23	purple red	rouge-pourpre	purpurrot	rojo purpúreo
24	dark purple red	pourpre foncé	dunkelpurpurrot	rojo purpúreo oscuro
25	brown red	rouge-brun	braunrot	rojo amarronado
26	brown purple	pourpre-brun	braunpurpur	púrpura amarronado
27	purple	pourpre	purpurn	púrpura
28	violet	violet	violett	violeta
29	dark violet	violet foncé	dunkelviolett	violeta oscuro
30	light blue violet	violet-bleu clair	hellblauviolett	violeta azulado claro
31	blue violet	violet-bleu	blauviolett	violeta azulado
32	light violet blue	bleu-violet clair	hellviolettblau	azul violáceo claro
33	violet blue	bleu-violet	violettblau	azul violáceo
34	light blue	bleu clair	hellblau	azul claro
35	medium blue	bleu moyen	mittelblau	azul medio
36	dark blue	bleu foncé	dunkelblau	azul oscuro
37	light green blue	bleu-vert clair	hellgrünblau	azul verdoso claro
38	green blue	bleu-vert	grünblau	azul verdoso
39	grey blue	bleu-gris	graublau	azul grisáceo
40	light brown	brun clair	hellbraun	marrón claro
41	medium brown	brun moyen	mittelbraun	marrón medio
42	dark brown	brun foncé	dunkelbraun	marrón oscuro
43	light yellow brown	brun-jaune clair	hellgelbbraun	marrón amarillento claro
44	yellow brown	brun-jaune	gelbbraun	marrón amarillento
45	orange brown	brun-orange	orangebraun	marrón anaranjado
46	grey brown	brun-gris	graubraun	marrón grisáceo
47	green brown	brun-vert	grünbraun	marrón verdoso
48	grey	gris	grau	gris
49	green grey	gris-vert	grüingrau	gris verdoso
50	black	noir	schwarz	negro

3.2 The appendices to this document allocate the colors in the RHS Colour Chart to the appropriate UPOV Color Groups as follows:

Appendix I: Allocation of UPOV Color Groups for each RHS Color in
RHS Reference order

Appendix II: RHS Colors contained in each UPOV Color Group

[Appendices to Annex follow]

APPENDIX I TO ANNEX

Allocation of UPOV Color Groups for each RHS Color in RHS Reference order
