INTERNATIONAL UNION FOR THE PROTECTION OF NEW VARIETIES OF PLANTS
GENEVA

**TECHNICAL WORKING PARTY
FOR
ORNAMENTAL PLANTS AND FOREST TREES**

**Thirty-Third Session
Budapest, June 26 to 30, 2000**

**WORKING PAPER ON TEST GUIDELINES FOR THYME
(*Thymus vulgaris L.*)**

Document prepared by experts from France

I. Subject of these Guidelines

These Test Guidelines apply to all vegetatively propagated varieties of *Thymus vulgaris* L. of the family Labiateae (Lamiaceae).

II. Material Required

1. The competent authorities decide when, where and in what quantity and quality the plant material required for testing the variety is to be delivered. Applicants submitting material from a State other than that in which the testing takes place must make sure that all customs formalities are complied with. As a minimum, the following quantity of material is recommended:

20 rooted cuttings.

2. The plant material supplied should be visibly healthy, not lacking in vigor or affected by any important pests or diseases.

3. The plant material must not have undergone any treatment unless the competent authorities allow or request such treatment. If it has been treated, full details of the treatment must be given.

III. Conduct of Tests

1. A test should normally be conducted for one growing period (if necessary, after the year of establishment in open field). If distinctness and/or uniformity cannot be sufficiently established in one growing period, the test should be extended for a second growing period.

2. The test should normally be conducted at one place. If any important characteristics of the variety cannot be seen at that place, the variety may be tested at an additional place.

3. The test should be carried out in the glasshouse, in pots with well aired substrate with good water drainage under the following growing conditions.

3. The size of the tests should be such that plants or parts of plants may be removed for measurement and counting without prejudice to the observations which must be made up to the end of the growing period. Each test should include a total of 20 plants. Separate plots for observation and for measuring can only be used if they have been subject to similar environmental conditions.

4. Additional tests for special purposes may be established.

IV. Methods and Observations

1. All observations determined by measurement or counting should be made on 10 plants or parts taken from each of 10 plants.

2. For the assessment of uniformity a population standard of 1% with an acceptance probability of at least 95% should be applied. In the case of a sample size of 20 plants, the maximum number of off-types allowed would be 1.

3. Unless otherwise indicated, all observations should be made on typical organs of 10 plants just before the time of full flowering.

4. Because daylight varies, color determinations made against a color chart should be made either in a suitable cabinet providing artificial daylight or in the middle of the day in a room without direct sunlight. The spectral distribution of the illuminant for artificial daylight should conform with the CIE Standard of Preferred Daylight DE 6500 and should fall within the tolerance set out in British Standard 950, Part I. These determinations should be made with the plant part placed against a white background.

V. Grouping of Varieties

1. The collection of varieties to be grown should be divided into groups to facilitate the assessment of distinctness. Characteristics which are suitable for grouping purposes are those which are known from experience not to vary, or to vary only slightly, within a variety. Their various states of expression should be fairly evenly distributed throughout the collection.

2. It is recommended that the competent authorities use the following characteristics for grouping varieties:

- (a) Leaf: variegation (characteristic 16)
- (b) Leaf: main colour (characteristic 17)
- (c) Flower: colour of petal (characteristic 19)
- (d) Plant: male sterility (characteristic 26)

VI. Characteristics and Symbols

1. To assess distinctness, uniformity and stability, the characteristics and their states as given in the Table of Characteristics should be used.

2. Notes (numbers), for the purposes of electronic data processing, are given opposite the states of expression for each characteristic.

3. Legend:

- (*) Characteristics that should be used on all varieties in every growing period over which examinations are made and always be included in the variety descriptions, except when the state of expression of a preceding characteristic or regional environmental conditions render this impossible.
- (+) See Explanations on the Table of Characteristics in Chapter VIII.

VII. Table of characteristics/Tableau des caractères/Merkmalstabelle/Tabla de caracteres

English	Français	deutsch	español	Example Varieties	Note/ Nota
				Exemples Beispielssorten Variedades ejemplo	
1. Plant : height (*)	Plante: hauteur				
short	basse			Savoie	3
medium	moyenne			Passet, Heili	5
tall	haute			Valdeyron	7
very tall	très haute			Gambaru, Ygor	9
2. Plant: growth habit (*)	Plante : port à la floraison				
erect	dressé			Gambaru, Valdeyron	1
semi erect	demi dressé			Allemand	3
prostrate	horizontal			Heili, Savoie	5
3. Plant: size (*)	Plante : taille				
small	faible			5.77	3
medium	moyen			Escalin, Ygor, Pegase	5
large	fort			Gambaru	7
4. Plant: density of foliage (*)	Plante: densité du feuillage :				
Sparse	faible			1.52	3
Medium	moyenne			Passet, Allemand	5
Dense	forte			Ygor, Pegase	7
5. Plant: distribution of leaves along stem (*)	Plante : répartition des feuilles le long de la tige				
only at base	seulement à la base			Escalin, Passet	1
only at middle	seulement au milieu			2.40	2

IX. Literature

X. Technical Questionnaire

	Reference Number (not to be filled in by the applicant)
TECHNICAL QUESTIONNAIRE to be completed in connection with an application for plant breeders' rights	
1. Species	<i>Thymus vulgaris L.</i> THYME
2. Applicant (Name and address)	
3. Proposed denomination or breeder's reference	

4. Information on origin, maintenance and reproduction of the variety

4.1 Origin

(a) Seedling (indicate parent varieties)

..... []

(b) Mutation (indicate parent variety)

..... []

(c) Discovery (indicate where and when)

..... []

(d) Other (specify)

..... []

4.2 Method of reproduction

- cuttings []

- *in vitro* propagation []

- other (state method) []

4.3 Other information

5. Characteristics of the variety to be indicated (the number in brackets refers to the corresponding characteristic in Test Guidelines; please mark the state of expression which best corresponds).

Characteristics	Example Varieties	Note
5.1 Plant: growth habit at flowering (2)		
erect	Gambaru, Valdeyron, Passet, Ygor, Pegase	1[]
semi erect	Allemand	3[]
prostrate	Heili, Savoie, 2.40	5[]
5.2 Plant: distribution of leaves along stem (5)		
only at base	Escalin, Passet	1[]
only at middle	2.40	2[]
only upper part	Ygor, Pegase	3[]
all along stem (from base to tip)	Gambaru, Valdeyron, Heili, Allemand	4[]
5.3 Stem: distribution of flowers on stem (8)		
concentrated at tip	1.44, 3.49	1[]
only terminal	Escalin, Allemand	2[]
along upper half	1.52, Heili	3[]
along upper the two superior thirds	Gambaru	4[]
along whole stem	Passet	5[]
5.4 Leaf: variegation (16)		
absent	Valdeyron	1[]
present	Silver Posie	9[]
5.5 Leaf: main color (17)		
yellow green		1[]
green	Escalin, Allemand	2[]
blue green	Passet, Ygor	3[]
grey green	Valdeyron, Pegase, Gambaru	4[]

Characteristics	Example Varieties	Note
5.6 Leaf : intensity of main color (18)		
light		3[]
medium		5[]
dark		7[]
5.7 Flower: color of petal (20)		
white or slightly pink	Passet	1[]
medium pink	Escalin, Ygor	2[]
purple	4.77	3[]
violet	Valdeyron, Pegase, Luberon	4[]
5.8 Plant: male sterility (27)		
absent	Ygor, Heili	1[]
present	Valdeyron, Escalin, Gambaru, Passet, Allemand, Luberon	9[]

6. Similar varieties and differences between these varieties

Denomination of similar variety	Characteristic in which the similar variety is different ^{o)}	State of expression of similar variety	State of expression of candidate variety

^{o)} In the case of identical states of expressions of both varieties, please indicate the size of the difference.

7. Additional information which may help to distinguish the variety

7.1 Resistance to pests and diseases

7.2 Special conditions for the examination of the variety

(i) Main use

- ornamental []
- culinary []
- essential oil []
- other (specify) []

7.3 Other information

A representative color photo of the variety should be included in the Technical Questionnaire.

8. Authorization for release

(a) Does the variety require prior authorization for release under legislation concerning the protection of the environment, human and animal health?

Yes [] No []

(b) Has such authorization been obtained?

Yes [] No []

If the answer to that question is yes, please attach a copy of such an authorization.
