ORIGINAL: English
DATE: September 16, 2014

INTERNATIONAL UNION FOR THE PROTECTION OF NEW VARIETIES OF PLANTS
Geneva

TECHNICAL WORKING PARTY FOR VEGETABLES

Forty-Eighth Session
Paestum, Italy, from June 23 to 27, 2014

ADDENDUM TO DOCUMENT TWV/48/20

REVISION OF DOCUMENT TGP/8: PART II: SELECTED TECHNIQUES USED IN DUS EXAMINATION,
NEW SECTION12: EXAMINING CHARACTERISTICS USING IMAGE ANALYSIS

Document prepared by the Czech Republic, France, the Netherlands and the United Kingdom

Disclaimer: this document does not represent UPOV policies or guidance

The annexes to this document contain copies of presentations made by experts from the Czech Republic, France, the Netherlands and the United Kingdom, at the forty-eighth session of the Technical Working Party for Vegetables (TWV), in relation to their use of image analysis in DUS examination, as follows:

- ANNEX I: Image analysis in UKZUZ, Czech Republic
- ANNEX II: Phenotyping by image analysis, France
- ANNEX III: Image analysis of onion varieties, the Netherlands
- ANNEX IV: Vegetable DUS image analysis in the United Kingdom, United Kingdom

[Annexes follow]

Image analysis in UKZUZ

UPOV
TWV, Forty-Eighth Session, Paestum, Italy

June, 2014

Radmila Šafařková

Topics

- ✓ Main goals
- ✓ Hardware, software
- ✓ Practical experience
- ✓ Summary

Main goals

- ✓ **To replace visual observation or manual measurement by image analysis for appropriate crops and characteristics**
 - ✓ To save labour work
 - ✓ To eliminate human factor errors
 - ✓ To reach greater precision

- ✓ **To store and archive images of plant material**

- ✓ **To assess precisely characteristics which are difficult to observe visually or to measure**

3

UPOV rule

Characteristics which may be examined by IA should be able to be examined by visual observation or manual measurement, as appropriate

4

Difficult-to-measure characteristics

- Stipule: length (15) A - B
- Stipule: width (16) C - D
- Stipule: length from axil to tip (18) E - F
- Stipule: length of lobe below axil (19) G - H
(perpendicular to the line E - G)

5

Difficult-to-measure characteristics

- Cotyledon characteristics:
- ratio length/width
 - saddle depth
 - ratio lobe separation/width
 - ratio lobe separation/ saddle depth

6

Specifics in UKZUZ

- ✓ Image analysis is used in a fully automated way – the expert just scans of plant material and a computer calculates relevant characteristics without human interference
- ✓ Images of plant parts are recorded with scanner at three UKZUZ locations
- ✓ Scanned images are sent to the centre
- ✓ Image analysis is provided by biometrician

7

Software

MATLAB – computational system

- ✓ <http://www.mathworks.com/>
- ✓ Core + analysis toolbox
- ✓ Prepared functions completed by our expert for particular characteristics

8

Hardware

SCEYE

- ✓ [Http://www.sceye.biz/](http://www.sceye.biz/)
- ✓ Relatively cheap solution
- ✓ Quality of the device: shape analysis fully possible, colour analysis impossible

9

Problems in development

Main condition – to ensure harmonization and calibration

Light condition

- ✓ Shade of coin
- ✓ Reflections
- ✓ Image burn

Identification of objects

- ✓ Plant material
- ✓ Coin
- ✓ Label

10

Problems in development

11

Problems in development

12

Problems in development

13

Problems in development

14

Solution

- ✓ Acquisition of the illuminative system Atlas
- ✓ Improvement of the blackout of the working room
- ✓ Better organization of the scanned area

Consistency between results from manual measurements or visual observations and IA result should be checked!

15

Preparation of the sample

16

Blackout

17

Better organisation

18

Application of IA

- ✓ Current
 - ✓ Pea
 - ✓ Leaflets, stipules and standard characteristics
 - ✓ Oil seed rape
 - ✓ Cotyledons and flower characteristics
- ✓ Preparation
 - ✓ Pea
 - ✓ Pods characteristics
 - ✓ Bean
 - ✓ Leaf and pods characteristics

19

Conclusion

IA YES or NO?

- ✓ Number of variety in RC
- ✓ Number of individual measurements
- ✓ Size of observed organs
- ✓ Type of characteristics (difficult to measurement or observe)

- ✓ Investment
 - ✓ hardware, software, experts, precise definition of char., time consuming preparation of samples, calibration with already existing results...)

20

Thank you for your attention

[Annex III follows]

The logo for 'nak tuinbouw' features the word 'nak' in a lowercase, black, sans-serif font, followed by a stylized graphic element consisting of a red curved line with a black dot at its base and a yellow leaf-like shape at its tip. This is followed by the word 'tuinbouw' in a lowercase, black, serif font. The background is a collage of three vertical panels: a light yellow panel on the left, a light brown panel in the middle, and a light orange panel on the right.

nak  *tuinbouw*

Image analysis of onion varieties

Marian van Leeuwen

UPOV TWV 2014

The logo for 'nak tuinbouw' is repeated in a smaller size at the bottom left of the page. It consists of the word 'nak' in a lowercase, black, sans-serif font, followed by a stylized graphic element consisting of a red curved line with a black dot at its base and a yellow leaf-like shape at its tip. This is followed by the word 'tuinbouw' in a lowercase, black, serif font.

nak  *tuinbouw*

Method: Image analysis

An image analysis system is developed for a number of characteristics which at the moment are observed only visually, but then also can be analysed statistically:

- 13: Bulb: height
- 14: Bulb: diameter
- 15: Bulb: ratio height/diameter
- 16: Bulb: position of maximum diameter
- 17: Bulb: width of neck
- 18: Bulb: shape (in longitudinal section)
- 19: Bulb: shape of stem end
- 20: Bulb: shape of root end

Vegetable DUS Image Analysis in the UK

Tom Christie

SASA © Crown Copyright

1975 - Who is this fellow and what is he holding?

SASA © Crown Copyright

Then in 1991 the first commercial digital camera becomes available

for only
\$13,000!

SASA © Crown Copyright

And in 1998 (while we waited for the price to come down) work begins at BioSS

Automatic measurement of pea pod, leaflet and stipule characteristics

Graham W. Horgan¹, Alec D. Mann & Adrian M. I. Roberts.

Biomathematics & Statistics Scotland

December 2000

Summary

This aim of this project was to develop methods for automated measurement of the characteristics of pea pods, leaflets and stipules.

SASA © Crown Copyright

The advantages of image analysis were projected to be:

- *Greater accuracy*
- *Greater consistency*
 - *Leading to greater discrimination*
- *Data would be captured which is only available digitally*
- *Decreased cost per character*
- *Generation of an image archive - DIGITISATION*
- *Generation of a data archive - DATAFICATION*

So in 1999 - SASA buys a camera

- 3.2 Megapixels!

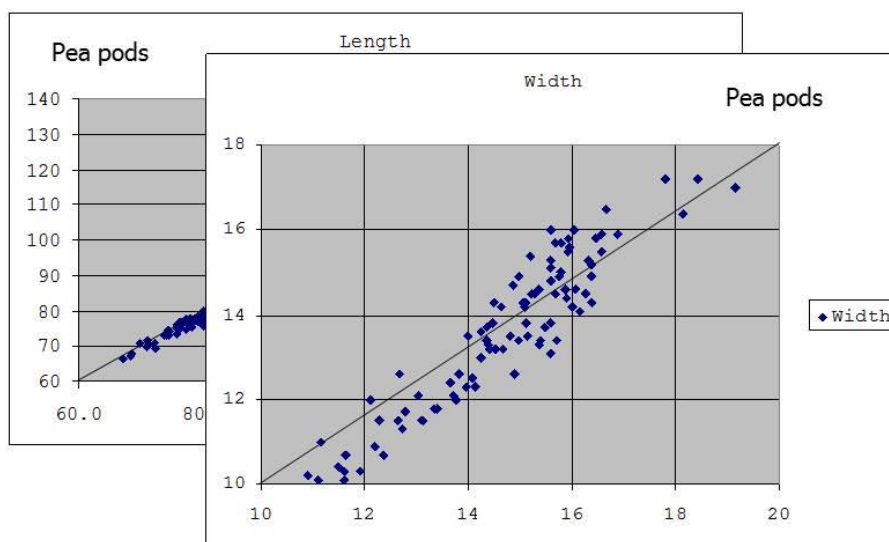

(My phone now has 13)

And in 2000 the first images were captured.

SASA © Crown Copyright

Followed by a period of testing and calibration

SASA © Crown Copyright

... and of course, the Cost-Benefit Analysis

MANUAL RECORDING	time (mins.)	AUTOMATED RECORDING	time (mins.)
Set up Data Capture machine	35	Produce labels for photography	35
Recording time	1314	Photography including preparation and lay out time	2002
Download and check data; transfer to spreadsheet	180	Download and check data	120
Total time	1529	Total time	2157
Characters measured	12	Characters measured	55
Time per character	127	Time per character	39
Total Cost @ 2003/4 rates	£911	Total Cost @ 2003/4 rates	£1612
Cost per character	£76	Cost per character (£)	£29

SASA © Crown Copyright

In 2005 DUS uses imaging for the first time for peas

SASA © Crown Copyright

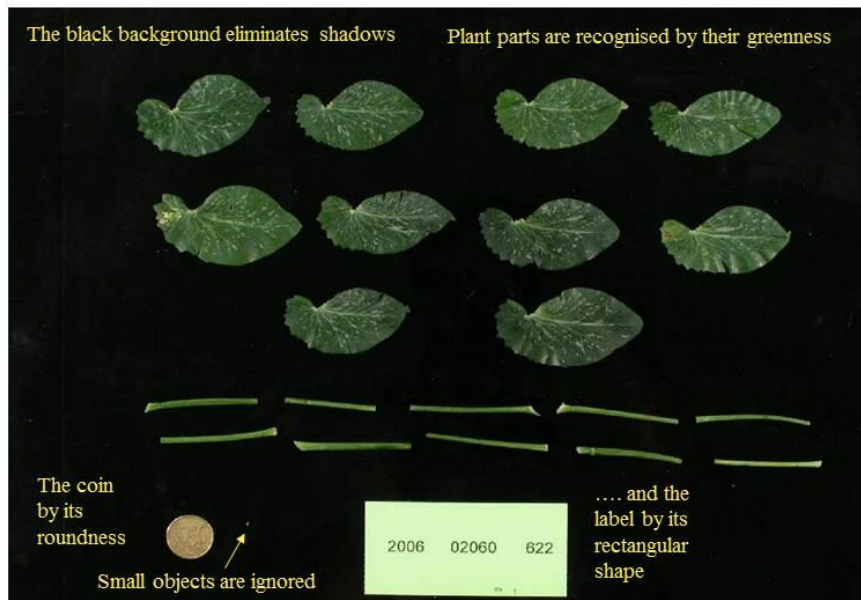

Pea imaging – the current setup

SASA © Crown Copyright

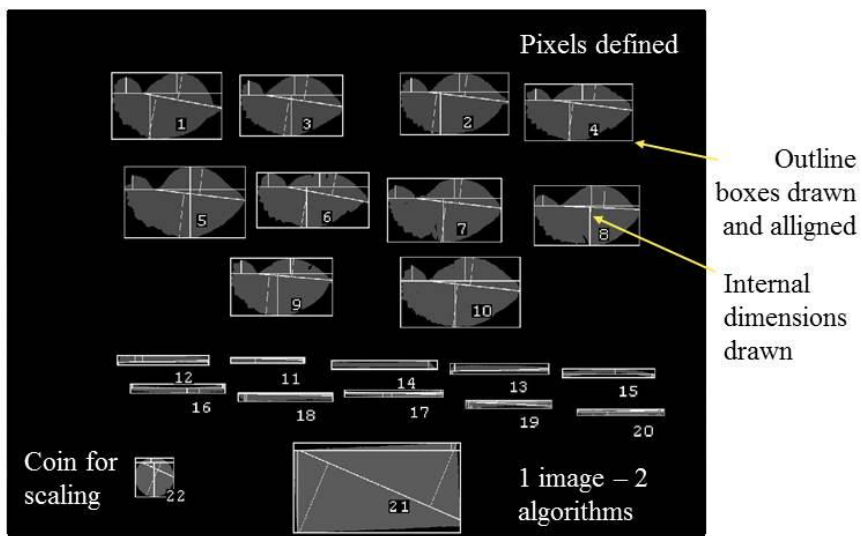

SASA © Crown Copyright

There are some basic principles:

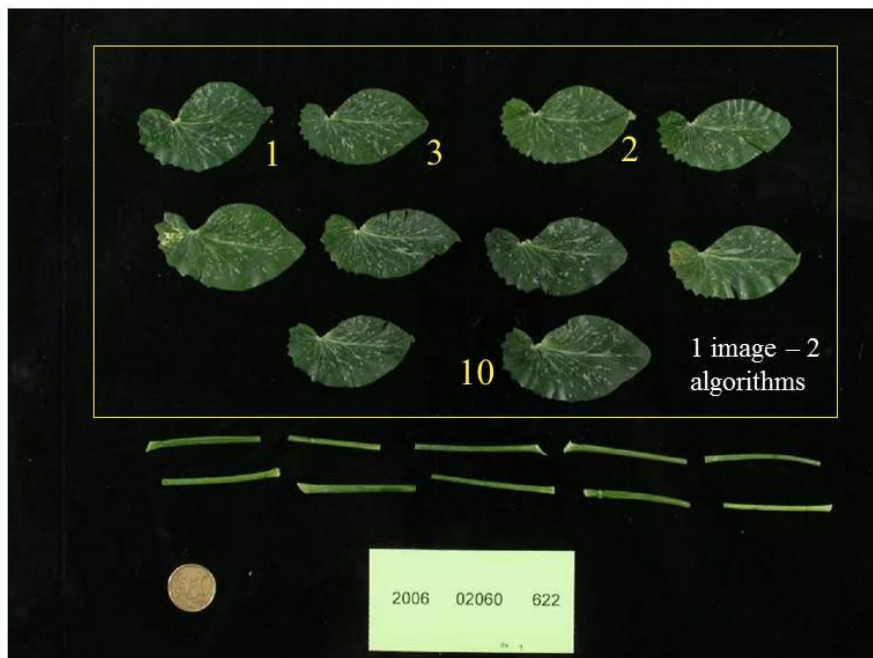

SASA © Crown Copyright

Images are analysed using Imagin software

SASA © Crown Copyright

SASA © Crown Copyright

Analysis output – pea stipules

leaflet or tendril

SASA © Crown Copyright

At SASA we also use image analysis for DUS Parsnips

SASA © Crown Copyright

Parsnip characters recorded automatically

DUS characteristics (CPVO)

- 14. Root: length
- 15. Root: width
- 16. Root: distance from widest point to crown,
- 18. Root: depth of crown depression
- 19. Root: width of crown depression
- 22. Root: core width

SASA © Crown Copyright

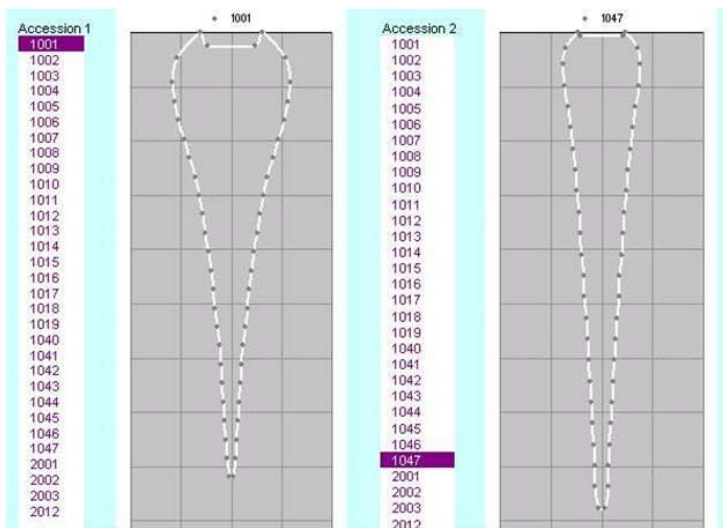

Which yields the now familiar data format
