INTERNATIONAL UNION FOR THE PROTECTION OF NEW VARIETIES OF PLANTS

Geneva

TECHNICAL WORKING PARTY FOR VEGETABLES

**Forty-Eighth Session
Paestum, Italy, from June 23 to 27, 2014**

ADDENDUM TO DOCUMENT TWV/48/2

MOLECULAR TECHNIQUES

Document prepared by the Netherlands

Disclaimer: this document does not represent UPOV policies or guidance

The annex to this document contains a copy of the presentation made by an expert from the Netherlands, at the forty-eighth session of the Technical Working Party for Vegetables (TWV), on "DNA in DUS examination for Registration and PBR/PVP".

[Annex follows]

DNA in DUS examination for Registration and PBR/PVP

Molecular markers in DUS

Use of DNA marker technology at Naktuinbouw

- According to the UPOV-BMT models
- As a supportive tool in addition to the traditional DUS examination

Molecular Markers in DUS

nak tuinbouw

- **UPOV-BMT**

The Working Group on Biochemical and Molecular Techniques and DNA-profiling in particular (BMT)

MODEL 1:	Characteristic-specific molecular markers
MODEL 2:	Combining phenotypic and molecular distances; management of variety collections
MODEL 3:	Calibrated molecular distances in the management of variety collections
MODEL 4:	Use of molecular marker characteristics

BMT MODEL: 1

nak tuinbouw

Model 1: Molecular Characteristics as Predictors of 'Traditional' Characteristics

- a) Gene-specific markers for predicting individual phenotypic characteristics. (Reliable linkage between the marker and the expression of the characteristic required)
- e.g. *disease resistance*
- b) Use of a set of molecular characteristics which can be used to reliably estimate traditional characteristics; e.g. *quantitative trait loci (QTL)*

BMT MODEL: 1 - strategy

nak  tuinbouw

Model 1: Molecular Characteristics as Predictors of 'Traditional' Characteristics

Perform the validated Molecular Test

- PCR test performed on min. 20 individual plants. When resistance gene present and TQ resistant; enough proof – no bioassay needed.
- When resistance gene absent (susceptible allele present); bioassay will be performed.
- When PCR result and TQ do not match; bioassay.
- When there is any (other) doubt; bioassay.

MODEL 1a: overview of tests

nak  tuinbouw

Disease resistance in tomato:

- ***Meloidogyne incognita***
 - MI1.2 (traditional PCR)
- ***Tomato Mosaic Virus (ToMV)***
 - Tm1 (traditional PCR)
 - Tm2 and Tm2² (tetra ARMS)
- ***Verticillium dahliae***
 - Ve1 and Ve2 (same locus) (tetra ARMS)
- ***Fusarium oxysporum f. sp. lycopersici***
 - I-2 gene (traditional PCR)

These Appl Genet

ORIGINAL PAPER

Development and evaluation of robust molecular markers linked to disease resistance in tomato for distinctness, uniformity and stability testing

Paul Arens · Carmen Manilla · Daniel Deinum · Lucilla Cavillini · André Moretti · Sophie Rolland · Hanneke van der Schoot · David Calvario · Fernando Pozo · Cecile Collanier · René Mathis · Diederik Smit · Carole Caranta · Ben Vosman

MODEL 1a: predictor for resistance

nak tuinbouw

Example: Amplification Refractory Mutation System (ARMS) for the detection of Ve-1/Ve-2 and Tm2/Tm2²

MODEL 1a: correlation

nak tuinbouw

Verticillium dahliae Ve1 and Ve2 genes

Total # varieties	Correlation PCR vs Bioassay
94	98%
2	Ve1-ve2 new haplotype = intermediate resistance

Discovery of combination of new alleles (=haplotype) that might explain newly observed intermediate resistance levels for *Verticillium*.

Meloidogyne incognita MI1.2 gene

Total # varieties	Correlation PCR vs Bioassay
130	99%
1 resistant fragment	Susceptible in bioassay

This candidate variety also had intermediate resistance levels for Ve. This application was not registered. Not DUS.

MODEL 1a: correlation

Tomato Mosaic Virus (ToMV) Tm2 and Tm2²

Total # varieties	Correlation PCR vs TQ and Bioassay
100	100%

Fusarium oxysporum f. sp. lycopersici I-2 gene

Total # varieties	Correlation PCR vs TQ and Bioassay
100	100%

nak  tuinbouw

MODEL 1a: overview of tests

Disease resistance in tomato:

- **Tomato Spotted Wilt Virus (TSWV)**
 - Sw-5 (TaqMan PCR)
- **Tomato Yellow Leaf Curl Virus (TyLCV)**
 - Ty-1 / Ty-3 (Melt Curve analysis)

TSWV reference:

Dianese E.C., Fonseca M.E.N., Goldbach R., Kormelink R., Inoue-Nagata A.K., Resende R.O., Boiteux L.S.(2009) Development of a locus-specific, co-dominant SCAR marker for assisted-selection of the SW-5 (*Tospovirus* resistance) gene cluster in a wide range of tomato accessions. Mol Breeding (2010) 25:133-142.

TyLCV reference:

Verlaan M.G.: The Tomato Yellow Leaf Curl Virus Resistance Gene Ty-1 and TY-3 are allelic and Code for DFGD-Class RNA Dependent RNA Polymerases. PLOS Genetics March 2013 Volume 9 issue 3.

Patent: <http://www.google.com/patents/WO2012125025A1?cl=en>

nak  tuinbouw

MODEL 1a: predictor for resistance

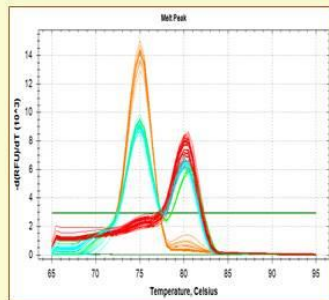

nak tuinbouw

Example: melt curve analysis for TyLCV

Susceptible allele =
deletion of 12 base pairs

PCR product for resistant allele
melts at 75°C (yellow peak)

PCR product for susceptible allele
melts at 80°C (red peak)

In a heterozygous variety both
peaks are visible (blue)

MODEL 1a: correlation

nak tuinbouw

TSWV Sw-5

Total # varieties	Correlation PCR vs TQ
89	100%

TyLCV Ty-1/Ty-3

Total # varieties	Correlation PCR vs TQ
15	100%

Bioassay is not (yet) possible.

MODEL 1a: overview of tests

nak  tuinbouw

Cytoplasmatic Male Sterility (CMS) in *Brassicaceae*

- Broccoli
- Cauliflower
- Red Cabbage
- White Cabbage
- Kohlrabi
- Savoy Cabbage
- Brussels Sprout
- Curly Kale

Ogura-type cytoplasmatic male-sterility from Japanese radish
(covered by confidentiality clause)

CMS marker is located in *orf138*

Fertile varieties do not have *orf138*

MODEL 1a: overview of tests

nak  tuinbouw

Cytoplasmatic Male Sterility (CMS) in *Brassicaceae*

Seeds are sown on wet filter paper. After one week seedlings are harvested.

For fertile varieties:

5 pools of 5 individuals are sampled and analysed by TaqMan PCR.

For sterile varieties:

min. 20 individual plants were sampled and analysed by TaqMan PCR.

From 165 applications (2011-2014) in all *Brassicaceae* tested only one PCR result not in accordance with TQ/Bioassay (99,4%).

Different source of sterility (not OGURA-type)

BMT MODEL: 2

nak tuinbouw

- **Model 2:** Combining phenotypic and molecular distances and in the management of variety collections
- Overall genetic assessment in relation to overall morphological assessment

BMT MODEL: 2

nak  tuinbouw

Combining phenotypic and molecular distances management of variety collections model system POTATO

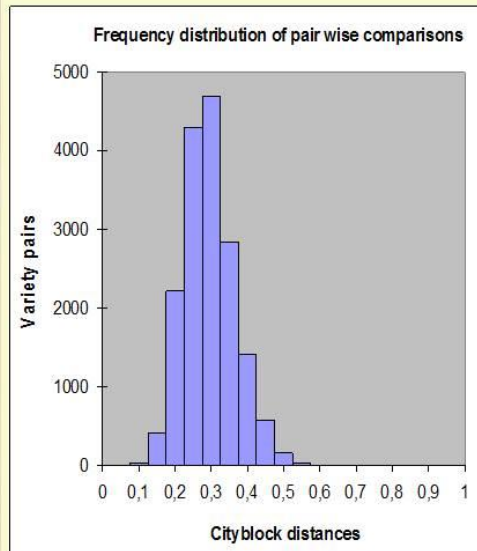

AIM:

- Better selection of relevant references in field trial
- Exclude non-relevant reference varieties from field trial
- Reduce the number of reference varieties in the field trial
- Reduce the duration of the DUS test
- Reduce costs

MODEL 2: Phenotypic distance

nak  tuinbouw

- 183 varieties
- 16.653 combinations
- Lightsprout and field characteristics
- Only quantitative characteristics
- Cityblock distance: sum of all differences

MODEL 2: Genotypic distance

nak  tuinbouw

- 900 varieties under which the 183
- 404100 combinations
- Tubers from several origins investigated by two labs (CPVO project)
- 9 SSR markers, randomly divided over the chromosomes
- Jaccard similarity:

Combination/Calibration of mol. distance

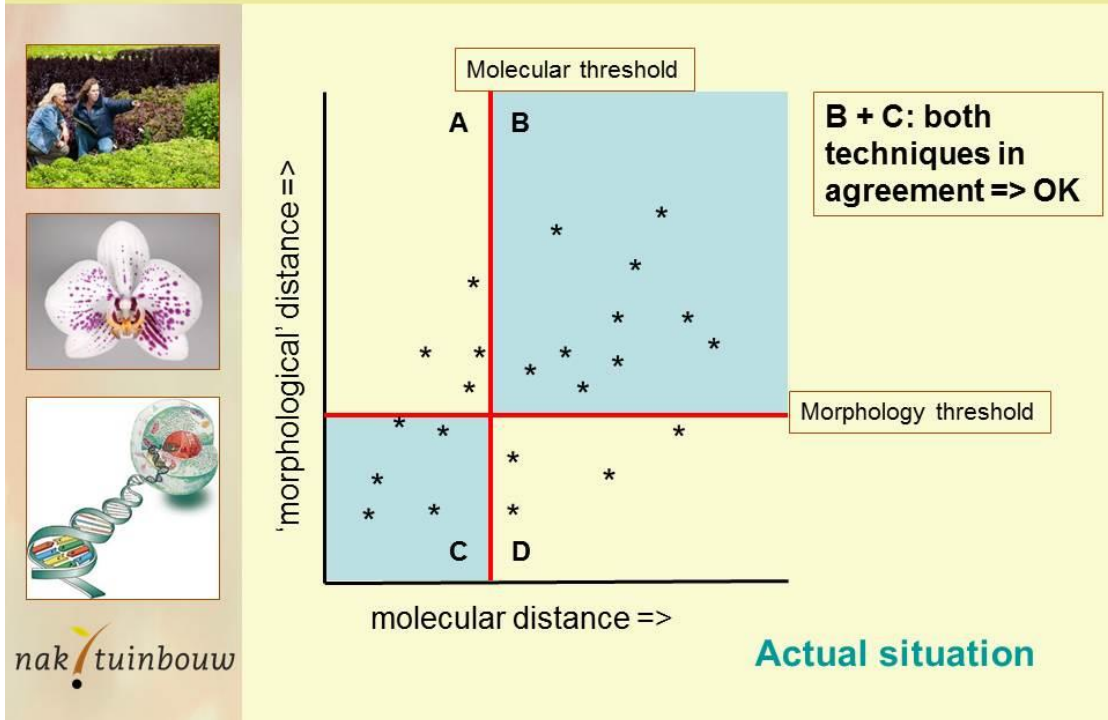

nak  tuinbouw

ideal situation

Combination/Calibration of mol. distance

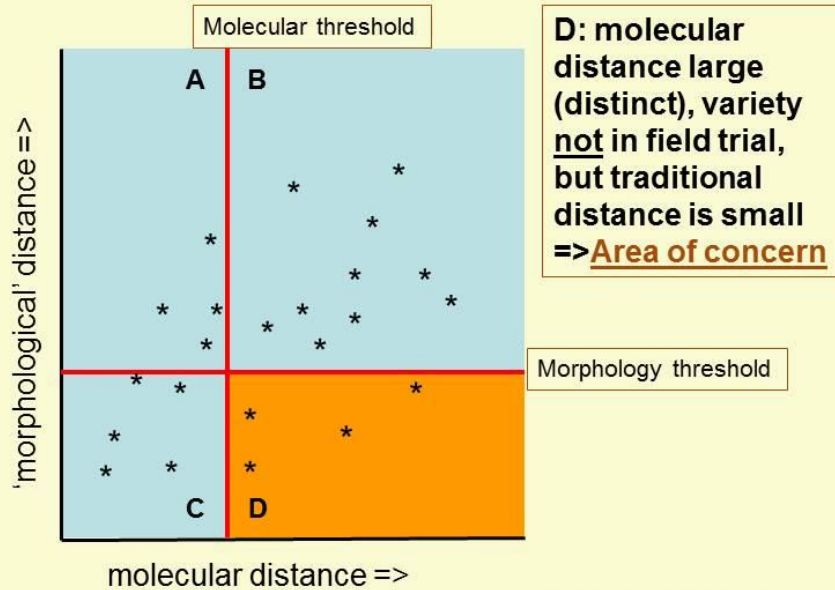

Combination/Calibration of mol. distance

Combination/Calibration of mol. distance

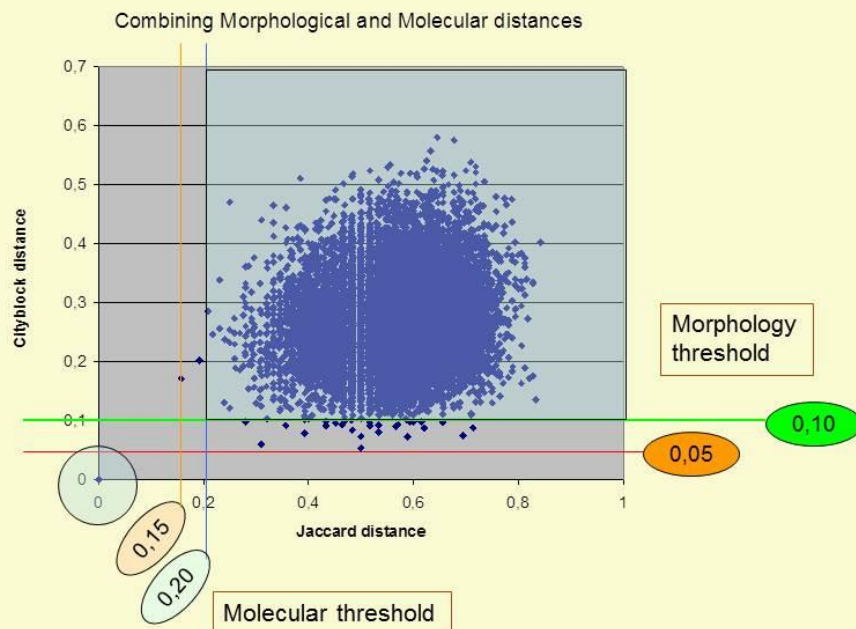

nak tuinbouw

MODEL 2: Combination Morph/Mol. distances

nak tuinbouw

Improved DUS system POTATO

nak  tuinbouw

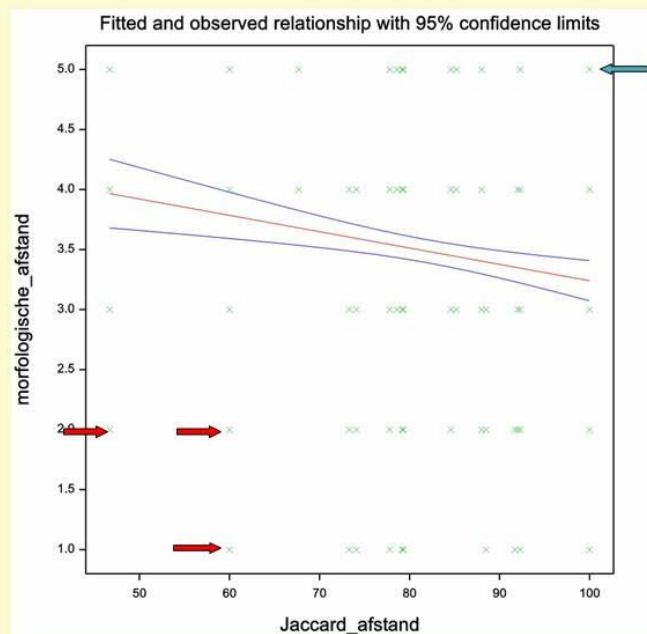

DUS test based on morphology and DNA:

- **First year:**
 - start of season: description lightsprout (compared with photo database) and DNA profiling
 - Growing season: morphological description
- **End first year:**
 - DUS decision based on morphological distance and genetic distance (distinct plus thresholds)
- **Second year test for candidate varieties only when:**
 - Candidate/reference pair below 'distinct plus' threshold for morphological distance (cityblock distance $< 0,1$)
 - Candidate/reference pair below 'distinct plus' threshold for genetic distance (Jaccard $< 0,2$).

Improved DUS system LETTUCE?

nak  tuinbouw

MODEL 2: Combination Morph/Mol. distances

nak  tuinbouw

Advantages :

- A huge collection of varieties in *common knowledge* in a DNA database, not a living collection.
- Increased reliability for a candidate variety to be (or not to be) distinct from all that is known.
- Exclude or include reference varieties based on their DNA profiles.
- In most cases the duration of DUS trial can be reduced (cost reduction).
- Spin-off: use DNA database for other purposes than DUS.

BMT MODEL: 3

nak  tuinbouw

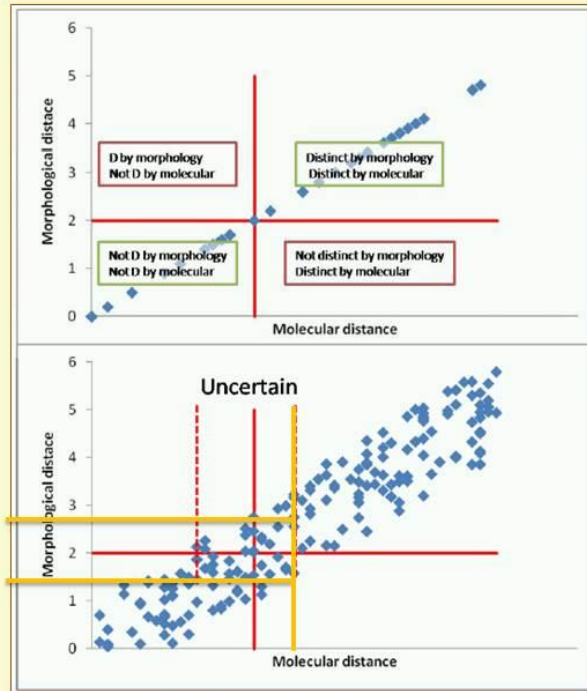

- **Model 3: Calibrated molecular distances in the management of variety collections.**

AIM:
Predict morphological distance based on calibrated molecular distance

MODEL 3: Calibration of molecular distance

nak tuinbouw

Currently under study

Molecular Characteristics as Predictors of 'Traditional' Characteristics

- Markers linked to disease resistance genes in tomato
- Markers for CMS in cabbage

Combination/Calibration of threshold levels for the management of reference collections

- Potato (in cooperation with SASA Scotland)
- Lettuce (in cooperation with France)
- Phalaenopsis (in cooperation with Taiwan)
- *Lolium perenne* (in cooperation with ILVO, Australia and North Ireland)

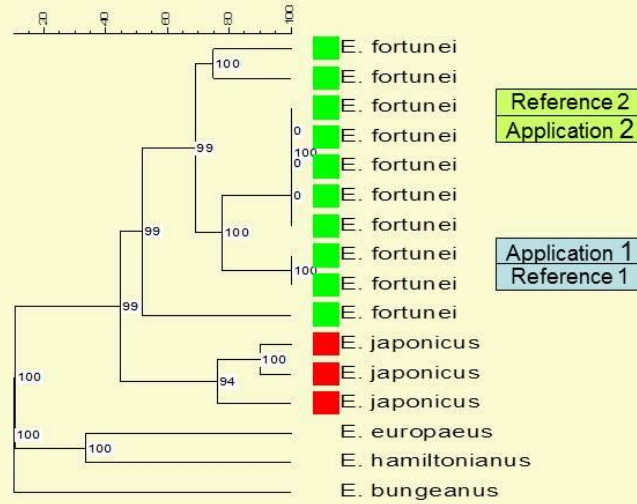

nak tuinbouw

DUS Support with DNA at Naktuinbouw

Example 1

Investigate two *Euonymus* candidate varieties with their reference varieties because of doubt on distinctness

Differences on morphology resulted from physiology differences, different treatments and age differences of propagating material

nak  tuinbouw

DUS Support with DNA at Naktuinbouw

Example 2

Investigate two applications to each other and the database

nak  tuinbouw
