INTERNATIONAL UNION FOR THE PROTECTION OF NEW VARIETIES OF PLANTS
 GENEVA

CAMELLIA	*
UPOV Code: CMLIA (excluding CMLIA_SIN)	
<i>Camellia L.</i>	
excluding <i>Camellia sinensis</i> L. O.Kuntze	

GUIDELINES
FOR THE CONDUCT OF TESTS
FOR DISTINCTNESS, UNIFORMITY AND STABILITY

Alternative Names:^{*}

<i>Botanical name</i>	<i>English</i>	<i>French</i>	<i>German</i>	<i>Spanish</i>
<i>Camellia L.</i>	Camellia	Camélia	Kamelie	Camelia

The purpose of these guidelines (“Test Guidelines”) is to elaborate the principles contained in the General Introduction (document TG/1/3), and its associated TGP documents, into detailed practical guidance for the harmonized examination of distinctness, uniformity and stability (DUS) and, in particular, to identify appropriate characteristics for the examination of DUS and production of harmonized variety descriptions.

ASSOCIATED DOCUMENTS

These Test Guidelines should be read in conjunction with the General Introduction and its associated TGP documents.

Other associated UPOV documents: TG/TEA (*Camellia sinensis* L. O. Kuntze).

* These names were correct at the time of the introduction of these Test Guidelines but may be revised or updated. [Readers are advised to consult the UPOV Code, which can be found on the UPOV Website (www.upov.int), for the latest information.]

1. Subject of these Test Guidelines

These Test Guidelines apply to all varieties of *Camellia* L. excluding *Camellia sinensis* (L.) O. Kuntze.

2. Material Required

2.1 The competent authorities decide on the quantity and quality of the plant material required for testing the variety and when and where it is to be delivered. Applicants submitting material from a State other than that in which the testing takes place must ensure that all customs formalities and phytosanitary requirements are complied with.

2.2 The material is to be supplied in the form of plants capable of flowering and expressing all relevant characteristics of the variety during the first or later growing cycle.

2.3 The minimum quantity of plant material, to be supplied by the applicant, should be:

10 plants.

2.4 The plant material supplied should be visibly healthy, not lacking in vigor, nor affected by any important pest or disease.

2.5 The plant material should not have undergone any treatment which would affect the expression of the characteristics of the variety, unless the competent authorities allow or request such treatment. If it has been treated, full details of the treatment must be given.

3. Method of Examination

3.1 *Number of Growing Cycles*

The minimum duration of tests should normally be a single growing cycle.

3.2 *Testing Place*

Tests are normally conducted at one place. In the case of tests conducted at more than one place, guidance is provided in TGP/9 "Examining Distinctness".

3.3 *Conditions for Conducting the Examination*

3.3.1 The tests should be carried out under conditions ensuring satisfactory growth for the expression of the relevant characteristics of the variety and for the conduct of the examination.

3.3.2 Observation of color by eye

Because daylight varies, color determinations made against a color chart should be made either in a suitable cabinet providing artificial daylight or in the middle of the day in a room without direct sunlight. The spectral distribution of the illuminant for artificial daylight should conform with the CIE Standard of Preferred Daylight D 6500 and should fall within the tolerances set out in the British Standard 950, Part I. These determinations should be

made with the plant part placed against a white background. The color chart and version used should be specified in the variety description.

3.4 *Test Design*

3.4.1 Each test should be designed to result in a total of at least 10 plants.

3.4.2 The design of the tests should be such that plants or parts of plants may be removed for measurement or counting without prejudice to the observations which must be made up to the end of the growing cycle.

3.5 *Additional Tests*

Additional tests, for examining relevant characteristics, may be established.

4. Assessment of Distinctness, Uniformity and Stability

4.1 *Distinctness*

4.1.1 General Recommendations

It is of particular importance for users of these Test Guidelines to consult the General Introduction prior to making decisions regarding distinctness. However, the following points are provided for elaboration or emphasis in these Test Guidelines.

4.1.2 Consistent Differences

The differences observed between varieties may be so clear that more than one growing cycle is not necessary. In addition, in some circumstances, the influence of the environment is not such that more than a single growing cycle is required to provide assurance that the differences observed between varieties are sufficiently consistent. One means of ensuring that a difference in a characteristic, observed in a growing trial, is sufficiently consistent is to examine the characteristic in at least two independent growing cycles.

4.1.3 Clear Differences

Determining whether a difference between two varieties is clear depends on many factors, and should consider, in particular, the type of expression of the characteristic being examined, i.e. whether it is expressed in a qualitative, quantitative, or pseudo-qualitative manner. Therefore, it is important that users of these Test Guidelines are familiar with the recommendations contained in the General Introduction prior to making decisions regarding distinctness.

4.1.4 Number of Plants / Parts of Plants to be Examined

Unless otherwise indicated, for the purposes of distinctness, all observations on single plants should be made on 9 plants or parts taken from each of 9 plants and any other observations made on all plants in the test, disregarding any off-type plants.

4.1.5 Method of Observation

The recommended method of observing the characteristic for the purposes of distinctness is indicated by the following key in the second column of the Table of Characteristics (see document TGP/9 “Examining Distinctness”, Section 4 “Observation of characteristics”):

MG: single measurement of a group of plants or parts of plants

MS: measurement of a number of individual plants or parts of plants

VG: visual assessment by a single observation of a group of plants or parts of plants

VS: visual assessment by observation of individual plants or parts of plants

Type of observation: visual (V) or measurement (M)

“Visual” observation (V) is an observation made on the basis of the expert’s judgment. For the purposes of this document, “visual” observation refers to the sensory observations of the experts and, therefore, also includes smell, taste and touch. Visual observation includes observations where the expert uses reference points (e.g. diagrams, example varieties, side-by-side comparison) or non-linear charts (e.g. color charts). Measurement (M) is an objective observation against a calibrated, linear scale e.g. using a ruler, weighing scales, colorimeter, dates, counts, etc.

Type of record: for a group of plants (G) or for single, individual plants (S)

For the purposes of distinctness, observations may be recorded as a single record for a group of plants or parts of plants (G), or may be recorded as records for a number of single, individual plants or parts of plants (S). In most cases, “G” provides a single record per variety and it is not possible or necessary to apply statistical methods in a plant-by-plant analysis for the assessment of distinctness.

In cases where more than one method of observing the characteristic is indicated in the Table of Characteristics (e.g. VG/MG), guidance on selecting an appropriate method is provided in document TGP/9, Section 4.2.

4.2 Uniformity

4.2.1 It is of particular importance for users of these Test Guidelines to consult the General Introduction prior to making decisions regarding uniformity. However, the following points are provided for elaboration or emphasis in these Test Guidelines:

4.2.2 For the assessment of uniformity, a population standard of 1% and an acceptance probability of at least 95 % should be applied. In the case of a sample size of 10 plants, 1 off-type is allowed.

4.3 Stability

4.3.1 In practice, it is not usual to perform tests of stability that produce results as certain as those of the testing of distinctness and uniformity. However, experience has demonstrated that, for many types of variety, when a variety has been shown to be uniform, it can also be considered to be stable.

4.3.2 Where appropriate, or in cases of doubt, stability may be further examined by testing a new plant stock to ensure that it exhibits the same characteristics as those shown by the initial material supplied.

5. Grouping of Varieties and Organization of the Growing Trial

5.1 The selection of varieties of common knowledge to be grown in the trial with the candidate varieties and the way in which these varieties are divided into groups to facilitate the assessment of distinctness are aided by the use of grouping characteristics.

5.2 Grouping characteristics are those in which the documented states of expression, even where produced at different locations, can be used, either individually or in combination with other such characteristics: (a) to select varieties of common knowledge that can be excluded from the growing trial used for examination of distinctness; and (b) to organize the growing trial so that similar varieties are grouped together.

5.3 The following have been agreed as useful grouping characteristics:

- (a) Plant: growth habit (characteristic 1)
- (b) Leaf blade: length (characteristic 9)
- (c) Leaf blade: margin (characteristic 23)
- (d) Flower: diameter (characteristic 29)
- (e) Flower: form (characteristic 30)
- (f) Flower: presence of petaloids (characteristic 31)
- (g) Petal: main color (characteristic 41), with the following groups:
 - Gr.1: white
 - Gr.2: yellow
 - Gr.3: orange
 - Gr.4: pink
 - Gr.5: red
 - Gr.6: purple
- (h) Petal: secondary color (characteristic 43)
- (i) Petal: distribution of secondary color (characteristic 44)
- (j) Time of flowering (characteristic 50)

5.4 Guidance for the use of grouping characteristics, in the process of examining distinctness, is provided through the General Introduction and document TGP/9 "Examining Distinctness".

6. Introduction to the Table of Characteristics

6.1 *Categories of Characteristics*

6.1.1 Standard Test Guidelines Characteristics

Standard Test Guidelines characteristics are those which are approved by UPOV for examination of DUS and from which members of the Union can select those suitable for their particular circumstances.

6.1.2 Asterisked Characteristics

Asterisked characteristics (denoted by *) are those included in the Test Guidelines which are important for the international harmonization of variety descriptions and should always be examined for DUS and included in the variety description by all members of the Union, except when the state of expression of a preceding characteristic or regional environmental conditions render this inappropriate.

6.2 *States of Expression and Corresponding Notes*

6.2.1 States of expression are given for each characteristic to define the characteristic and to harmonize descriptions. Each state of expression is allocated a corresponding numerical note for ease of recording of data and for the production and exchange of the description.

6.2.2 In the case of qualitative and pseudo-qualitative characteristics (see Chapter 6.3), all relevant states of expression are presented in the characteristic. However, in the case of quantitative characteristics with 5 or more states, an abbreviated scale may be used to minimize the size of the Table of Characteristics. For example, in the case of a quantitative characteristic with 9 states, the presentation of states of expression in the Test Guidelines may be abbreviated as follows:

State	Note
small	3
medium	5
large	7

However, it should be noted that all of the following 9 states of expression exist to describe varieties and should be used as appropriate:

State	Note
very small	1
very small to small	2
small	3
small to medium	4
medium	5
medium to large	6
large	7
large to very large	8
very large	9

6.2.3 Further explanation of the presentation of states of expression and notes is provided in document TGP/7 “Development of Test Guidelines”.

6.3 Types of Expression

An explanation of the types of expression of characteristics (qualitative, quantitative and pseudo-qualitative) is provided in the General Introduction.

6.4 Example Varieties

6.4.1 Where appropriate, example varieties are provided to clarify the states of expression of each characteristic.

6.4.2 Example varieties contained in the Table of Characteristics originally belong to following parent species:

Camellia amplexicaulis: Fen Bao Jing Cha

Camellia changii (*Camellia azalea*): Chun Jiang Zhi Xia

Camellia japonica: Anticipation, Bai Bao Ta, Bai Mu Dan, Betty Foy Sanders, Bian Ye Kuan Cai Dai, Cai Fu Rong, Cai Ye Hong Lu Zhen, Camilla Hebert, Chang E Cai, Chong Qing Hong, Coletti, Da Hong Jin Xin, Da Hong Mu Dan, Da Zhu Sha, Elegans Champagne, Fei Bie Cha, Fen Fu Rong, Fen Xia, Grape Soda, Kujaku-tsubaki, Helen Bower, Holly Bright, Hong Lu Zhen, Hong Shi Ba Xue Shi, Hua Bao Zhu, Hua Mu Dan, Jin Jiang Mu Dan, Jin Pan Li Zhi, Kingyo-tsubaki, Lipstick, L.T. Dees, Margaret Davis, Mary Agnes Patin, Masterpiece, Night Rider, Nokogiriba, Nuccio's # 4310, Nuccio's Bella Rossa, Nuccio's Cameo, Pen Sha, Pu Tao Hong, Raspberry Ice, Ren Mian Tao Hua, Royal Velvet, Sai Luo Yang, Shi Ba Xue Shi, Shi Zi Xiao, Swan Lake, Unryu-tsubaki, Wen Ban Fei Ye Cha, Xiao Tao Hong, Xu Bian, Xue Ta, Yi Lan Jiao, Zao Chun Da Hong Qiu, Zhuang Yuan Hong

Camellia minutiflora: Wei Hua Lian Rui Cha

Camellia reticulata: Bill Goertz, Da Li Cha, Da Tao Hong, Hou Ye De Chi, Massee Lane, Pink Dahlia, Tong Zi Mian, Zhu Sha Zi Pao

Camellia sasanqua: First Cover, Xia Mei Gui

Hybrids: Dong Hai Guang Yao

6.5 *Legend*

(*) Asterisked characteristic – see Chapter 6.1.2

QL Qualitative characteristic – see Chapter 6.3

QN Quantitative characteristic – see Chapter 6.3

PQ Pseudo-qualitative characteristic – see Chapter 6.3

MG, MS, VG, VS – see Chapter 4.1.5

(a)-(g) See Explanations on the Table of Characteristics in Chapter 8.1.

8. Explanations on the Table of Characteristics

8.1 Explanations covering several characteristics

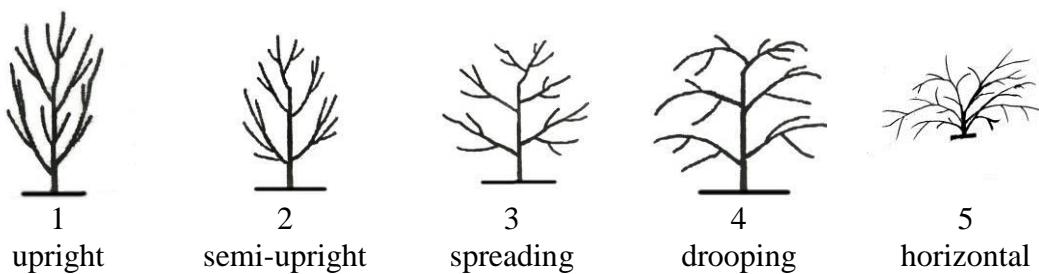

Characteristics containing the following key in the second column of the Table of Characteristics should be examined as indicated below:

- (a) Observations should be made on buds just before they sprout in the spring.
- (b) Observations should be made on young shoots.
- (c) Observations should be made on the mature leaves in the middle third of the shoot in summer or autumn.
- (d) Observations should be made on the sepals just before flowering.
- (e) Observations should be made on fully open flowers.
- (f) Observations should be made on petals in first outer row.
- (g) Flower: diagram.

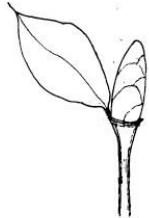

8.2 Explanations for individual characteristics

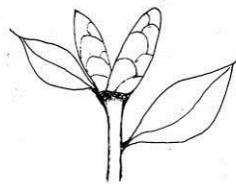

Ad. 1: Plant: growth habit

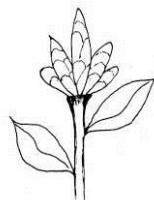

Ad. 5: Terminal vegetative bud: number

1
one

2
two

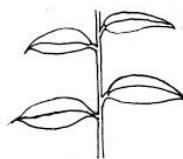

3
more than two

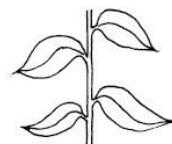

Ad. 7: Leaf: attitude

1
upwards

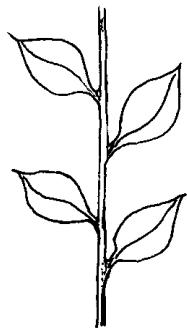

2
outwards

3
downwards

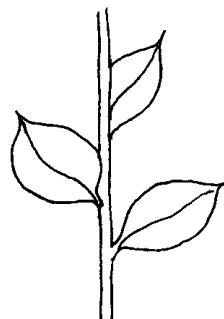

Ad. 8: Leaf: arrangement

1
alternate

2
perpendicular

3
spiral

To be observed from above: alternate arrangement means leaves positioned at 180° on stem, perpendicular arrangement means leaves positioned at 90° on stem and spiral arrangement means leaves positioned at less than 90° on stem.

Ad. 11: Leaf blade: position of broadest part

1

below middle third

2

in middle third

3

above middle third

Ad. 12: Leaf blade: shape of base

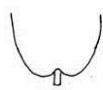

1
acute

2
obtuse

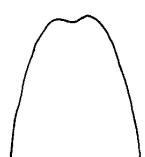

3
rounded

4
cordate

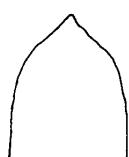

Ad. 13: Leaf blade: shape of apex

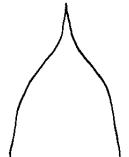

1
retuse

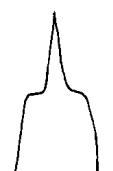

2
rounded

3
short
acuminate

4
medium
acuminate

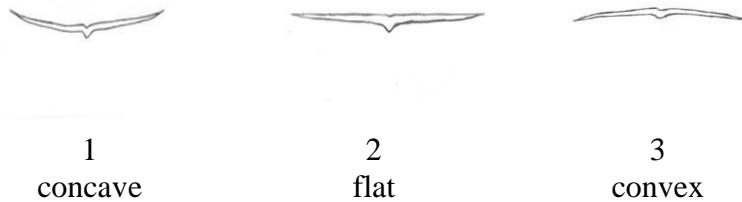

5
long
acuminate

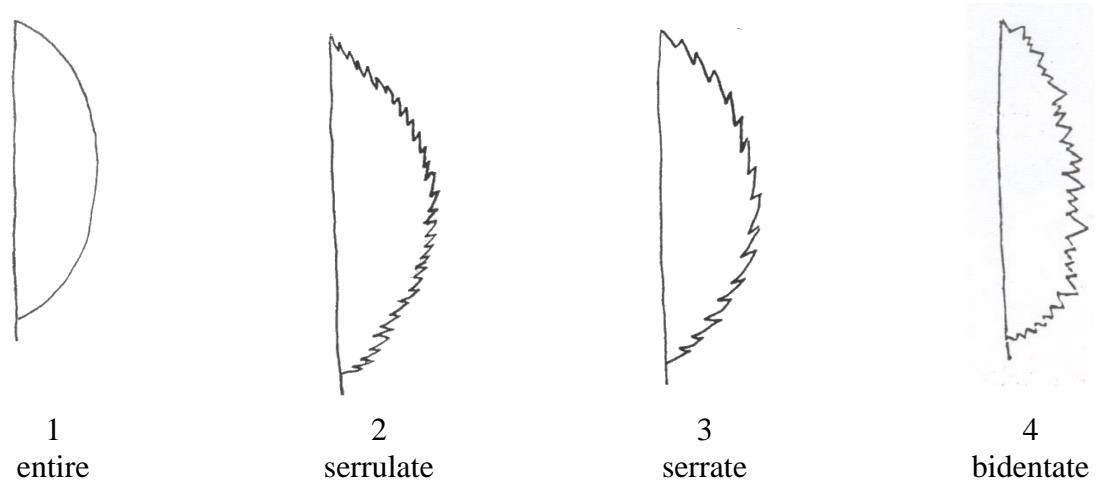

6
divided

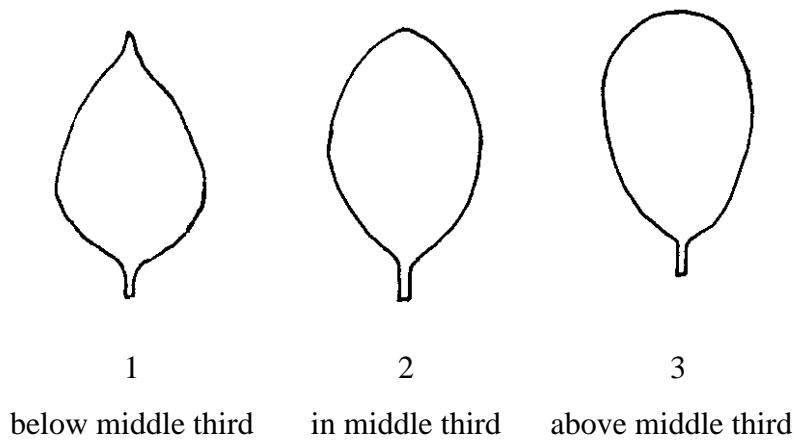

Ad. 22: Leaf blade: shape in cross section

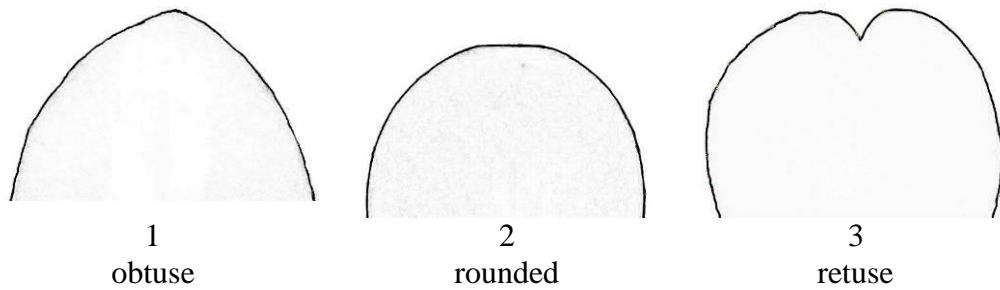

Ad. 23: Leaf blade: margin

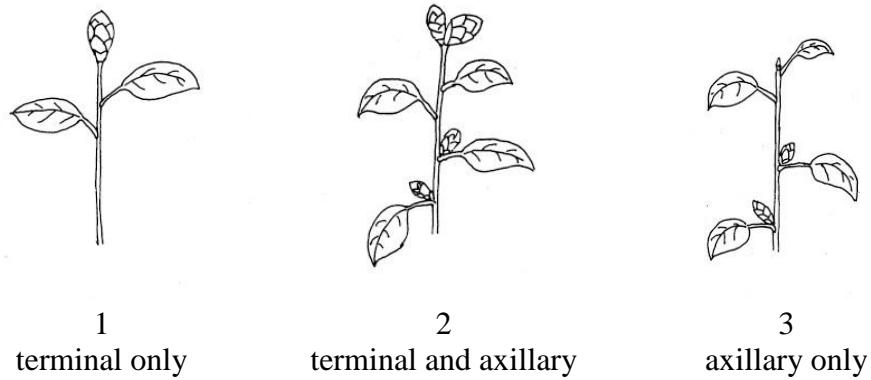

Ad. 25: Sepal: position of broadest part

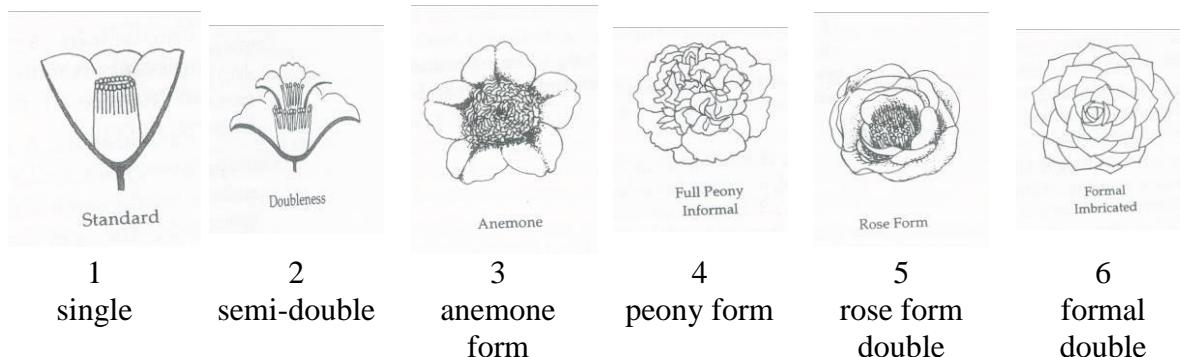

Ad. 27: Sepal: shape of apex

Ad. 28: Flower bud: arrangement

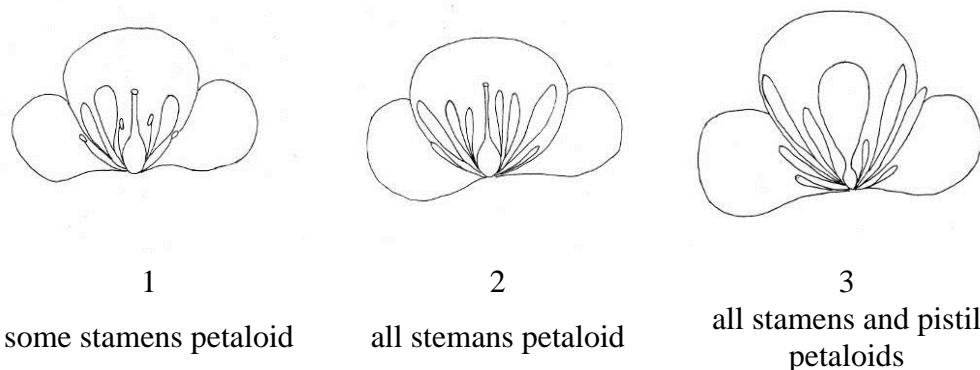

Ad. 30: Flower: form

1. The single is the typical wild camellia flower form with five to seven irregular, overlapping petals in a single row and a more or less columnar stamen cluster.
2. The semi-double has in excess of eight petals in two or more rows with a conspicuous stamen centre, with no petaloids. The petals may be regular, irregular or loose.

3. The anemone form, has one or more outer rows of large petals while, in the centre, the stamens have become totally petaloid and form a convex mass in the centre of the flower.
4. The peony form has loose petals, usually irregular or wavy, becoming smaller to the centre, where they are divided into by fascicles of stamens; sometimes the centre is a mixture of small petals, petaloids and stamens; or is a convex mass of a mixture of irregular, twisted petals and petaloids, with the stamen, if any, obscured.
5. The rose form double has multiple rows of imbricated petals opening through a bud-shaped centre to show some stamens in a concave centre when fully open.
6. The formal double has many rows of regular, overlapping petals and has no stamens.

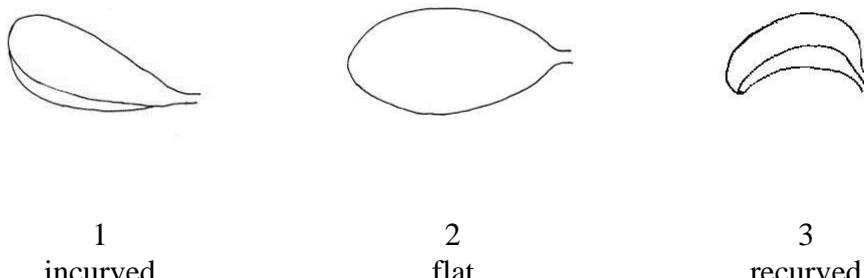

Ad. 33: Flower: petaloid organs

Ad. 35: Petal: shape of apex

Ad. 37: Petal: curvature of longitudinal axis

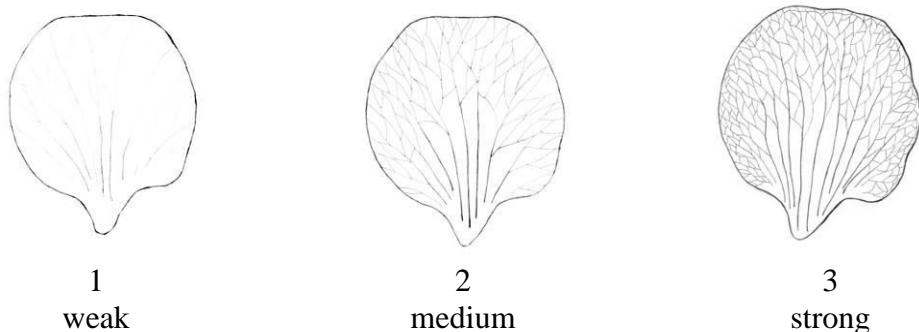

Ad. 38: Flower: shape of petals of first outer row

← broadest part →		
(below middle)	at middle	(above middle)
narrow (elongated) →	 2 oblong	 5 obovate
	 3 circular	
width (ratio length/width) ↓	 4 oblanceolate	 6 obcordate

Ad. 39: Petal: undulation of margin

Ad. 40: Petal: conspicuousness of veins

Ad. 41: Petal: main color

The main color is determined as the color with the largest surface area present on the upper side of a petal.

Ad. 43: Petal: secondary color

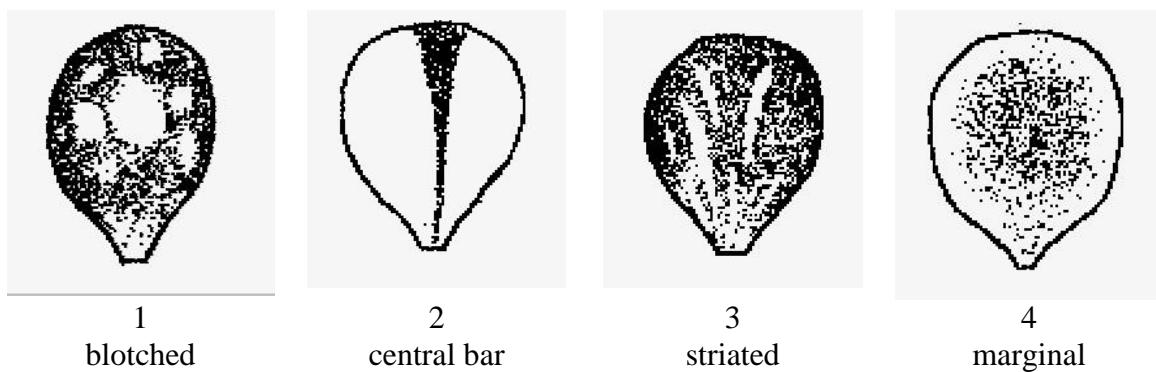

The secondary color is determined as the color with the second largest surface area, usually observed as a defined pattern on the upper side of a petal.

Ad. 44: Petal: distribution of secondary color

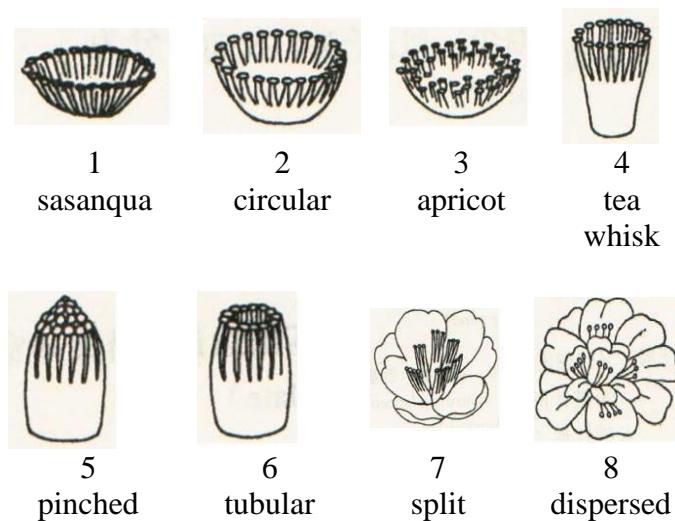

The main color is determined as the color with the largest surface area present on the upper side of a petal.

The secondary color is determined as the color with the second largest surface area, usually observed as a defined pattern on the upper side of a petal.

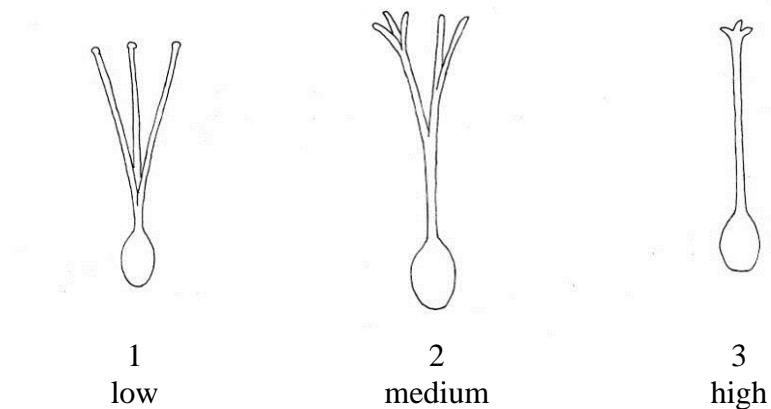

In cases where the area of the main and secondary colors are nearly equal, the darker color should be considered to be the main color.

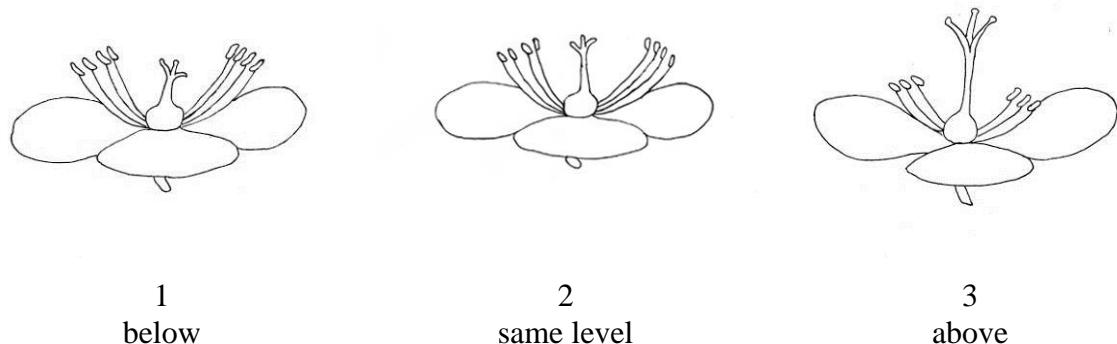

Ad. 45: Stamens: arrangements

Ad. 47: Style: position of splitting

Ad. 48: Stigma: position in relation to stamens

6. Similar varieties and differences from these varieties

Please use the following table and box for comments to provide information on how your candidate variety differs from the variety (or varieties) which, to the best of your knowledge, is (or are) most similar. This information may help the examination authority to conduct its examination of distinctness in a more efficient way.

Denomination(s) of variety(ies) similar to your candidate variety	Characteristic(s) in which your candidate variety differs from the similar variety(ies)	Describe the expression of the characteristic(s) for the similar variety(ies)	Describe the expression of the characteristic(s) for your candidate variety
<i>Example</i>	<i>Plant: growth habit</i>	<i>semi-upright</i>	<i>upright</i>
Comments:			

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

#7. Additional information which may help in the examination of the variety

7.1 In addition to the information provided in sections 5 and 6, are there any additional characteristics which may help to distinguish the variety?

Yes [] No []

(If yes, please provide details)

7.2 Are there any special conditions for growing the variety or conducting the examination?

Yes [] No []

(If yes, please provide details)

7.3 Other information

A representative color image of the variety should accompany the Technical Questionnaire.

8. Authorization for release

(a) Does the variety require prior authorization for release under legislation concerning the protection of the environment, human and animal health?

Yes [] No []

(b) Has such authorization been obtained?

Yes [] No []

If the answer to (b) is yes, please attach a copy of the authorization.

[#] Authorities may allow certain of this information to be provided in a confidential section of the Technical Questionnaire.

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

9. Information on plant material to be examined or submitted for examination.

9.1 The expression of a characteristic or several characteristics of a variety may be affected by factors, such as pests and disease, chemical treatment (e.g. growth retardants or pesticides), effects of tissue culture, different rootstocks, scions taken from different growth phases of a tree, etc.

9.2 The plant material should not have undergone any treatment which would affect the expression of the characteristics of the variety, unless the competent authorities allow or request such treatment. If the plant material has undergone such treatment, full details of the treatment must be given. In this respect, please indicate below, to the best of your knowledge, if the plant material to be examined has been subjected to:

- (a) Microorganisms (e.g. virus, bacteria, phytoplasma) Yes [] No []
(b) Chemical treatment (e.g. growth retardant, pesticide) Yes [] No []
(c) Tissue culture Yes [] No []
(d) Other factors Yes [] No []

Please provide details for where you have indicated "yes".

.....

10. I hereby declare that, to the best of my knowledge, the information provided in this form is correct:
