## INTERNATIONAL UNION FOR THE PROTECTION OF NEW VARIETIES OF PLANTS

Geneva

### HOSTA

UPOV Code: HOSTA

*Hosta* Tratt.

### GUIDELINES

#### FOR THE CONDUCT OF TESTS

#### FOR DISTINCTNESS, UNIFORMITY AND STABILITY

#### Alternative Names:<sup>\*</sup>

Botanical name	English	French	German	Spanish
<i>Hosta</i> Tratt.	Funkia, Hosta, Plantain Lily	Funkia, Hémérocalle du Japon	Funkie	Hosta

The purpose of these guidelines (“Test Guidelines”) is to elaborate the principles contained in the General Introduction (document TG/1/3), and its associated TGP documents, into detailed practical guidance for the harmonized examination of distinctness, uniformity and stability (DUS) and, in particular, to identify appropriate characteristics for the examination of DUS and production of harmonized variety descriptions.

#### ASSOCIATED DOCUMENTS

These Test Guidelines should be read in conjunction with the General Introduction and its associated TGP documents.

---

\* These names were correct at the time of the introduction of these Test Guidelines but may be revised or updated. [Readers are advised to consult the UPOV Code, which can be found on the UPOV Website ([www.upov.int](http://www.upov.int)), for the latest information.]

1. Subject of these Test Guidelines

These Test Guidelines apply to all varieties of *Hosta* Tratt.

2. Material Required

2.1 The competent authorities decide on the quantity and quality of the plant material required for testing the variety and when and where it is to be delivered. Applicants submitting material from a State other than that in which the testing takes place must ensure that all customs formalities and phytosanitary requirements are complied with.

2.2 The material is to be supplied in the form of two year old plants ready to flower and able to express all their characteristics in the first year of examination.

2.3 The minimum quantity of plant material, to be supplied by the applicant, should be:

20 plants.

2.4 The plant material supplied should be visibly healthy, not lacking in vigor, nor affected by any important pest or disease.

2.5 The plant material should not have undergone any treatment which would affect the expression of the characteristics of the variety, unless the competent authorities allow or request such treatment. If it has been treated, full details of the treatment must be given.

3. Method of Examination

3.1 *Number of Growing Cycles*

The minimum duration of tests should normally be two independent growing cycles.

3.2 *Testing Place*

Tests are normally conducted at one place. In the case of tests conducted at more than one place, guidance is provided in TGP/9 "Examining Distinctness".

3.3 *Conditions for Conducting the Examination*

3.3.1 The tests should be carried out under conditions ensuring satisfactory growth for the expression of the relevant characteristics of the variety and for the conduct of the examination.

3.3.2 Because daylight varies, color determinations made against a color chart should be made either in a suitable cabinet providing artificial daylight or in the middle of the day in a room without direct sunlight. The spectral distribution of the illuminant for artificial daylight should conform with the CIE Standard of Preferred Daylight D 6500 and should fall within the tolerances set out in the British Standard 950, Part I. These determinations should be made with the plant part placed against a white background. The color chart and version used should be specified in the variety description.

3.4 *Test Design*

3.4.1 Each test should be designed to result in a total of at least 20 plants.

3.4.2 The design of the tests should be such that plants or parts of plants may be removed for measurement or counting without prejudice to the observations which must be made up to the end of the growing cycle.

3.5 *Additional Tests*

Additional tests, for examining relevant characteristics, may be established.

4. Assessment of Distinctness, Uniformity and Stability

4.1 *Distinctness*

4.1.1 General Recommendations

It is of particular importance for users of these Test Guidelines to consult the General Introduction prior to making decisions regarding distinctness. However, the following points are provided for elaboration or emphasis in these Test Guidelines.

4.1.2 Consistent Differences

The differences observed between varieties may be so clear that more than one growing cycle is not necessary. In addition, in some circumstances, the influence of the environment is not such that more than a single growing cycle is required to provide assurance that the differences observed between varieties are sufficiently consistent. One means of ensuring that a difference in a characteristic, observed in a growing trial, is sufficiently consistent is to examine the characteristic in at least two independent growing cycles.

4.1.3 Clear Differences

Determining whether a difference between two varieties is clear depends on many factors, and should consider, in particular, the type of expression of the characteristic being examined, i.e. whether it is expressed in a qualitative, quantitative, or pseudo-qualitative manner. Therefore, it is important that users of these Test Guidelines are familiar with the recommendations contained in the General Introduction prior to making decisions regarding distinctness.

4.1.4 Number of Plants / Parts of Plants to be Examined

Unless otherwise indicated, for the purposes of distinctness, all observations on single plants should be made on 10 plants or parts taken from each of 10 plants and any other observations made on all plants in the test, disregarding any off-type plants.

4.1.5 Method of Observation

The recommended method of observing the characteristic for the purposes of distinctness is indicated by the following key in the second column of the Table of Characteristics (see document TGP/9 "Examining Distinctness", Section 4 "Observation of characteristics"):

MG: single measurement of a group of plants or parts of plants

MS: measurement of a number of individual plants or parts of plants

VG: visual assessment by a single observation of a group of plants or parts of plants

VS: visual assessment by observation of individual plants or parts of plants

Type of observation: visual (V) or measurement (M)

"Visual" observation (V) is an observation made on the basis of the expert's judgment. For the purposes of this document, "visual" observation refers to the sensory observations of the experts and, therefore, also includes smell, taste and touch. Visual observation includes observations where the expert uses reference points (e.g. diagrams, example varieties, side-by-side comparison) or non-linear charts (e.g. color charts). Measurement (M) is an objective observation against a calibrated, linear scale e.g. using a ruler, weighing scales, colorimeter, dates, counts, etc.

Type of record: for a group of plants (G) or for single, individual plants (S)

For the purposes of distinctness, observations may be recorded as a single record for a group of plants or parts of plants (G), or may be recorded as records for a number of single, individual plants or parts of plants (S). In most cases, "G" provides a single record per variety and it is not possible or necessary to apply statistical methods in a plant-by-plant analysis for the assessment of distinctness.

In cases where more than one method of observing the characteristic is indicated in the Table of Characteristics (e.g. VG/MG), guidance on selecting an appropriate method is provided in document TGP/9, Section 4.2.

#### 4.2 *Uniformity*

4.2.1 It is of particular importance for users of these Test Guidelines to consult the General Introduction prior to making decisions regarding uniformity. However, the following points are provided for elaboration or emphasis in these Test Guidelines:

4.2.2 For the assessment of uniformity of vegetatively propagated varieties, a population standard of 1% and an acceptance probability of at least 95% should be applied. In the case of a sample size of 20 plants, 1 off-type is allowed.

#### 4.3 *Stability*

4.3.1 In practice, it is not usual to perform tests of stability that produce results as certain as those of the testing of distinctness and uniformity. However, experience has demonstrated that, for many types of variety, when a variety has been shown to be uniform, it can also be considered to be stable.

4.3.2 Where appropriate, or in cases of doubt, stability may be further examined by testing a new plant stock to ensure that it exhibits the same characteristics as those shown by the initial material supplied.

### 5. Grouping of Varieties and Organization of the Growing Trial

5.1 The selection of varieties of common knowledge to be grown in the trial with the candidate varieties and the way in which these varieties are divided into groups to facilitate the assessment of distinctness are aided by the use of grouping characteristics.

5.2 Grouping characteristics are those in which the documented states of expression, even where produced at different locations, can be used, either individually or in combination with other such characteristics: (a) to select varieties of common knowledge that can be excluded from the growing trial used for examination of distinctness; and (b) to organize the growing trial so that similar varieties are grouped together.

5.3 The following have been agreed as useful grouping characteristics:

- (a) Leaf blade: shape (characteristic 11)
- (b) Leaf blade: color covering the largest surface area, with the following groups:
  - white
  - light yellow
  - medium yellow
  - dark yellow
  - light green
  - medium green
  - dark green
  - blue green
- (c) Leaf blade: color covering the second largest surface area, with the following groups:
  - white
  - light yellow
  - medium yellow
  - dark yellow
  - light green
  - medium green
  - dark green
  - blue green

5.4 Guidance for the use of grouping characteristics, in the process of examining distinctness, is provided through the General Introduction and document TGP/9 "Examining Distinctness".

6. Introduction to the Table of Characteristics

6.1 *Categories of Characteristics*

6.1.1 Standard Test Guidelines Characteristics

Standard Test Guidelines characteristics are those which are approved by UPOV for examination of DUS and from which members of the Union can select those suitable for their particular circumstances.

6.1.2 Asterisked Characteristics

Asterisked characteristics (denoted by \*) are those included in the Test Guidelines which are important for the international harmonization of variety descriptions and should always be examined for DUS and included in the variety description by all members of the Union, except when the state of expression of a preceding characteristic or regional environmental conditions render this inappropriate.

6.2 *States of Expression and Corresponding Notes*

6.2.1 States of expression are given for each characteristic to define the characteristic and to harmonize descriptions. Each state of expression is allocated a corresponding numerical note for ease of recording of data and for the production and exchange of the description.

6.2.2 In the case of qualitative and pseudo-qualitative characteristics (see Chapter 6.3), all relevant states of expression are presented in the characteristic. However, in the case of quantitative characteristics with 5 or more states, an abbreviated scale may be used to minimize the size of the Table of Characteristics. For example, in the case of a quantitative characteristic with 9 states, the presentation of states of expression in the Test Guidelines may be abbreviated as follows:

State	Note
small	3
medium	5
large	7

However, it should be noted that all of the following 9 states of expression exist to describe varieties and should be used as appropriate:

State	Note
very small	1
very small to small	2
small	3
small to medium	4
medium	5
medium to large	6
large	7
large to very large	8
very large	9

6.2.3 Further explanation of the presentation of states of expression and notes is provided in document TGP/7 "Development of Test Guidelines".

6.3 *Types of Expression*

An explanation of the types of expression of characteristics (qualitative, quantitative and pseudo-qualitative) is provided in the General Introduction.

6.4 *Example Varieties*

Where appropriate, example varieties are provided to clarify the states of expression of each characteristic.

6.5 *Legend*

- (\*) Asterisked characteristic – see Chapter 6.1.2
- QL Qualitative characteristic – see Chapter 6.3
- QN Quantitative characteristic – see Chapter 6.3
- PQ Pseudo-qualitative characteristic – see Chapter 6.3
- MG, MS, VG, VS – see Chapter 4.1.5
- (a)-(e) See Explanations on the Table of Characteristics in Chapter 8.1.
- (+) See Explanations on the Table of Characteristics in Chapter 8.2.

8. Explanations on the Table of Characteristics

8.1 *Explanations covering several characteristics*

Characteristics containing the following key in the second column of the Table of Characteristics should be examined as indicated below:

- (a) Plant, petiole and leaf characteristics should be observed before flowering.
- (b) Where the characteristic refers to colors as "one", "two" etc., they are to be recorded in the order that they appear on the RHS chart, i.e. color one is the one with the lowest number, color two with the second lowest and so on. For example, if the leaves are Green 137A dotted with White 155A, Green 137A will be color one and White 155A color two. If two colors are on the same leaf of the chart, for example Green 137A and Green 137D, 137A is regarded as the lower numbered color. It should be noted that under this system, ranking is independent of surface area, so the color covering the greatest surface area may be classified as color three or four. The Guideline makes provision for five colors; if there are more, the color[s] with the smallest surface area[s] should be discounted.
- (c) Characteristics of the inflorescence should be observed when first flowers are open.
- (d) Length of peduncle should be observed when all flowers are open.
- (e) Characteristics of the bract should be observed on the bract of the first flower in the inflorescence.

A photograph of the leaf could be provided in conjunction with the description in order to clarify the color distribution and/or pattern. However, a warning should be added to this photograph, explaining that the primary intent of the photograph is to show the distribution and/or pattern of the colors on the plant part rather than the actual colors. Color on photographs can be affected by the technology of the camera and the facilities used to display the photograph (printer, overhead projector, etc.).

8.2 *Explanations for individual characteristics*

Ad. 1: Plant: color of first scaly leaves

The characteristic should be observed when the first shoots emerge and before opening of the leaves.

Ad. 5: Petiole: shape of inner side in cross section

Ad. 10: Leaf blade: position of broadest part

Ad 11: Leaf blade: shape

		← broadest part →	
		below middle	at middle
width (ratio length/width)	↓ narrow (high)		
	→		
			
	↙ broad (low)		
			

Ad. 12: Leaf blade: shape of base

Ad. 13: Leaf blade: shape of apex (excluding tip)

Ad. 15: Leaf blade: color 1: distribution

Ad. 19: Leaf blade: color 2: distribution

Ad. 23: Leaf blade: color 3: distribution

Ad. 27: Leaf blade: color 4: distribution

Ad. 31: Leaf blade: color 5: distribution

- Ad. 16: Leaf blade: color 1: pattern  
Ad. 20: Leaf blade: color 2: pattern  
Ad. 24: Leaf blade: color 3: pattern  
Ad. 28: Leaf blade: color 4: pattern  
Ad. 32: Leaf blade: color 5: pattern

1  
flamed (green)

2  
striped (light yellow)

3  
spotted (light yellow)

4  
in sectors (yellow green)

5  
marbled (grey green)

6  
marginated (white)

- Ad. 17: Leaf blade: color 1: total area
- Ad. 21: Leaf blade: color 2: total area
- Ad. 25: Leaf blade: color 3: total area
- Ad. 29: Leaf blade: color 4: total area
- Ad. 33: Leaf blade: color 5: total area

The area has to be compared to the whole area of the leaf surface.

In order to provide an illustration of the recording method, two worked examples are provided below. The first describes a leaf with only one color, the second a leaf with several colors.

Worked Example One – (variety with only one leaf color)

- 14. Leaf blade: color 1 – RHS Colour Chart – ca. RHS 144 A - dark green
- 15. Leaf blade: color 1: distribution – throughout (6)
- 16. Leaf blade: color 1: pattern – solid or nearly solid (7)
- 17. Leaf blade: color 1: total area – very large (9)
- 18. Leaf blade: color 2 – RHS Colour Chart – not applicable
- 19. Leaf blade: color 2: distribution – none (1)
- 20. Leaf blade: color 2: pattern – not applicable
- 21. Leaf blade: color 2: total area – not applicable
- 22. Leaf blade: color 3 – RHS Colour Chart – not applicable
- 23. Leaf blade: color 3: distribution – none (1)
- 24. Leaf blade: color 3: pattern – not applicable
- 25. Leaf blade: color 3: total area – not applicable
- 26. Leaf blade: color 4 – RHS Colour Chart – not applicable
- 27. Leaf blade: color 4: distribution – none (1)
- 28. Leaf blade: color 4: pattern – not applicable
- 29. Leaf blade: color 4: total area – not applicable
- 30. Leaf blade: color 5 – RHS Colour Chart – not applicable
- 31. Leaf blade: color 5: distribution – none (1)
- 32. Leaf blade: color 5: pattern – not applicable
- 33. Leaf blade: color 5: total area – not applicable

Worked Example Two – (variety with several leaf colors)

14. Leaf blade: color 1 – RHS Colour Chart – ca. RHS 146 A – brown green
15. Leaf blade: color 1: distribution – at marginal zone (4)
16. Leaf blade: color 1: pattern – solid or nearly solid (7)
17. Leaf blade: color 1: total area – medium (5)
18. Leaf blade: color 2 – RHS Colour Chart – ca. RHS 151 A – green brown
19. Leaf blade: color 2: distribution – irregular (6)
20. Leaf blade: color 2: pattern – in sectors (4)
21. Leaf blade: color 2: total area – small (3)
22. Leaf blade: color 3 – RHS Colour Chart – ca. RHS 155 A - white
23. Leaf blade: color 3: distribution – at center (3)
24. Leaf blade: color 3: pattern – flamed (1)
25. Leaf blade: color 3: total area – small to medium (4)
26. Leaf blade: color 4 – RHS Colour Chart – not applicable
27. Leaf blade: color 4: distribution – none (1)
28. Leaf blade: color 4: pattern – not applicable
29. Leaf blade: color 4: total area – not applicable
30. Leaf blade: color 5 – RHS Colour Chart – not applicable
31. Leaf blade: color 5: distribution – none (1)
32. Leaf blade: color 5: pattern – not applicable
33. Leaf blade: color 5: total area – not applicable

Ad. 35: Leaf blade: number of parallel veins

1  
few

3  
many

Ad.36: Leaf blade: degree of bulging

1  
absent or very weak

5  
very strong

Ad. 37: Leaf blade: blistering

1  
absent or weak

2  
medium

3  
strong

Ad. 39: Leaf blade: twisting

1  
absent or weak

2  
moderate

3  
strong

Ad. 40: Inflorescence: length

Ad. 49: Pedicel: length

Ad. 55: Corolla tube: length

Ad. 57: Corolla: length of outer lobes

Ad. 61: Corolla: length of inner lobes

Ad. 63: Corolla: color of outer side of inner lobes

Ad. 51: Flower: type

- (1) Single: 6 corolla lobes;
- (2) Semi-double: 7 to 11 corolla lobes
- (3) Double: 12 or more corolla lobes

Ad. 52: Perianth: length  
Ad. 53: Perianth: width

Ad. 54: Perianth: shape in lateral view

Ad. 58: Corolla: shape of outer lobes

Ad. 62: Corolla: shape of inner lobes

		← broadest part →	
		below middle	at middle
→ narrow (high)  broad (low) ← width (ratio length/width)		 4 very narrow ovate	
		 3 narrow ovate	 8 narrow elliptic
		 2 medium ovate	 7 medium elliptic
		 1 broad ovate	 6 circular
			 5 broad elliptic

6. Similar varieties and differences from these varieties

*Please use the following table and box for comments to provide information on how your candidate variety differs from the variety (or varieties) which, to the best of your knowledge, is (or are) most similar. This information may help the examination authority to conduct its examination of distinctness in a more efficient way.*

Denomination(s) of variety(ies) similar to your candidate variety	Characteristic(s) in which your candidate variety differs from the similar variety(ies)	Describe the expression of the characteristic(s) for the <b>similar</b> variety(ies)	Describe the expression of the characteristic(s) for <b>your</b> candidate variety
<i>Example</i>	<i>Leaf blade: length</i>	<i>long</i>	<i>medium</i>
Comments:			

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
<p>#7. Additional information which may help in the examination of the variety</p> <p>7.1 In addition to the information provided in sections 5 and 6, are there any additional characteristics which may help to distinguish the variety?</p> <p>Yes [ ] No [ ]</p> <p>(If yes, please provide details)</p> <p>7.2 Are there any special conditions for growing the variety or conducting the examination?</p> <p>Yes [ ] No [ ]</p> <p>(If yes, please provide details)</p> <p>7.3 Other information</p> <p>A representative color image of the variety should accompany the Technical Questionnaire.</p> <p>8. Authorization for release</p> <p>(a) Does the variety require prior authorization for release under legislation concerning the protection of the environment, human and animal health?</p> <p>Yes [ ] No [ ]</p> <p>(b) Has such authorization been obtained?</p> <p>Yes [ ] No [ ]</p> <p>If the answer to (b) is yes, please attach a copy of the authorization.</p>		

# Authorities may allow certain of this information to be provided in a confidential section of the Technical Questionnaire.

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

9. Information on plant material to be examined or submitted for examination.

9.1 The expression of a characteristic or several characteristics of a variety may be affected by factors, such as pests and disease, chemical treatment (e.g. growth retardants or pesticides), effects of tissue culture, different rootstocks, scions taken from different growth phases of a tree, etc.

9.2 The plant material should not have undergone any treatment which would affect the expression of the characteristics of the variety, unless the competent authorities allow or request such treatment. If the plant material has undergone such treatment, full details of the treatment must be given. In this respect, please indicate below, to the best of your knowledge, if the plant material to be examined has been subjected to:

- |   |         |        |
|---|---------|--------|
| (a) Microorganisms (e.g. virus, bacteria, phytoplasma)    | Yes [ ] | No [ ] |
| (b) Chemical treatment (e.g. growth retardant, pesticide) | Yes [ ] | No [ ] |
| (c) Tissue culture  | Yes [ ] | No [ ] |
| (d) Other factors   | Yes [ ] | No [ ] |

Please provide details for where you have indicated "yes".

.....

9.3 Has the plant material to be examined been tested for the presence of virus or other pathogens?

Yes [ ]  
(please provide details as specified by the Authority)

No [ ]

10. I hereby declare that, to the best of my knowledge, the information provided in this form is correct:
