**INTERNATIONAL UNION FOR THE PROTECTION OF NEW VARIETIES OF PLANTS**  
GENEVA

**COFFEE**

UPOV Codes:

COFFE\_ARA; COFFE\_CAN; COFFE ACA

*Coffea arabica* L.; *C. canephora* Pierre ex A. Froehner;  
*C. arabica* × *C. canephora* hybrids

\*

**GUIDELINES  
FOR THE CONDUCT OF TESTS  
FOR DISTINCTNESS, UNIFORMITY AND STABILITY**

Alternative Names:<sup>\*</sup>

<i>Botanical name</i>	<i>English</i>	<i>French</i>	<i>German</i>	<i>Spanish</i>
<i>Coffea arabica</i> L.	Coffee	Caféier	Kaffee	Cafeto
<i>Coffea canephora</i> Pierre ex A. Froehner	Coffee	Caféier	Kaffee	Cafeto

The purpose of these guidelines (“Test Guidelines”) is to elaborate the principles contained in the General Introduction (document TG/1/3), and its associated TGP documents, into detailed practical guidance for the harmonized examination of distinctness, uniformity and stability (DUS) and, in particular, to identify appropriate characteristics for the examination of DUS and production of harmonized variety descriptions.

**ASSOCIATED DOCUMENTS**

These Test Guidelines should be read in conjunction with the General Introduction and its associated TGP documents.

\* These names were correct at the time of the introduction of these Test Guidelines but may be revised or updated. [Readers are advised to consult the UPOV Code, which can be found on the UPOV Website ([www.upov.int](http://www.upov.int)), for the latest information.]

1. Subject of these Test Guidelines

These Test Guidelines apply to all varieties of *Coffea arabica* L. (Arabica type), *Coffea canephora* Pierre ex A. Froehner (Robusta type) and hybrids between *C. arabica* L. and *C. canephora* L..

2. Material Required

2.1 The competent authorities decide on the quantity and quality of the plant material required for testing the variety and when and where it is to be delivered. Applicants submitting material from a State other than that in which the testing takes place must ensure that all customs formalities and phytosanitary requirements are complied with.

2.2 The material is to be supplied in the form of

- (a) six-month- to one-year-old plants on their own roots;
- (b) scions grafted on a rootstock to be specified by the competent authority;
- (c) budwood to produce grafted plants;
- (d) cuttings to produce plants on their own roots; or
- (e) seed

2.3 The minimum quantity of plant material, to be supplied by the applicant, should be:

Vegetatively propagated varieties: 8 one-year-old plants, or budwood or cuttings sufficient to produce 8 plants

Seed-propagated varieties: 50 seeds.

2.4 The plant material supplied should be visibly healthy, not lacking in vigor, nor affected by any important pest or disease.

2.5 The plant material should not have undergone any treatment which would affect the expression of the characteristics of the variety, unless the competent authorities allow or request such treatment. If it has been treated, full details of the treatment must be given.

3. Method of Examination

3.1 *Number of Growing Cycles*

3.1.1 The minimum duration of tests should normally be two independent growing cycles.

3.1.2 The growing cycle is considered to be the duration of a single growing season, beginning with vegetative growth, followed by flowering and fruit harvest.

3.2 *Testing Place*

Tests are normally conducted at one place. In the case of tests conducted at more than one place, guidance is provided in TGP/9 "Examining Distinctness".

### *3.3 Conditions for Conducting the Examination*

The tests should be carried out under conditions ensuring satisfactory growth for the expression of the relevant characteristics of the variety and for the conduct of the examination. In particular, it is essential that the plants produce a satisfactory crop of fruit in each of the two growing cycles.

### *3.4 Test Design*

3.4.1 For seed-propagated varieties: each test should be designed to result in a total of at least 20 plants.

3.4.2 For vegetatively propagated varieties: each test should be designed to result in a total of at least 5 plants.

### *3.5 Number of Plants / Parts of Plants to be Examined*

Unless otherwise indicated, all observations should be made on 5 plants or parts taken from each of 5 plants for vegetatively propagated varieties and 20 plants or parts taken from each of 20 plants for seed-propagated varieties.

### *3.6 Additional Tests*

Additional tests, for examining relevant characteristics, may be established.

## **4. Assessment of Distinctness, Uniformity and Stability**

### *4.1 Distinctness*

#### *4.1.1 General Recommendations*

It is of particular importance for users of these Test Guidelines to consult the General Introduction prior to making decisions regarding distinctness. However, the following points are provided for elaboration or emphasis in these Test Guidelines.

#### *4.1.2 Consistent Differences*

The differences observed between varieties may be so clear that more than one growing cycle is not necessary. In addition, in some circumstances, the influence of the environment is not such that more than a single growing cycle is required to provide assurance that the differences observed between varieties are sufficiently consistent. One means of ensuring that a difference in a characteristic, observed in a growing trial, is sufficiently consistent is to examine the characteristic in at least two independent growing cycles.

#### *4.1.3 Clear Differences*

Determining whether a difference between two varieties is clear depends on many factors, and should consider, in particular, the type of expression of the characteristic being examined, i.e. whether it is expressed in a qualitative, quantitative, or pseudo-qualitative

manner. Therefore, it is important that users of these Test Guidelines are familiar with the recommendations contained in the General Introduction prior to making decisions regarding distinctness.

#### 4.2 *Uniformity*

4.2.1 It is of particular importance for users of these Test Guidelines to consult the General Introduction prior to making decisions regarding uniformity. However, the following points are provided for elaboration or emphasis in these Test Guidelines:

4.2.2 The assessment of uniformity for seed-propagated varieties should be according to the recommendations for cross-pollinated varieties in the General Introduction.

4.2.3 For the assessment of uniformity of vegetatively propagated varieties, a population standard of 1% and an acceptance probability of at least 95% should be applied. In the case of a sample size of 5 plants, no off-types are allowed.

#### 4.3 *Stability*

4.3.1 In practice, it is not usual to perform tests of stability that produce results as certain as those of the testing of distinctness and uniformity. However, experience has demonstrated that, for many types of variety, when a variety has been shown to be uniform, it can also be considered to be stable.

4.3.2 Where appropriate, or in cases of doubt, stability may be tested, either by growing a further generation, or by testing a new seed or plant stock to ensure that it exhibits the same characteristics as those shown by the previous material supplied.

### 5. Grouping of Varieties and Organization of the Growing Trial

5.1 The selection of varieties of common knowledge to be grown in the trial with the candidate varieties and the way in which these varieties are divided into groups to facilitate the assessment of distinctness are aided by the use of grouping characteristics.

5.2 Grouping characteristics are those in which the documented states of expression, even where produced at different locations, can be used, either individually or in combination with other such characteristics: (a) to select varieties of common knowledge that can be excluded from the growing trial used for examination of distinctness; and (b) to organize the growing trial so that similar varieties are grouped together.

5.3 The following have been agreed as useful grouping characteristics:

- (a) Plant: height (characteristic 2)
- (b) Fruit: color (characteristic 16).

5.4 Guidance for the use of grouping characteristics, in the process of examining distinctness, is provided through the General Introduction.

6. Introduction to the Table of Characteristics

6.1 *Categories of Characteristics*

6.1.1 Standard Test Guidelines Characteristics

Standard Test Guidelines characteristics are those which are approved by UPOV for examination of DUS and from which members of the Union can select those suitable for their particular circumstances.

6.1.2 Asterisked Characteristics

Asterisked characteristics (denoted by \*) are those included in the Test Guidelines which are important for the international harmonization of variety descriptions and should always be examined for DUS and included in the variety description by all members of the Union, except when the state of expression of a preceding characteristic or regional environmental conditions render this inappropriate.

6.2 *States of Expression and Corresponding Notes*

States of expression are given for each characteristic to define the characteristic and to harmonize descriptions. Each state of expression is allocated a corresponding numerical note for ease of recording of data and for the production and exchange of the description.

6.3 *Types of Expression*

An explanation of the types of expression of characteristics (qualitative, quantitative and pseudo-qualitative) is provided in the General Introduction.

6.4 *Example Varieties*

Where appropriate, example varieties are provided to clarify the states of expression of each characteristic.

6.5 *Legend*

(\*) Asterisked characteristic – see Chapter 6.1.2

QL Qualitative characteristic – see Chapter 6.3

QN Quantitative characteristic – see Chapter 6.3

PQ Pseudo-qualitative characteristic – see Chapter 6.3

(a)–(d) See Explanations on the Table of Characteristics in Chapter 8.1

8. Explanations on the Table of Characteristics

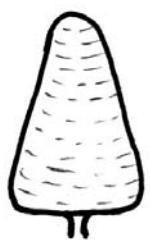

8.1 *Explanations covering several characteristics*

Characteristics containing the following key in the second column of the Table of Characteristics should be examined as indicated below:

- (a) After the second yield from the third harvest on, assessed on one main stem.
- (b) Observations should be made in summer on fully developed leaves from the middle third of a well-developed current season shoot.
- (c) Observations should be made at the time of harvest on ripe fruits unless otherwise stated.
- (d) To be observed on non-floating fruits only.
- (e) To be measured from a sample of 20 seeds.

8.2 *Explanations for individual characteristics*

Ad. 1: Plant: shape

1  
conical

2  
ellipsoid

3  
cylindrical

Ad. 3: Plant: diameter of canopy

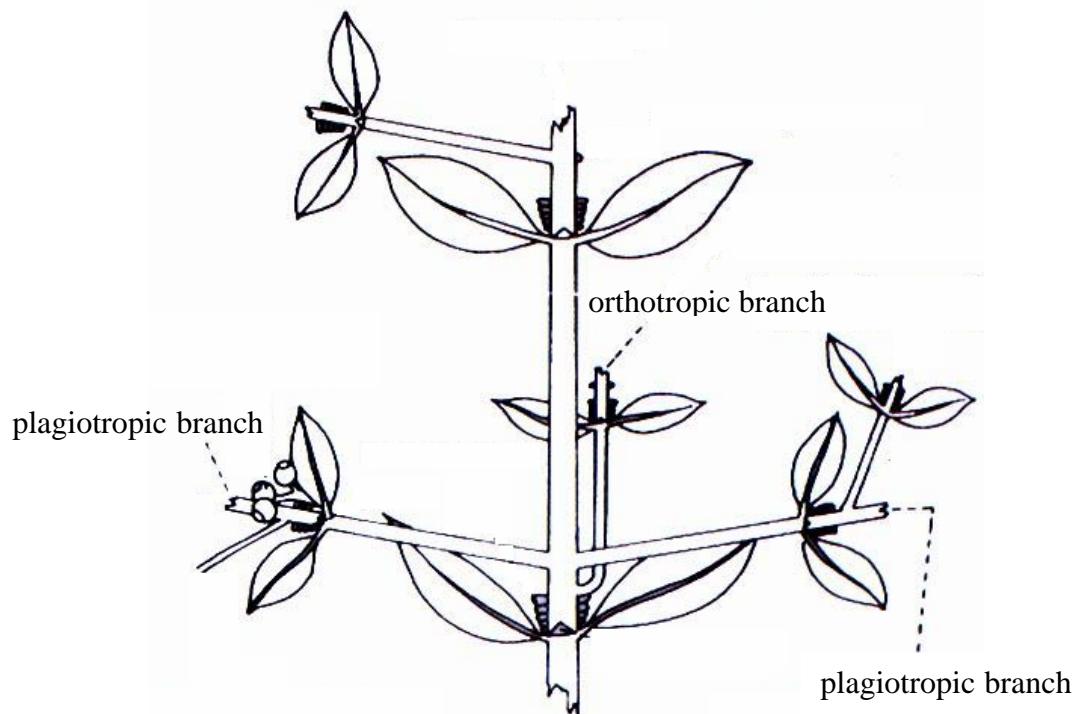

The observation should correspond to the maximum diameter.

Ad. 4: Plagiotropic primary branch: length of internode

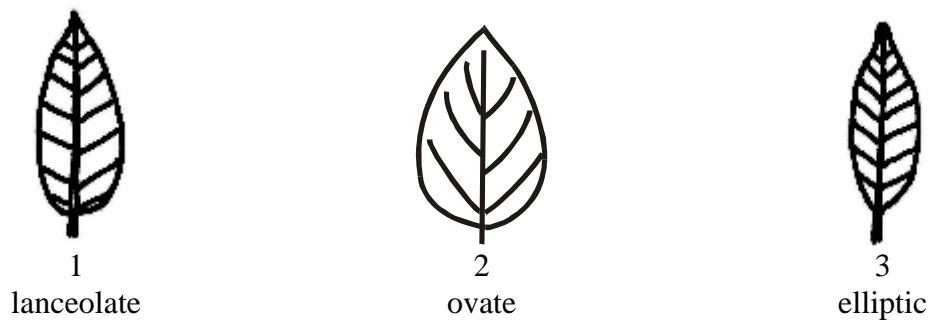

The length of the internodes should be observed in the middle third of the branch.

Plagiotropic: mode of growth of lateral branches, growing horizontally away from the leading shoot and maintaining a different morphology

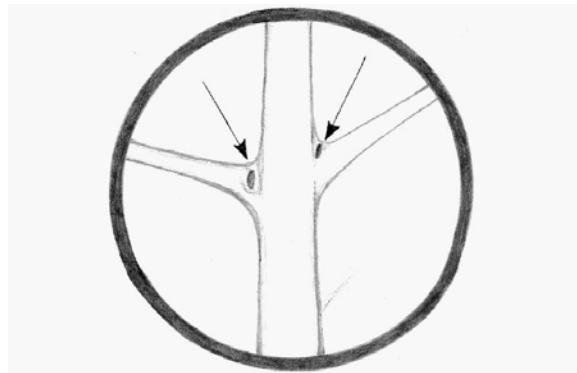

Orthotropic: mode of growth of vertical branches or leading shoots, where lateral (plagiotropic) branches may have different morphology

Ad. 8: Leaf: shape

Ad. 12: Leaf: domatia

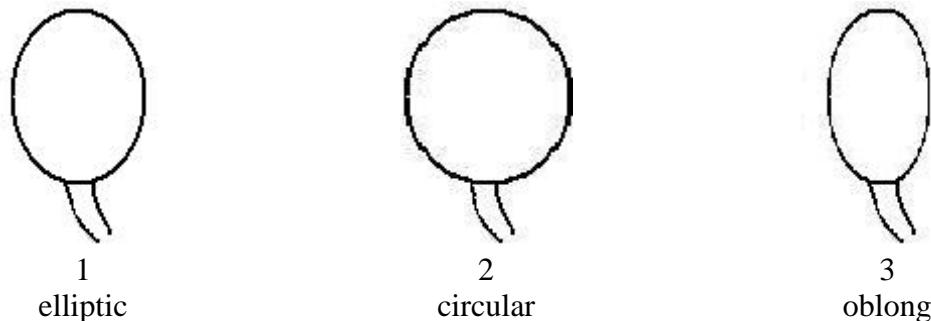

Leaf domatia are small raised structures found on the lower surface of the leaves, partly enclosed by leaf tissue or hairs, located in the axils of the veins of *Coffea arabica* L., *C. canephora* and other plants of *Rubiaceae* family.

Ad. 13: Inflorescence: number of flowers

The number of flowers per axil should be observed on the middle third of the plant on the flower bud, before anthesis.

Ad. 15: Fruit: shape

Ad. 18: Fruit: dry weight of 100 fruits

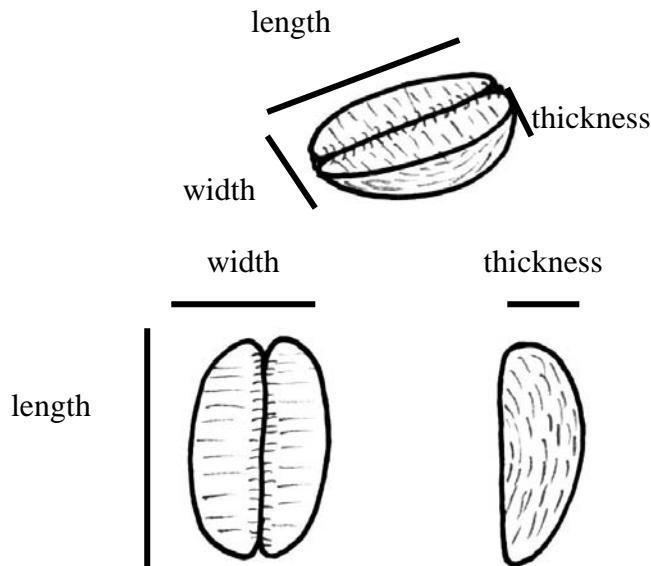

Only non-floating fruits at 12% of moisture content should be used for the observation of this characteristic.

Ad. 19: Seed length

Ad. 20: Seed width

Ad. 21: Seed length/width ratio

Ad. 22: Seed thickness

Ad. 22: Seed: thickness

The measurement should be made on flat-type seeds.

Ad. 23: Seed: weight of 100 seeds

Only non-floating fruits and flat-type seeds, excluding pea-berry seeds, should be observed. The seeds should be at 12% moisture.

Ad. 24: Period between flowering and harvesting

The time of flowering is when the greatest number of flowers are at anthesis (the main flush). The time of harvesting is when 50% of the berries from the main flush have reached mature color.

Ad. 25: Seed: caffeine content

Ad. 26: Seed: sucrose content

Ad. 27: Seed: total chlorogenic acid content

The following methods should be used:

- Caffeine content and total chlorogenic acid content:

Clifford, M.N.; Ohiokpehai, O.; Menezes, H. C., 1985: 11th International Scientific Colloquium on Coffee-ASIC. Vol. 1, pp. 252-262.

- Sucrose content:

Rogers, W. J.; Michaux, S., Bastin, M.; Bucheli, P., 1999: Changes to the content of sugars, sugar alcohols, myo-inositol, carboxilic acids and inorganic anions in developing grains from different varieties of Robusta (*Coffea canephora*) and Arabica (*Coffea arabica*) coffees. Plant Science, 149: 115-123.

The states of expression are determined as follows:

Varieties of <i>Coffea arabica</i>		% of dry weight		
	Characteristic	low	medium	high
Char. 25	Caffeine content	<0,9	0,9-1,2	>1,2
Char. 26	Sucrose content	<7,0	7,0-9,0	>9,0
Char. 27	Total Chlorogenic Acid content	<4,5	4,5-6,5	>6,5

Varieties of <i>Coffea canephora</i>		% of dry weight		
	Characteristic	low	medium	high
Char. 25	Caffeine content	<1,8	1,8-2,5	>2,5
Char. 26	Sucrose content	<4,5	4,5-7,0	>7,0
Char. 27	Total Chlorogenic Acid content	<7,0	7,0-8,0	>8,0

10. Technical Questionnaire

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
		Application date: (not to be filled in by the applicant)
<b>TECHNICAL QUESTIONNAIRE</b> to be completed in connection with an application for plant breeders' rights		
1. Subject of the Technical Questionnaire		
1.1.1 Botanical name	<i>Coffea arabica</i> L. <input type="checkbox"/>	
1.1.2 Common name	Arabica Type Coffee	
1.2.1 Botanical name	<i>Coffea canephora</i> Pierre ex A. Froehner <input type="checkbox"/>	
1.2.2 Common name	Robusta Type Coffee	
1.3.1 Botanical name	<i>Coffea arabica × C. canephora</i> <input type="checkbox"/>	
1.3.2 Common name	Interspecific Hybrid	
2. Applicant		
Name		
Address		
Telephone No.		
Fax No.		
E-mail address		
Breeder (if different from applicant)		

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

3. Proposed denomination and breeder's reference

Proposed denomination  
(if available)

Breeder's reference

#4. Information on the breeding scheme and propagation of the variety

4.1 Breeding scheme

Variety resulting from:

4.1.1 Crossing

- (a) controlled cross [ ]  
(please state parent varieties)
- (b) partially known cross [ ]  
(please state known parent variety(ies))
- (c) unknown cross [ ]

4.1.2 Mutation [ ]

(please state parent variety)

4.1.3 Discovery and development [ ]

(please state where and when discovered  
and how developed)

4.1.4 Other [ ]

(please provide details)

4.2 Method of propagating of the variety

---

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
Characteristics	Example Varieties	Note
5. Characteristics of the variety to be indicated (the number in brackets refers to the corresponding characteristic in Test Guidelines; please mark the note which best corresponds)		
<b>5.1 Plant: shape</b> <b>(1)</b>		
conical	Acaia, Laurina	1[ ]
ellipsoid	Blue Mountain, Granica, Pluma Hidalgo, Tipica	2[ ]
cylindrical	Catuaí	3[ ]
<b>5.2 Plant: height</b> <b>(2)</b>		
very short	San Ramón, Vila Lobos	1[ ]
short	IAPAR 59, Caturra	3[ ]
medium	Catuaí, Rubi, Topázio	5[ ]
tall	Bourbon	7[ ]
very tall	Acaia, Mundo Novo	9[ ]
<b>5.3 Fruit: color</b> <b>(16)</b>		
yellow	Bourbon Amarelo, Caturra Amarelo, Topázio	1[ ]
orange		2[ ]
light red	Mundo Novo, Oro Azteca, Rubi	3[ ]
<b>5.4 Period between flowering and harvesting</b> <b>(24)</b>		
very short	IAPAR 59	1[ ]
short	Bourbon	3[ ]
medium	Mundo Novo	5[ ]
long	Catuaí	7[ ]
very long	Obatã	9[ ]

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

6. Similar varieties and differences from these varieties

*Please use the table, and space provided for comments, below to provide information on how your candidate variety differs from the variety (or varieties) which, to the best of your knowledge, is (or are) most similar. This information may help the examination authority to conduct its examination of distinctness in a more efficient way.*

Denomination(s) of variety(ies) similar to your candidate variety	Characteristic(s) in which your candidate variety differs from the similar variety(ies)	Describe the expression of the characteristic(s) for the <b>similar</b> variety(ies)	Describe the expression of the characteristic(s) for <b>your</b> candidate variety
<i>Example</i>	<i>Plant: diameter of canopy</i>	<i>small</i>	<i>medium</i>

Comments:

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

#7. Additional information which may help in the examination of the variety

7.1 In addition to the information provided in sections 5 and 6, are there any additional characteristics, which may help to distinguish the variety?

Yes [ ] No [ ]

(If yes, please provide details)

7.2 Are there any special conditions for growing the variety or conducting the examination?

Yes [ ] No [ ]

(If yes, please provide details)

8. Authorization for release

(a) Does the variety require prior authorization for release under legislation concerning the protection of the environment, human and animal health?

Yes [ ] No [ ]

(b) Has such authorization been obtained?

Yes [ ] No [ ]

If the answer to (b) is yes, please attach a copy of the authorization.

TECHNICAL QUESTIONNAIRE	Page {x} of {y}	Reference Number:
-------------------------	-----------------	-------------------

9. Information on plant material to be examined or submitted for examination.

9.1 The expression of a characteristic or several characteristics of a variety may be affected by factors, such as pests and disease, chemical treatment (e.g. growth retardants or pesticides), effects of tissue culture, different rootstocks, scions taken from different growth phases of a tree, etc.

9.2 The plant material should not have undergone any treatment which would affect the expression of the characteristics of the variety, unless the competent authorities allow or request such treatment. If the plant material has undergone such treatment, full details of the treatment must be given. In this respect, please indicate below, to the best of your knowledge, if the plant material to be examined has been subjected to:

- (a) Microorganisms (e.g. virus, bacteria, phytoplasma) Yes [ ] No [ ]  
(b) Chemical treatment (e.g. growth retardant, pesticide) Yes [ ] No [ ]  
(c) Tissue culture Yes [ ] No [ ]  
(d) Other factors Yes [ ] No [ ]

Please provide details for where you have indicated "yes".

.....

10. I hereby declare that, to the best of my knowledge, the information provided in this form is correct:
